Environment:

Unmodified Minecraft: Java Edition 1.4.2 in a local single-player Creative-mode world on Normal difficulty, using any seed. The test is performed at an active Nether portal in the Overworld. Because the report's supplied /summon command is unavailable in this historical version, a version-compatible Spider Spawn Egg is used to obtain the required spider jockey.

PRECONDITIONS

- The launcher must have a Java Edition 1.4.2 installation available.
- Use a disposable world because the procedure requires Nether generation, an active portal, hostile mobs, and repeated spawn-egg attempts.
- Use Creative mode so Obsidian, Flint and Steel, a Spider Spawn Egg, building blocks, and a weapon can be obtained without unrelated crafting or exploration.
- Set difficulty to Easy, Normal, or Hard; the plan uses Normal. Do not use Peaceful because the spider and skeleton must remain present.
- Use default controls or their rebound equivalents: E for inventory, W for forward movement, number keys 1–9 for hotbar selection, left-click to attack, and right-click to place or use an item.
- Provide an opaque roof over the test lane so a skeleton rider obtained during daytime does not burn before the portal interaction.
- Do not execute the report's supplied command in 1.4.2. Preserve it for reference exactly as reported:
`/summon minecraft:spider ~ ~ ~ {Passengers:[{id:"minecraft:skeleton",HandItems:[{id:"minecraft:bow",Count:1b}]}}}`

STEPS TO REPRODUCE

1 REPORT

In the Minecraft Launcher, create or select an installation for Java Edition 1.4.2 and start it. Do not select the listed fix version 24w21a or any other version.

INPUT Minecraft 1.4.2

SUCCESS CUE The Minecraft title screen is open and identifies the running version as 1.4.2.

2 INFERRED

Select Singleplayer, choose Create New World, set Game Mode to Creative, leave the seed unspecified, and create the world. Wait until terrain has rendered and movement responds normally.

INPUT Singleplayer -> Create New World -> Game Mode: Creative -> Create New World

SUCCESS CUE The player is standing in a loaded Overworld area and can fly and break blocks immediately, confirming Creative mode.

3 INFERRED

Open the pause menu with Esc, select Options, and set Difficulty to Normal. Return to the world.

INPUT Esc -> Options -> Difficulty: Normal -> Done -> Back to Game

SUCCESS CUE The world is active again with the difficulty control set to Normal rather than Peaceful.

4 INFERRED

Press E to open the Creative inventory. Obtain Obsidian, Flint and Steel, a Spider Spawn Egg, an opaque building block such as Stone, and a Diamond Sword. Put them into separate hotbar slots by clicking them or by hovering over each item and pressing a number key from 1 through 9. Close the inventory with E.

INPUT E; Obsidian; Flint and Steel; Spider Spawn Egg; Stone; Diamond Sword; E

SUCCESS CUE The required five items are visible in separate slots in the nine-slot hotbar at the bottom of the screen.

5 INFERRED

Choose a flat, open Overworld location with at least nine blocks of clear horizontal space. Using the opaque building blocks, construct a roof at least five blocks above the floor that covers the future portal opening and a test lane extending at least five blocks in front of it. Keep the floor and sides of the lane unobstructed so the spider jockey can be pushed. The roof is only a protective canopy; do not block the portal opening.

INPUT Select Stone or another opaque block; right-click to place blocks

SUCCESS CUE A shaded, unobstructed area exists beneath an opaque roof, with enough room for a five-block-tall portal and a spider jockey.

6 REPORT

Under the canopy, select Obsidian and build a vertical rectangular Nether portal frame. Make the outer rectangle four blocks wide and five blocks tall, leaving a two-block-wide by three-block-tall empty opening. A full frame uses four Obsidian across the bottom, three additional Obsidian above each bottom corner for the two sides, and four Obsidian across the top.

INPUT Select Obsidian; right-click to place a 4-by-5 outer frame

SUCCESS CUE A complete upright Obsidian rectangle surrounds an empty opening two blocks wide and three blocks tall.

7 **REPORT**

Select Flint and Steel. Aim at an exposed interior face of the Obsidian along the bottom of the empty opening and right-click once to ignite the frame.

INPUT Select Flint and Steel; right-click inside the frame

SUCCESS CUE The entire two-by-three interior is filled with animated purple Nether portal blocks.

8 **REPORT**

With no entity being ridden, walk into the purple portal opening. Remain inside it until dimension loading begins. Do not provide movement input during loading, then wait until the Nether terrain and the destination portal have rendered and movement responds normally.

