

Warden despawns when far away

[MC-249664](#) MOB BEHAVIOUR

Status	Resolved / Fixed
Affected	22w12a; 22w13a; 22w14a; 22w15a; 22w16a; 22w17a; 22w18a
Fixed in	22w15a; 22w19a
Reported	2022-03-28
Mojira category	Mob behaviour

REPRODUCTION TARGET

Use version: 22w12a

Affected versions (7):

22w12a

22w13a

22w14a

22w15a

22w16a

22w17a

22w18a

Environment:

Minecraft Java Edition snapshot 22w12a in a new single-player world. Use Creative mode with commands enabled, a non-Peaceful difficulty such as Normal, and an open area with solid level ground. A Superflat world is recommended as a practical way to provide unobstructed terrain. Set Simulation Distance to at least 10 chunks so the Warden's chunk can continue ticking when the player is 130 blocks away.

PRECONDITIONS

- Launch the game using Java Edition snapshot 22w12a, the first version listed as affected.
- Use a new single-player world so no second player remains close enough to affect distance-based mob despawning.
- Enable commands when creating the world. Creative mode is recommended so the Warden cannot interrupt command entry by killing the player.
- Set the difficulty to Normal or another non-Peaceful difficulty.
- Set Simulation Distance to 10 chunks or greater before summoning the Warden.
- Use an open location with solid, level ground and at least three blocks of vertical clearance.
- Ensure there is no existing Warden near the test location.
- Perform the summon and teleport sequence promptly; do not intentionally wait for the Warden's ordinary inactivity-based digging sequence.

STEPS TO REPRODUCE

1 REPORT

In the Minecraft Launcher, create or select an installation for snapshot 22w12a, start it, and wait for the main menu.

SUCCESS CUE The Minecraft Java Edition main menu is displayed and identifies the running version as 22w12a.

2 INFERRED

Select Singleplayer, choose Create New World, set Game Mode to Creative, enable commands or Allow Cheats, and create the world. A Superflat world may be selected under More World Options to provide a simple open test area.

SUCCESS CUE The player is in a new single-player Creative world and can open chat and execute commands.

3 INFERRED

Open the pause menu with Esc, open Options, and set Difficulty to Normal if the world is currently on Peaceful.

SUCCESS CUE The displayed difficulty is Normal or another non-Peaceful setting.

4 INFERRED

From Options, open Video Settings and set Simulation Distance to at least 10 chunks. Return to the game after applying the setting.

SUCCESS CUE Simulation Distance is 10 chunks or greater and the player has returned to normal gameplay.

5 INFERRED

Wait until the world finishes loading, then stand on solid, level ground in an open area. Do not stand in water, over a drop, or beside a hazard that could move or damage the Warden while the player is away.

SUCCESS CUE Nearby chunks are rendered, movement responds normally, and there is sufficient unobstructed space for a Warden at the player's position.

6 INFERRED

Press T, or the rebound Open Chat control, to open in-game chat.

SUCCESS CUE The chat command-entry field is active.

7 VERIFIED

Enter the summon command exactly as shown, including the leading slash, and press Enter. Do not add NBT such as PersistenceRequired, NoAI, or a custom name.

INPUT `/summon minecraft:warden ~ ~ ~`

SUCCESS CUE The command is accepted without a red syntax error and one Warden is present at the player's current location.

8 INFERRED

As soon as the Warden has appeared, press T to open chat again. Avoid walking away manually or spending time interacting with the Warden.

SUCCESS CUE Chat is open while the player is still at the location where the Warden was summoned.

9 **REPORT** **TRIGGER**

Enter the report's first teleport command exactly as shown, including the leading slash, and press Enter. The relative X coordinate moves the player 130 blocks in the negative X direction; the final two arguments set yaw to -90 and pitch to 0.

INPUT `/tp @s ~-130 ~ ~ -90 0`

SUCCESS CUE The command succeeds and the player is now 130 blocks west of the Warden's summon location, facing at yaw -90 with level pitch.

10 **INFERRED**

Allow approximately one second of normal game time to pass so the teleport completes and entities receive game ticks. Do not remain away for an extended period.

SUCCESS CUE Player movement and commands respond normally at the distant location; no more than a brief interval has elapsed.

11 **INFERRED**

Press T to open chat while remaining at the distant location.

SUCCESS CUE The chat command-entry field is active and the player has not moved manually from the teleported position.

12 **REPORT**

Enter the report's return teleport command exactly as shown, including the leading slash, and press Enter. This reverses the earlier relative X displacement and returns the player to the Warden's summon location.

INPUT `/tp @s ~130 ~ ~ -90 0`

SUCCESS CUE The command succeeds and the player is back at the original summon coordinates, facing at yaw -90 with level pitch.

13 **INFERRED**

Close chat if it remains visible and wait only until the chunks around the original location have rendered and camera movement responds normally. Do not perform any additional commands, summon another Warden, or leave the location.

SUCCESS CUE The player is at the original Warden summon location, surrounding terrain is rendered, and the scene is ready for immediate inspection without yet evaluating the bug outcome.

HANDOFF TO OBSERVATION

The player has crossed to 130 blocks from the summoned Warden in step 9, briefly allowed entity ticking, and has now returned to the exact summon location in step 12. The original area is rendered and ready for the observation subsystem to inspect the Warden's state.

UNCERTAINTIES

- The report does not specify a world seed, terrain type, game mode, difficulty, or single-player versus multiplayer requirement. A new single-player Creative Superflat world on Normal difficulty is selected as the simplest controlled implementation.
- The report says only “Summon a warden” and does not provide an exact summon command. The plan uses `/summon minecraft:warden ~ ~ ~`` without NBT as the deterministic implementation; adding persistence-related NBT would alter the reported test condition.
- The report does not specify Simulation Distance. At least 10 chunks is selected as a practical safeguard so the original location can remain entity-ticking at a 130-block separation.
- The report also describes a randomized variant at a distance of 48 blocks. That variant is not used because the supplied 130-block path is shorter and intended to reproduce immediately rather than depend on random despawn timing.
- 22w15a appears in both the report's affected-version list and fix-version list. It is retained in `affected_versions` exactly as supplied, while 22w12a remains the recommended version because it is the first listed affected version.
