Environment: Minecraft Java Edition release 1.4.2 in an unmodified single-player Creative-mode world. Use a disposable Superflat world so that a full-block cobblestone enclosure can be built and observed without exploration. Default keyboard and mouse controls are assumed; use the equivalent bound controls if they have been changed.

PRECONDITIONS

- Configure the Minecraft Launcher to start the exact historical release Minecraft 1.4.2, which is the first version in the report's affected-version list.
- Do not use either listed fix version, Minecraft 15w45a or Minecraft 17w47a, for this reproduction.
- Use the unmodified game without mods that alter entity movement, entity collision, chunk loading, or saving.
- The executor must be able to create a single-player world in Creative mode and use the Creative inventory.
- Keep the test world available after leaving it; the same saved world must be reopened rather than replaced with another world.

STEPS TO REPRODUCE

1 **REPORT**

Launch the launcher installation configured for the exact release Minecraft 1.4.2, and wait for the game's main menu to become responsive.

SUCCESS CUE The lower-left version text on the main menu identifies Minecraft 1.4.2, and the Singleplayer button is usable.

2 **INFERRED**

Open the single-player world list.

INPUT Click "Singleplayer".

SUCCESS CUE The Select World screen is displayed.

3 **INFERRED**

Begin creating a new disposable test world.

INPUT Click "Create New World".

SUCCESS CUE The Create New World screen is displayed.

4 **INFERRED**

Give the world a recognizable name so that the same save can be selected after quitting.

INPUT Enter "MC-2025 Reproduction" in the world-name field.

SUCCESS CUE The world-name field reads "MC-2025 Reproduction".

5 **INFERRED**

Change the world game mode to Creative so the enclosure and chickens can be created without crafting or exploration.

INPUT Click the Game Mode button until it displays "Game Mode: Creative".

SUCCESS CUE The creation screen explicitly shows Creative mode.

6 **INFERRED**

Open the additional world settings and select the Superflat world type, using the world-type button repeatedly if necessary.

INPUT

Click "More World Options...", then click the World Type button until it displays "World Type: Superflat".

SUCCESS CUE The world type is displayed as Superflat.

7 **INFERRED**

Create the world and wait until initial terrain generation and player movement have finished loading.

INPUT Click "Create New World".

SUCCESS CUE The player is standing in the new world, nearby terrain is rendered, and movement responds normally.

8 **INFERRED**

Open the Creative inventory.

INPUT Press E using the default controls.

SUCCESS CUE The Creative inventory interface is open and item tabs are visible.

9 **REPORT**

Locate the full cobblestone building block, not a cobblestone wall item, and place a stack in an empty hotbar slot. The hotbar is the row of nine item slots at the bottom of the inventory and gameplay screen.

SUCCESS CUE A stack of ordinary full-block cobblestone is present in the hotbar.

10 **REPORT**

Locate the spawn egg whose tooltip identifies that it spawns a chicken, and place it in a different hotbar slot.

SUCCESS CUE A chicken-spawning egg is present in the hotbar alongside the cobblestone.

11 **INFERRED**

Close the Creative inventory and select the hotbar slot containing cobblestone.

INPUT

Press E, then press the number key corresponding to the cobblestone hotbar slot or use the mouse wheel to select it.

SUCCESS CUE The inventory is closed, cobblestone is shown in the player's hand, and its hotbar slot is highlighted.

12 **INFERRED**

Build a level 8-by-8 floor made entirely from full cobblestone blocks. Keep all floor blocks at the same Y level.

INPUT Right-click to place each cobblestone block.

SUCCESS CUE A complete solid 8-by-8 cobblestone floor is present with no holes.

13 **REPORT**

Build a two-block-high cobblestone wall around the entire outer perimeter of the 8-by-8 floor. Place the first wall layer on top of the floor's perimeter blocks and the second wall layer directly above it. Leave the top open and do not add a doorway. This creates a 6-by-6 interior with two blocks of vertical clearance.

INPUT

Right-click to place cobblestone around the perimeter, then repeat directly above the first perimeter layer.

SUCCESS CUE The enclosure has a solid 6-by-6 interior floor, an unbroken two-full-block-high cobblestone perimeter, and an open top.

14 **INFERRED**

Move into or hover directly above the enclosure, then select the hotbar slot containing the chicken-spawning egg.

INPUT

Press the number key corresponding to the chicken spawn egg or use the mouse wheel to select it.

SUCCESS CUE The chicken-spawning egg is in the player's hand and the crosshair can target the enclosure's interior floor.

15 **REPORT**

Spawn exactly 10 chickens inside the enclosure, distributing the clicks over the interior floor so that every chicken appears inside the walls.

INPUT Right-click an interior floor block 10 times in total.

