Status	Resolved / Fixed
Affected	1.19.1 Pre-release 6
Fixed in	1.19.1 Release Candidate 2
Reported	2022-07-20
Mojira category	Social Interactions

REPRODUCTION TARGET

Use version:

1.19.1 Pre-release 6

Affected versions (1):

1.19.1 Pre-release 6

Environment:

Minecraft: Java Edition 1.19.1 Pre-release 6 using an unmodified client. Use a fresh single-player world with commands enabled as the simplest deterministic environment; no dedicated server or additional player is required by the report. Use default chat and keyboard controls unless they have been rebound.

PRECONDITIONS

- Launch exactly Minecraft: Java Edition 1.19.1 Pre-release 6, not the listed fix version 1.19.1 Release Candidate 2 or a newer release.
- Create or open a world in which the player has permission to execute commands. For a fresh single-player world, set Allow Cheats to ON during world creation.
- Ensure chat is not hidden. If necessary, open Esc -> Options -> Chat Settings and set Chat to Shown.
- Ensure command feedback is enabled. This is enabled by default in a fresh world; if it was previously disabled, execute `/gamerule sendCommandFeedback true` before starting the listed steps.
- Use a keyboard capable of sending the F3+B debug-key combination. On keyboards where the function row controls media features, the Fn key may also need to be held.
- The player must be fully loaded into the world, with normal movement and keyboard input responding.

STEPS TO REPRODUCE

1 **REPORT**

Start Minecraft using the installation for Java Edition 1.19.1 Pre-release 6, then open the command-enabled test world.

SUCCESS CUE The player is present in the world and the pause or loading screen is no longer displayed.

2 **INFERRED**

Wait for the world to finish its initial loading before sending any input.

SUCCESS CUE Nearby terrain is rendered, the player can move normally, and keyboard input responds without a loading delay.

3 **INFERRED**

Open the in-game chat input using the Open Chat control; its default key is T.

INPUT T

SUCCESS CUE A chat input field is visible at the bottom of the screen and is ready to accept text.

4 **REPORT**

Enter the report's command exactly as written, including the leading slash, and press Enter to execute it as the current player.

INPUT /tag @s add test

SUCCESS CUE The chat input closes and a command-feedback message concerning the addition of the test tag appears in the chat area. If an insufficient-permission or unknown-command error appears instead, stop and enable commands before retrying in a fresh world.

5 **REPORT**

Use the command-feedback message as the control system message. Inspect the left side of that message and confirm that its gray system-message color indicator is visible before proceeding.

SUCCESS CUE The command-feedback line remains identifiable in chat and has a gray indicator immediately to its left, establishing the report's control condition.

6 **REPORT** **TRIGGER**

With the game world active and no menu or chat input field open, invoke the debug hitbox function once. Hold F3 and tap B; on keyboards that reserve function keys for media controls, hold Fn as well while sending F3+B. Do not invoke the combination a second time before observation.

INPUT F3+B

SUCCESS CUE A debug status message indicating that hitboxes were shown or hidden has just appeared in the chat area, confirming that the debug function executed.

HANDOFF TO OBSERVATION

The F3+B debug function has just executed once, and its resulting debug status message is visible in the chat area. Begin observation of that message and its left-side indicator presentation without pressing F3+B again.

UNCERTAINTIES

- The report does not specify single-player versus multiplayer, game mode, world seed, operating system, or customized controls. A fresh command-enabled single-player world with default controls is selected as the minimal deterministic setup.
- The report permits any debug function and gives F3+B as its example. This plan uses F3+B exactly to avoid introducing an unreported alternative.
- The report does not explicitly state the command-feedback gamerule or chat visibility settings. Their enabled states are necessary for the two comparison messages to be visible and are normally present in a fresh world.
- No external version verification was needed because the affected version, exact command, and debug-key combination are all supplied directly by the report.