INPUT W

SUCCESS CUE The player is in the Nether beside an active purple Nether portal, surrounding chunks are rendered, and movement is responsive.

9 **REPORT**

Walk back into the active Nether-side portal and remain in it until the return transfer starts. After loading, wait for Overworld chunks and the active return portal to render fully.

INPUT W

SUCCESS CUE The player is back in the Overworld beside an active portal, with the covered test lane available and movement responsive.

10 **VERIFIED**

Return to the roofed side of the Overworld portal. Select the Spider Spawn Egg in the hotbar and stand three to five blocks directly in front of the portal opening, leaving a straight route between the target spawn position and the purple portal field.

INPUT Select the Spider Spawn Egg hotbar slot

SUCCESS CUE The Spider Spawn Egg is held in the active hotbar slot, and the crosshair points at a floor block beneath the protective roof.

11 **VERIFIED**

Right-click the floor once to spawn one spider and inspect it immediately. If it is an ordinary spider without a skeleton riding it, select the Diamond Sword, kill only that spider, reselect the Spider Spawn Egg, and repeat this single-spawn process. Stop immediately when one use produces a spider with a skeleton visibly seated on its back. Spider spawn eggs in Java Edition 1.4.2 can produce a spider jockey, but the result is random. ([minecraft.wiki](https://minecraft.wiki/w/Spider_Jockey?mobile-app=true&theme=false&utm_source=openai))

INPUT

Right-click once per spawn attempt; left-click with the Diamond Sword only to remove an ordinary spider

SUCCESS CUE One living spider jockey is present beneath the roof: a skeleton is visibly seated on a spider, and no unnecessary ordinary spiders obstruct the lane.

12 **INFERRED**

Select an empty hotbar slot so an empty hand is shown and accidental clicks will not strike the entities. Without attacking either entity, use player-body collision by walking into the spider from the side or rear until the intact spider jockey is positioned directly in front of and aligned with the two-block-wide portal opening. Keep the skeleton mounted on the spider throughout positioning.

INPUT Select an empty hotbar slot; use W and directional movement controls

SUCCESS CUE The living spider and its mounted skeleton remain stacked together on the Overworld side, directly aligned with the active purple portal opening.

13 **REPORT** **TRIGGER**

Stand behind the aligned spider jockey, on the side opposite the portal. Walk forward into the spider and continue applying body collision until the spider's body is centered within and visibly intersects the active purple portal blocks. Do not attack, break the portal, enter the portal yourself, or separate the skeleton from the spider. Stop input as soon as the intact mounted pair is inside the portal field.

INPUT

Hold W until the intact spider jockey intersects the purple portal blocks, then release W

SUCCESS CUE The spider and its skeleton passenger are still visibly mounted together and have just been pushed into the active Overworld-side Nether portal field.

HANDOFF TO OBSERVATION

The intact spider-and-skeleton stack has just been forced into the active purple Nether portal blocks on the Overworld side, both entities are still mounted together, and the local chunk is responsive. Hand control immediately to the observation subsystem without moving, attacking, dismounting the passenger, or disrupting the portal.

UNCERTAINTIES

- The first listed affected version, Minecraft 1.4.2, is required as recommended_version by version-selection policy, but the report's supplied /summon command cannot be executed there because /summon was added during the Java Edition 1.7.2 development cycle. The exact report command has therefore been preserved in preconditions but replaced operationally with the 1.4.2 Spider Spawn Egg method.
([zh.minecraft.wiki](https://zh.minecraft.wiki/w/Java%E7%89%881.7.2?utm_source=openai))
- Obtaining the spider jockey in 1.4.2 is nondeterministic. The Spider Spawn Egg gained a chance to create a spider jockey in 1.4.2, and naturally/spawn-egg-created spider jockeys occur only occasionally; the executor may therefore need multiple isolated attempts. Stop as soon as the first valid jockey appears.
([minecraft.wiki](https://minecraft.wiki/w/Spider_Jockey?mobile-app=true&theme=false&utm_source=openai))
- The report does not specify game mode, world seed, difficulty, single-player versus dedicated server, portal coordinates, or portal orientation. Creative mode, Normal difficulty, single-player, any seed, and a simple standard portal are practical execution choices rather than asserted bug requirements.
- The generated Nether-side portal can be displaced from the exact coordinate-corresponding location by normal portal linking. This does not alter the report's required sequence as long as the player uses the generated active portal to return to the prepared Overworld test area.
