Status	Resolved / Fixed
Affected	1.19.1 Pre-release 6
Fixed in	1.19.1 Release Candidate 2
Reported	2022-07-21
Mojira category	Social Interactions

REPRODUCTION TARGET

Version: Minecraft Java Edition 1.19.1 Pre-release 6 (the affected version; do not use 1.19.1 Release Candidate 2, which the report lists as the fix version)

Environment: A single-player Minecraft Java Edition world running 1.19.1 Pre-release 6, with commands permitted and chat visible. A new Creative-mode world is the simplest practical setup because commands are enabled automatically; the report does not require a particular game mode, seed, coordinates, or server configuration.

PRECONDITIONS

- Install and launch the exact affected version, Minecraft Java Edition 1.19.1 Pre-release 6.
- Use a world in which the player can execute commands. For the simplest deterministic setup, create a new single-player world in Creative mode; alternatively, use any world with cheats enabled or sufficient command permission.
- Ensure chat messages are visible. If necessary, open Esc -> Options -> Chat Settings and set Chat to Shown rather than Hidden.
- Use the default Take Screenshot control, F2, or determine the currently assigned Take Screenshot key under Esc -> Options -> Controls if controls have been rebound.
- Keep the game window focused and remain in normal gameplay with the HUD visible.

STEPS TO REPRODUCE

1 REPORT

From the Minecraft Launcher, start the installation/profile configured for Minecraft Java Edition 1.19.1 Pre-release 6. Do not substitute the listed fixed version, 1.19.1 Release Candidate 2.

SUCCESS CUE The main menu displays Minecraft Java Edition 1.19.1 Pre-release 6 as the running version.

2 INFERRED

Open Singleplayer and create a new world in Creative mode, or load another single-player world in which commands are permitted. If creating a world, wait for world generation and surrounding chunk loading to finish before continuing.

SUCCESS CUE The player is in a loaded world, movement responds normally, and commands can be executed.

3 INFERRED

Ensure normal chat display is enabled. If chat is hidden, press Esc, open Options, open Chat Settings, change the Chat setting to Shown, and return to the world.

SUCCESS CUE The player has returned to gameplay with chat configured to display messages.

4 INFERRED

Open the in-game chat/command entry field using the Open Chat control, which is T by default.

INPUT T

SUCCESS CUE The chat input field is open and ready to accept text.

5 REPORT

Type the report's tag command exactly as written, including the leading slash, and press Enter to execute it as the current player.

INPUT /tag @s add test

SUCCESS CUE A command feedback message appears in chat confirming execution, providing the report's system-message comparison line.

6 REPORT TRIGGER

Without leaving the world, press the Take Screenshot control once. The default key is F2; if that control has been rebound, press the key currently assigned to Take Screenshot instead.

INPUT F2

SUCCESS CUE A screenshot is saved and the screenshot feedback message has just been emitted into the in-game chat area.

HANDOFF TO OBSERVATION

The player has just pressed Take Screenshot once in Minecraft Java Edition 1.19.1 Pre-release 6, after first producing the command-feedback comparison message with `/tag @s add test`. The screenshot feedback message is now present for immediate visual inspection by the observation subsystem.

UNCERTAINTIES

- The report does not specify single-player versus multiplayer, game mode, world seed, coordinates, or a particular world. This plan uses a new Creative single-player world as the minimum deterministic way to obtain command permission without adding server dependencies.
- The report names F2 as the default Take Screenshot control but does not state whether controls were rebound; the executor should use the configured Take Screenshot binding if F2 is not assigned.
- The report does not specify non-default chat settings, so the plan explicitly uses the Shown chat setting to ensure both comparison messages are visible.
