

Illegal character '\n' in text component clickEvent

[MC-252987](#) SOCIAL INTERACTIONS

Status	Resolved / Fixed
Affected	1.19; 22w24a
Fixed in	1.19.1 Release Candidate 1
Reported	2022-06-13
Mojira category	Social Interactions

REPRODUCTION TARGET

Version: Minecraft Java Edition 1.19 release (preferred deterministic affected version; the report also lists snapshot 22w24a). Do not create the test world in a later version.

Environment: Minecraft Java Edition client running a singleplayer world through the integrated server, with cheats enabled. The report specifies no world seed, game mode, difficulty, resource pack, datapack, server, or additional player.

PRECONDITIONS

- The Minecraft Launcher can start an installation using the Java Edition 1.19 release.
- A keyboard and mouse are available; default controls are assumed below, but equivalent rebound controls may be used.
- The complete command from the report is available to paste as one line.
- When entering the command, preserve the single backslash followed by lowercase n in ``Players:\n``; do not replace it with a literal line break and do not add a second backslash.

STEPS TO REPRODUCE

1 INFERRED

In the Minecraft Launcher, select or create an installation that uses the exact Java Edition 1.19 release, then start the game with that installation.

SUCCESS CUE The main menu is open and the lower-left version label identifies the running game as Minecraft 1.19.

2 REPORT

From the main menu, select `Singleplayer`, then select `Create New World`.

SUCCESS CUE The Create New World configuration screen is open.

3 INFERRED

Open `More World Options...` and toggle `Allow Cheats` until it reads `Allow Cheats: ON`. The report does not require a particular seed, game mode, or other world setting, so leave those settings unchanged.

SUCCESS CUE The world-creation screen shows that cheats are enabled.

4 REPORT

Select `Create New World` and wait for world generation and loading to finish. Do not continue while a loading screen is visible.

SUCCESS CUE The player is standing in the singleplayer world, surrounding terrain has rendered, and normal movement and input are responsive.

5 REPORT

Press `T` to open in-game chat. Paste the report command into the chat input as one uninterrupted line. Include the leading `/`, preserve all quotation marks and backslashes exactly, and press `Enter` once to execute it.

INPUT

```
/tellraw @s [{"text":"Click me!","clickEvent":{"action":"run_command","value":"/tellraw @s [{"text":"\nPlayers:\n\n"}, {"color":"gray"}, {"selector":"@a"}]}]}
```

SUCCESS CUE The chat overlay closes after command submission and a new `Click me!` text component is visible in the chat area. No command-syntax error is shown.

6 REPORT

Press `T` again to open the full chat interface. Locate the `Click me!` line created by the preceding command; if necessary, use the chat history area rather than typing anything new.

SUCCESS CUE The chat interface is open, the mouse pointer is available, and the `Click me!` text component is visible and unobstructed.

7 INFERRED TRIGGER

Move the mouse pointer directly over the visible `Click me!` text component and left-click it exactly once. Do not click elsewhere, enter another command, or repeat the click before handing control to the observation subsystem.

INPUT Left-click `Click me!` once

SUCCESS CUE A single left-click has just been issued on the `Click me!` chat component; no further reproduction input has been performed.

HANDOFF TO OBSERVATION

The player has just left-clicked the `Click me!` text component once in the chat interface of the Minecraft Java Edition 1.19 singleplayer world. Begin observation immediately without providing further input.

UNCERTAINTIES

- The report lists both Java Edition 1.19 and snapshot 22w24a as affected but does not designate one as the preferred test version; this plan selects the stable 1.19 release.
- The report does not specify a game mode, seed, difficulty, world type, or customized controls; none are treated as required.
- The report says to `press` the text but does not explicitly name the mouse button; left-click is used as the standard activation input for a chat click event.
- No external verification was needed because the supplied report includes the exact affected versions, environment requirement, command, action order, and trigger.