SUCCESS CUE Ten chickens are present inside the enclosure, with none intentionally spawned on top of or outside the perimeter.

16 **INFERRED**

Select an empty hotbar slot so that subsequent clicks or movement do not spawn additional chickens or place blocks.

INPUT Press the number key for an empty hotbar slot.

SUCCESS CUE The active hotbar slot is empty and neither cobblestone nor the spawn egg is held.

17 **INFERRED**

Enter Creative flight and hover over the center of the enclosure, approximately four to six blocks above its interior floor, while looking down at the chickens.

INPUT

Double-tap Space to begin flying; use Space to rise and the movement controls to center over the enclosure.

SUCCESS CUE The player is stationary above the open enclosure and all or most of its interior can be seen without the player physically pushing the chickens.

18 **REPORT**

Allow the chickens to move naturally for up to five minutes while watching for at least one chicken to gather against an inside wall or corner. Continue as soon as a chicken is pressed tightly against the inside face of a cobblestone wall; do not wait the full five minutes if that state is reached earlier.

SUCCESS CUE At least one chicken is visibly touching or pressed tightly against the inner face or corner of the cobblestone wall.

19 **INFERRED**

If no chicken becomes tightly wall-adjacent during the waiting period, descend into the enclosure and gently herd several chickens toward the same inside corner by walking slowly behind them. Use only player-body collision: do not left-click, attack, sprint, place blocks, or remove blocks. If step 18 already achieved the required wall-adjacent state, make no input and proceed.

INPUT Use the normal movement keys, including W as needed; do not left-click.

SUCCESS CUE At least one living chicken is pressed tightly against the inner face or corner of the solid cobblestone wall, and the enclosure remains intact.

20 **INFERRED**

Move back above the enclosure in Creative flight and verify that at least one chicken is still adjacent to an inside wall or corner. Keep the enclosure in view so that the same area will be immediately visible after reloading.

INPUT

Double-tap Space if flight was exited, then use Space and the movement controls to hover over the enclosure.

SUCCESS CUE The player is hovering above the enclosure, the enclosure is visible below, and at least one chicken remains against an inside wall or corner.

21 **REPORT**

Save the current entity positions and leave the world while the chickens are in this wall-adjacent arrangement.

INPUT Press Esc, then click "Save and Quit to Title".

SUCCESS CUE The main menu is displayed, confirming that the test world has been saved and closed.

22 **INFERRED**

Return to the single-player world list.

INPUT Click "Singleplayer".

SUCCESS CUE The Select World screen is displayed and the saved "MC-2025 Reproduction" world is listed.

23 **REPORT**

Select the same saved test world; do not create a replacement world.

INPUT Click the world named "MC-2025 Reproduction" once.

SUCCESS CUE The "MC-2025 Reproduction" entry is highlighted as the world that will be loaded.

24 **REPORT** **TRIGGER**

Load the selected saved world once. This is the trigger action because it reloads the chunk containing the saved, wall-adjacent chickens.

INPUT

Click "Play Selected" or double-click the highlighted "MC-2025 Reproduction" world entry.

SUCCESS CUE The loading screen transitions back to gameplay in the same saved world.

25 **INFERRED**

Make no movement or interaction input after entering the world. Wait only until the enclosure and chickens have rendered sufficiently for observation; do not perform another save-and-reload cycle before handing off.

SUCCESS CUE The saved enclosure and its chickens are visible, the chunk has rendered, and the player has not moved or interacted since the world opened.

HANDOFF TO OBSERVATION

The same saved Minecraft 1.4.2 world has just been reopened once, the chunk containing the solid cobblestone enclosure has rendered, and the player remains positioned to view the chickens without making post-load movement or interaction inputs. Begin observing the chickens' positions and state relative to the enclosure walls.

UNCERTAINTIES

- The report has no single formal Steps to Reproduce section. This plan reconstructs the minimum path primarily from Comment 54, which specifies a 6x6x2 cobblestone/stone room, approximately 10 chickens, closing the map, and loading the map, with support from Comments 56 and 100 describing save-and-reload reproduction.
- The phrase "6x6x2 room" is interpreted as a 6-by-6 interior enclosed by two-block-high full cobblestone walls with an open top. The report does not explicitly state whether those dimensions include the wall thickness.
- The issue is described as probabilistic. Some comments recommend reloading multiple times, but this plan performs only one load trigger and hands off immediately, in accordance with the requirement not to repeat a trigger merely to exaggerate the issue.
- The optional gentle herding step is a practical method for establishing the report's stated condition that a mob is directly next to or partly pressing into a block before saving. It is not asserted as a mandatory cause by the report.
- The report covers many mobs and enclosure materials. Chickens and full cobblestone blocks were selected because Comment 54 supplies that specific reproduction variant; cobblestone wall blocks and wooden fences are not used in this variant.
