

Frogs don't play their walking animation when they take damage

MC-254074 PARITY

Status	Resolved / Fixed
Affected	1.19; 1.19.1 Pre-release 4; 1.19.1 Release Candidate 2; 1.19.1; 1.19.2; 22w42a; 22w44a; 1.19.3 Pre-release 1; 1.19.3 Pre-release 2; 1.19.3 Pre-release 3; 1.19.3 Release Candidate 1; 1.19.3 Release Candidate 3; 1.19.3; 23w04a
Fixed in	23w05a
Reported	2022-07-10
Mojira category	Mob behaviour; Parity

REPRODUCTION TARGET

Use version: 1.19

Affected versions (14):

1.19

1.19.1 Pre-release 4

1.19.1 Release Candidate 2

1.19.1

1.19.2

22w42a

22w44a

1.19.3 Pre-release 1

1.19.3 Pre-release 2

1.19.3 Pre-release 3

1.19.3 Release Candidate 1

1.19.3 Release Candidate 3

1.19.3

23w04a

Environment:

Minecraft Java Edition 1.19 in a single-player Creative-mode world. Use an unobstructed, well-lit area with default or equivalent controls. No particular seed, biome, difficulty, coordinates, server configuration, or graphics setting is specified by the report.

PRECONDITIONS

- Launch the exact affected Java Edition version 1.19, not fix version 23w05a or a later version.
- Use a world in which a magma block and a frog can be placed deterministically. Creative mode is recommended because the report does not require Survival mode and Creative inventory provides both items without unrelated crafting or exploration.
- Locate a dry, level, unobstructed area where the entire frog can be kept in view.
- Ensure surrounding terrain has finished rendering and player movement and inventory interactions respond normally.
- Use a single magma block as stated in the report; do not apply NoAI, resistance, invulnerability, or other entity data that could alter the frog's normal damage response or animation state.

STEPS TO REPRODUCE

1 REPORT

In the Minecraft Launcher, select Minecraft: Java Edition version 1.19 and start the game. Do not select 23w05a, because that is listed as the fix version rather than an affected version.

INPUT Select installation/version 1.19, then choose Play.

SUCCESS CUE The Minecraft main menu is open and identifies the running version as 1.19.

2 INFERRED

Create a new single-player Creative-mode world, or load an existing disposable Creative-mode world. For a new world, open Singleplayer, choose Create New World, cycle the game mode until it reads Creative, and create the world. Leave the seed and other settings at any values because the report provides no required world configuration.

INPUT Singleplayer -> Create New World -> Game Mode: Creative -> Create New World

SUCCESS CUE The player is in a loaded world and has access to the Creative inventory.

3 INFERRED

Wait for initial world loading to finish, then move to a dry, level location with several unobstructed blocks around it. Do not continue while nearby terrain is still appearing or player movement is unresponsive.

INPUT Use the normal movement controls; defaults are W, A, S, and D.

SUCCESS CUE The surrounding terrain is rendered, movement responds normally, and there is a clear ground block on which the test block can be placed.

4 INFERRED

Open the Creative inventory, select the Search Items tab if necessary, search for "Magma Block," and move one Magma Block into an empty hotbar slot. The hotbar is the row of nine item slots at the bottom of the screen.

INPUT Press E; search for "Magma Block"; left-click or drag Magma Block into a hotbar slot.

SUCCESS CUE A Magma Block is present in one of the nine hotbar slots.

5 REPORT

Close the inventory, select the hotbar slot containing the Magma Block, aim at the top face of a solid ground block in the clear test area, and place exactly one Magma Block.

INPUT

Press E to close the inventory; select the relevant hotbar slot using keys 1-9 or the mouse wheel; right-click the target ground block.

SUCCESS CUE One Magma Block is visible in the test area with its top face exposed and no block occupying the space directly above it.

6 INFERRED

Open the Creative inventory again, use Search Items to find "Frog Spawn Egg," and move one Frog Spawn Egg into an empty hotbar slot.

INPUT

Press E; search for "Frog Spawn Egg"; left-click or drag Frog Spawn Egg into a hotbar slot.

SUCCESS CUE A Frog Spawn Egg is present in the hotbar.

7 **INFERRED**

Close the inventory and select the hotbar slot containing the Frog Spawn Egg.

INPUT

Press E to close the inventory; select the relevant slot using keys 1-9 or the mouse wheel.

SUCCESS CUE The Frog Spawn Egg is shown as the item held by the player.

8 **INFERRED**

Stand approximately two to four blocks from the Magma Block with an unobstructed view of its top surface. Aim at the center of the Magma Block's top face. Choose a viewing angle from which the space above the block and the frog's entire body, including its legs, will remain visible without moving the camera after spawning it.

INPUT

Use W, A, S, and D to position the player; move the mouse to aim at the Magma Block's top face.

SUCCESS CUE The top face of the Magma Block is within interaction reach and the full space immediately above it is clearly visible.

9 **REPORT**

Use the Frog Spawn Egg once on the exposed top face of the Magma Block to spawn a frog directly on the block. Do not repeatedly spawn additional frogs.

INPUT Right-click once on the top face of the Magma Block while holding the Frog Spawn Egg.

SUCCESS CUE Exactly one living frog is visible on top of and in contact with the Magma Block.

10 **REPORT** **TRIGGER**

Immediately release movement and use-item controls, keep the camera centered on the frog's full body, and allow the frog to remain in contact with the Magma Block. Wait only until the first clearly identifiable contact-damage event occurs; a normal damage event may be identified by the frog briefly flashing red and/or producing its hurt sound. Do not attack, push, leash, mount, apply an effect to, or otherwise interact with the frog.

SUCCESS CUE The frog is still visible at the Magma Block and has just experienced a contact-damage event without any player attack or other added damage source.

HANDOFF TO OBSERVATION

The frog has been spawned on the single Magma Block, the camera has an unobstructed view of its full body, all player inputs are released, and the frog has just taken contact damage from the Magma Block. Hand control to the observation subsystem while the frog remains available for subsequent damage ticks.

UNCERTAINTIES

- The report does not specify a game mode, seed, coordinates, biome, difficulty, or server requirement. Creative-mode single player is selected only as a deterministic way to place the required block and frog.
- The report says to “summon a frog” but supplies no command or command syntax. This plan uses a Frog Spawn Egg from the Creative inventory to avoid inventing an unreported command while still placing a normal frog directly on the Magma Block.
- The phrase “Summon a frog on him” is interpreted as spawning the frog on top of the previously placed Magma Block.
- The report does not specify how long to watch. The first identifiable Magma Block damage event is used as the minimum trigger, with the frog left in place for the observation subsystem to inspect subsequent damage ticks if needed.
- The frog's variant is not specified, so no particular temperate, warm, or cold variant is required.
