

Pandas do not spawn in bamboo jungles with Default world

[MC-240513](#) MOB SPAWNING

Status	Resolved / Fixed
Affected	21w44a; 1.18 Pre-release 1; 1.18 Pre-release 5
Fixed in	1.18 Pre-release 6
Reported	2021-11-03
Mojira category	Mob spawning

REPRODUCTION TARGET

Use version:

21w44a

Affected versions (3):

21w44a

1.18 Pre-release 1

1.18 Pre-release 5

Environment:

Minecraft: Java Edition 21w44a, vanilla single-player integrated server, fresh world with World Type set to Default. Creative mode is used as a practical aid for safe teleportation and terrain inspection; commands/cheats must be enabled. Do not use fix version 1.18 Pre-release 6.

PRECONDITIONS

- The Minecraft Launcher is configured to display historical snapshots, and the exact installation 21w44a is available.
- Use an unmodified vanilla client: disable mods, custom datapacks, and server plugins that could change biome generation, entity spawning, commands, or entity visibility.
- Create a new world directly in 21w44a; do not upgrade an existing world from another version.
- Leave the world seed blank so Minecraft selects a seed, because the report supplies no deterministic seed.
- Commands must be available to the player. In single-player, enable cheats while creating the world.
- Keep the default doMobSpawning gamerule enabled. Do not summon pandas, kill existing passive mobs, or otherwise manipulate mob spawning before the test.
- The target biome is specifically `minecraft:bamboo_jungle`, as identified by the title and the report's `locate` command; do not substitute an ordinary `minecraft:jungle` biome.

STEPS TO REPRODUCE

1 REPORT

In the Minecraft Launcher, create or select an installation whose Version field is the historical snapshot "21w44a", then launch the game with that installation. Confirm the version shown on the title screen before continuing.

INPUT 21w44a

SUCCESS CUE The Minecraft: Java Edition title screen is open and displays 21w44a.

2 INFERRED

Select Singleplayer, then select Create New World to open the world-creation screen.

SUCCESS CUE The Create New World configuration screen is visible.

3 INFERRED

Set Game Mode to Creative. Creative mode is not stated as a bug requirement; it is selected so the player can teleport above unknown terrain and descend safely without introducing survival preparation or fall damage.

SUCCESS CUE The world-creation screen shows Game Mode: Creative.

4 REPORT

Open More World Options. Set World Type to Default, ensure Allow Cheats is ON, and leave the seed field blank. Do not choose Single Biome, Amplified, Large Biomes, or another world type.

SUCCESS CUE World Type reads Default, commands are allowed, and no seed has been entered.

5 REPORT

Select Create New World and wait for world generation and player placement to finish.

SUCCESS CUE The player is controllable in the newly generated world and the nearby terrain has rendered.

6 INFERRED

Press T to open in-game chat. Enter the gamerule query exactly as shown, including the leading slash, and press Enter. Do not change any other gamerules.

INPUT /gamerule doMobSpawning

SUCCESS CUE Chat reports that doMobSpawning is true. If it is false, this world does not have the required default spawning state; set it to true before continuing or recreate the world with default settings.

7 REPORT

Press T to open chat again. Enter the report's biome-location command exactly as shown, including the leading slash, then press Enter.

INPUT /locatebiome minecraft:bamboo_jungle

SUCCESS CUE Chat reports the location of the nearest minecraft:bamboo_jungle and gives its horizontal X and Z coordinates and distance.

8 VERIFIED

Record the returned X coordinate and Z coordinate exactly, preserving any minus signs. In this affected version, `/locatebiome` identifies the target using horizontal coordinates; the teleport height will therefore be supplied separately.

SUCCESS CUE The X and Z coordinates of the located bamboo jungle have been recorded and are available for the teleport command.

9 INFERRED

Press T. Enter a teleport command using the recorded coordinates: replace `<X_FROM_LOCATEBIOME>` and `<Z_FROM_LOCATEBIOME>` with the returned integer values, omit the angle brackets, keep Y set to 200, include the leading slash, and press Enter. For example, coordinates X=-1200 and Z=640 would produce `/tp @s -1200 200 640`.

