1.21.5

Environment: Minecraft Java Edition using the exact affected version Minecraft 1.9 Pre-Release 1. Use a single-player Creative-mode world as a deterministic way to obtain a horse and saddle. Perform the trigger on unobstructed, level ground with enough room for the horse to jump and land. The report does not require multiplayer, a particular seed, commands, or cheats.

PRECONDITIONS

- The exact Minecraft Java Edition version Minecraft 1.9 Pre-Release 1 is installed and launchable.
- Default controls are assumed: E opens the inventory, Space is Jump, and Left Shift is Sneak/Dismount. If controls are rebound, use the keys assigned to those actions instead.
- A mouse or equivalent input is available for right-click interactions.
- The world contains an unobstructed patch of level, solid ground with no low ceiling or nearby drop that could interfere with the horse's jump or landing.
- The reproduction requires an adult horse that has been tamed and equipped with a saddle before the timing-sensitive trigger is attempted.

STEPS TO REPRODUCE

1 **REPORT**

Launch the Minecraft Java Edition installation for the first listed affected version. Do not use either listed fix version for this reproduction.

INPUT Select and launch "Minecraft 1.9 Pre-Release 1" in the Minecraft Launcher.

SUCCESS CUE The Minecraft main menu has loaded and displays the selected affected version.

2 **INFERRED**

Create a single-player Creative-mode world. No particular seed or world-generation setting is required. After entering the world, wait for nearby terrain to render and for movement and inventory input to respond normally.

INPUT Singleplayer -> Create New World -> Game Mode: Creative -> Create New World

SUCCESS CUE The player is standing in a loaded Creative-mode world and can move without chunk-loading interruption.

3 **INFERRED**

Locate an unobstructed area of level, solid ground. Move away from trees, walls, pits, water, and low overhead blocks so the horse will have room to jump and land normally.

INPUT Use W/A/S/D and the mouse to move to and inspect a clear area.

SUCCESS CUE Several blocks of flat, solid ground are clear around the player, including open air above the intended horse position.

4 **INFERRED**

Open the Creative inventory and obtain a Horse Spawn Egg. Use the Search Items tab if necessary, then place the spawn egg into an available hotbar slot. The hotbar is the row of nine item slots at the bottom of the screen.

INPUT

Press E; select Search Items; search for "horse"; move the Horse Spawn Egg to the hotbar.

SUCCESS CUE A Horse Spawn Egg is visible in one of the nine hotbar slots.

5 **INFERRED**

While the Creative inventory is still open, obtain a Saddle and place it into another available hotbar slot.

INPUT In Search Items, search for "saddle"; move the Saddle to the hotbar.

SUCCESS CUE Both a Horse Spawn Egg and a Saddle are present in the hotbar.

6 **INFERRED**

Close the inventory, select the Horse Spawn Egg in the hotbar, aim at the clear ground, and use the egg to spawn a horse. Use an adult horse; if the spawned entity is not a suitable adult horse, spawn another on the clear ground and use the adult horse.

INPUT

Press E to close the inventory; select the Horse Spawn Egg with the corresponding number key or mouse wheel; right-click the ground.

SUCCESS CUE An adult horse is standing on the unobstructed ground near the player.

7 **INFERRED**

Prepare to tame the horse without accidentally using an item on it. Select an empty hotbar slot so the player's hand is empty.

INPUT Press the number key for an empty hotbar slot or scroll to one.

SUCCESS CUE The active hotbar slot is empty and the player's hand contains no item.

8 **INFERRED**

Mount the adult horse by aiming the crosshair at its body and using the interaction control.

INPUT Right-click the horse with an empty hand.

SUCCESS CUE The viewpoint is positioned on the horse, indicating that the player has mounted it.

9 **REPORT**

Complete the taming process. If the untamed horse throws the player off, approach it and right-click it with an empty hand again. Repeat only until the horse accepts the rider and the taming heart particles appear.

INPUT After each forced dismount, right-click the horse again with an empty hand.

SUCCESS CUE Heart particles have appeared and the horse no longer immediately throws the player off, confirming that it is tamed.

10 **INFERRED**

While mounted on the tamed horse, open the horse inventory. This interface includes the player's inventory and the horse's equipment slots.

INPUT Press E while mounted.

SUCCESS CUE The horse inventory interface is open and its saddle equipment slot is visible.

11 **REPORT**

Equip the horse with the Saddle obtained earlier. Move the Saddle from the hotbar or player inventory into the horse's saddle equipment slot.

INPUT Left-click the Saddle, then left-click the horse's saddle slot.

SUCCESS CUE The Saddle is displayed in the horse's saddle slot and appears on the horse model.

12 **REPORT**

Close the horse inventory. If closing the interface leaves the player mounted, remain mounted. If the player is not mounted, aim at the saddled horse and right-click it to start riding.

INPUT Press E to close the interface; if necessary, right-click the saddled horse.

SUCCESS CUE The player is riding the tamed, saddled horse and the horse can be controlled by the player.

13 **INFERRED**

Position the mounted horse on the prepared level ground and bring it to a complete stop. Ensure there is still open space above and around it.

INPUT Use W/A/S/D as needed, then release all movement keys.

SUCCESS CUE The mounted horse is stationary on level, solid ground with an unobstructed landing area.

14 **REPORT**

Begin charging a horse jump by pressing and holding the Jump control. Continue holding until the horse jump-charge meter has visibly risen; a maximum-strength charge is not required.

INPUT Press and hold Space.

SUCCESS CUE The horse jump-charge meter is visible and has accumulated charge while the player remains mounted.

15 **REPORT** **TRIGGER**

Trigger the test by releasing the Jump control and pressing the Dismount control at the same moment. For automated input, issue the Space key-up event and Left Shift key-down event in the same client frame or simulation tick. Release Left Shift after the player has dismounted.

INPUT

Release Space and press Left Shift simultaneously; then release Left Shift once dismounted.

SUCCESS CUE The charged jump has been released and the player has dismounted at the start of the horse's jump, with the horse beginning the jump or already airborne.

HANDOFF TO OBSERVATION

The player has just released the charged horse jump and dismounted in the same moment, while the horse is beginning the jump or is airborne above the prepared level ground. Hand control to the observation subsystem immediately so it can watch the horse through its landing and subsequent movement.

UNCERTAINTIES

- The report does not specify a required game mode, world seed, world type, or multiplayer environment. Creative-mode single player is used only as a practical, deterministic resource-acquisition setup.
- Manual horse taming can require a variable number of mounting attempts. Continue only until heart particles confirm that the adult horse is tamed.
- The trigger is timing-sensitive. The report requires releasing Space and pressing Shift at the same time; inputs separated across multiple client frames may not reproduce the intended condition.
- The plan uses a Horse Spawn Egg because the report does not provide a seed, coordinates, or command for locating a horse. This is a setup convenience rather than a reported reproduction requirement.
