Status	Resolved / Fixed
Affected	1.19.1 Pre-release 6
Fixed in	1.19.1 Release Candidate 2
Reported	2022-07-20
Mojira category	Social Interactions

REPRODUCTION TARGET

- Version:** Minecraft Java Edition 1.19.1 Pre-release 6 (launcher version 1.19.1-pre6), the exact affected version named in the report
- Environment:** Vanilla Minecraft Java Edition client in a single-player world using the integrated server. Use a keyboard that can send the F3+B debug-key combination. Creative mode and enabled cheats are selected as practical setup choices so the supplied command can be executed without additional permission configuration.

PRECONDITIONS

- Install or make available Minecraft Java Edition 1.19.1 Pre-release 6 in the Minecraft Launcher.
- Use an unmodified client unless the supplied test environment specifically requires otherwise.
- Ensure chat is not hidden, because both the command-feedback message and the debug message must be available in chat history.
- Ensure cheats are enabled or the player otherwise has permission to execute `/tag`.
- Start with a player that does not already have the tag named `test`; a newly created world and player satisfy this condition.
- Do not clear chat between executing the command and invoking the debug function.

STEPS TO REPRODUCE

1 REPORT

In the Minecraft Launcher, select an installation that uses Minecraft Java Edition 1.19.1 Pre-release 6, and launch the game. Do not substitute 1.19.1 Release Candidate 2 or a later version.

INPUT Version: 1.19.1-pre6

SUCCESS CUE The Minecraft title screen is open and identifies the running version as 1.19.1 Pre-release 6.

2 INFERRED

From the title screen, open the single-player world-creation screen by selecting Singleplayer and then Create New World.

INPUT Singleplayer -> Create New World

SUCCESS CUE The Create New World configuration screen is visible.

3 INFERRED

Set Game Mode to Creative. Open More World Options and confirm that Allow Cheats is set to ON. No particular world seed or world-generation setting is required by the report.

INPUT Game Mode: Creative; More World Options... -> Allow Cheats: ON

SUCCESS CUE The world is configured for Creative mode and commands are permitted.

4 INFERRED

Select Create New World and wait for world generation and loading to finish.

INPUT Create New World

SUCCESS CUE The player is standing in the world, surrounding terrain has rendered, and movement responds normally.

5 INFERRED

Confirm that chat messages are visible. If chat is hidden, open the pause menu and change the chat visibility through Options, Chat Settings, Chat until it reads Shown; then return to the world.

INPUT Esc -> Options... -> Chat Settings... -> Chat: Shown -> Done -> Done -> Back to Game

SUCCESS CUE Gameplay is active again and chat visibility is set to Shown.

6 INFERRED

Press the Open Chat control, whose default key is T, so that an in-game command can be entered.

INPUT T

SUCCESS CUE The chat input field is open and has keyboard focus.

7 REPORT

Enter the report's command exactly as written, including the leading slash, and press Enter to execute it as the current player.

INPUT /tag @s add test

SUCCESS CUE The chat input closes and a command-feedback line reporting the tag operation is displayed in the chat area.

8 **REPORT**

Allow the command-feedback line to finish rendering, and leave it in chat history as the comparison system-message entry. Ensure normal gameplay has keyboard focus before continuing.

SUCCESS CUE The tag command's feedback line is retained in chat history and no menu or text-entry field is open.

9 **REPORT** **TRIGGER**

Invoke the hitbox debug function by holding F3, pressing B once, and then releasing the keys. On a keyboard where the function row controls media features, also hold the hardware Fn key as necessary. Do not repeatedly toggle the function.

INPUT F3+B (or Fn+F3+B when required by the keyboard)

SUCCESS CUE A hitbox-debug status message has been emitted to chat, and the hitbox display state has toggled once.

10 **INFERRED**

Immediately press T to open the expanded chat history so that both the earlier command-feedback line and the newly emitted debug-status line are visible for the observation subsystem. Do not enter or send any additional text.

INPUT T

SUCCESS CUE The expanded chat interface is open and contains both the tag-command feedback entry and the F3+B debug-status entry.

HANDOFF TO OBSERVATION

The F3+B debug function has just been toggled once, and the expanded chat history is open with both the prior /tag command-feedback entry and the resulting debug-status entry available for inspection. Hand control to the observation subsystem before closing or clearing chat.

UNCERTAINTIES

- The report does not specify single-player versus multiplayer, game mode, world seed, operating system, or keyboard model. A fresh Creative single-player world with cheats enabled is the simplest deterministic setup that preserves the reported actions.
- The report permits any debug function and gives F3+B as its example. This plan uses F3+B exactly to avoid selecting an unsupported alternative.
- Whether a hardware Fn modifier is required depends on the keyboard and operating-system configuration; Fn is not part of Minecraft's logical debug-key combination.
- The exact wording of the tag command feedback and hitbox debug message is not prescribed as a setup requirement, so the plan only requires that the corresponding entries be emitted and retained for inspection.