INPUT `/tp @s <X_FROM_LOCATEBIOME> 200 <Z_FROM_LOCATEBIOME>`

SUCCESS CUE The player teleports to the located X/Z position at Y=200, and target-area terrain begins rendering below or around the player.

10 INFERRED

Wait until the surrounding chunks have rendered and player movement responds normally. While in Creative flight, descend toward the terrain without dropping into Survival-style free fall. Stop above the bamboo canopy or on a safe exposed surface.

SUCCESS CUE The terrain around the located position is fully visible, movement is responsive, and dense bamboo-jungle terrain can be approached safely.

11 INFERRED

Open the debug screen with F3; on keyboards that reserve function keys, use the keyboard's equivalent such as Fn+F3. Read the biome entry and confirm that the player's current biome is `minecraft:bamboo_jungle`. If the player is immediately outside it, move horizontally toward the recorded locate position until the debug biome entry reads `minecraft:bamboo_jungle`.

INPUT F3

SUCCESS CUE The debug screen identifies the player's current biome as `minecraft:bamboo_jungle`.

12 INFERRED

Close the debug screen with F3. Move through the bamboo jungle for approximately 64 to 128 horizontal blocks at a moderate Creative-flight or walking speed, staying near enough to the surface to inspect the terrain. Avoid attacking mobs, changing time, killing entities, summoning entities, or leaving the bamboo jungle. This traversal operationalizes the report's requirement to visit the biome and allows several target-biome chunks to load.

INPUT F3

SUCCESS CUE Several bamboo-jungle chunks have rendered around the player, bamboo-covered ground is visible, and movement remains responsive.

13 **INFERRED**

Stop at a position still inside `minecraft:bamboo_jungle` and wait 60 seconds without using commands or leaving the biome. Keep the game unpaused so the integrated server continues ticking. The report does not define a waiting interval; this short interval provides a consistent opportunity for normal entity spawning before running its detection command.

SUCCESS CUE The game has remained unpaused in a fully loaded bamboo-jungle area for 60 seconds.

14 **REPORT** **TRIGGER**

Press T to open chat. Enter the report's effect command exactly as written, including the leading slash, and press Enter once. Do not add a distance restriction, change the selector, or change the duration.

INPUT `/effect give @e[type=panda] glowing 1000`

SUCCESS CUE The command has been submitted, chat now contains its execution feedback, and any panda selected by the command would receive the glowing effect.

HANDOFF TO OBSERVATION

The player is in a loaded minecraft:bamboo_jungle in a fresh Default world, and /effect give @e[type=panda] glowing 1000 has just been executed once. Hand off immediately so the observation subsystem can inspect the command feedback and the loaded biome without any further movement, commands, entity spawning, or world modification.

UNCERTAINTIES

- The report supplies no seed or fixed coordinates, so `/locatebiome` determines a different target location for each generated world.
- The report does not specify a game mode. Creative mode is selected only as a practical execution aid for commands, safe teleportation, flight, and terrain inspection.
- The report does not explicitly state single-player versus dedicated server. A fresh single-player Default world is used because no dedicated-server, multiplayer, operator/non-operator, or `server.properties` condition is supplied.
- The report does not define how much terrain must be loaded or how long the player must remain in the biome before executing the effect command. The 64-to-128-block traversal and 60-second unpaused interval are practical, bounded sampling choices rather than report-stated requirements.
- The report calls `@e[type=panda]` a check for nearby pandas, but the supplied selector contains no distance limit. The exact report command is preserved and therefore targets matching loaded entities according to command-selector behavior.
- Comments contain differing accounts of panda availability and rarity. Those claims are not converted into additional reproduction requirements.
- `Y=200` in the teleport command is a practical safety height because `/locatebiome` in the recommended affected version supplies the target's horizontal location rather than a terrain-safe destination height.
