## REPRODUCTION TARGET

Use version:

1.15.2

Affected versions (7):

1.15.2

1.16 Release Candidate 1

1.16

1.16.4

20w49a

20w51a

21w03a

Environment:

Minecraft Java Edition 1.15.2 in a single-player world. Use Creative mode as a deterministic way to obtain a loom and exactly 16 identical banners. Keyboard and mouse instructions assume default controls; use the equivalent bound controls if they have been changed.

## PRECONDITIONS

---

- Launch the exact affected version Minecraft Java Edition 1.15.2, not the fix version 21w10a or a later release.
- Have a single-player Creative-mode world available. No particular seed, biome, structure, or coordinates are required by the report.
- The player inventory must have at least two empty slots: one for a stack of 16 identical blank banners and one for a loom.
- Use one banner type throughout the procedure. This plan uses blank White Banners; do not mix colors, patterns, custom names, or other banner data.
- Use a mouse and keyboard, or controls capable of performing the inventory actions equivalent to right-click and Shift+left-click.

## STEPS TO REPRODUCE

### 1 INFERRED

Start Minecraft Java Edition using the 1.15.2 installation, select Singleplayer, and create or load a Creative-mode world. For a new world, select Create New World, change Game Mode to Creative, and select Create New World again.

#### INPUT

Launcher installation: 1.15.2; Singleplayer -> Create New World -> Game Mode: Creative -> Create New World

**SUCCESS CUE** The player is standing in a fully loaded world in Creative mode, and movement responds normally.

### 2 INFERRED

Open the Creative inventory and select the Search Items tab so the item-search field is available.

**INPUT** Press E; click the Search Items tab

**SUCCESS CUE** The Creative inventory is open and a text search field is visible.

### 3 INFERRED

Search for a blank White Banner. Left-click the White Banner result to pick up its full stack of 16, then left-click an empty hotbar or player-inventory slot to deposit the stack. Do not use a patterned, renamed, or differently colored banner.

**INPUT** white banner

**SUCCESS CUE** One player-inventory or hotbar slot contains exactly 16 White Banners in a single stack.

### 4 INFERRED

Replace the inventory search text with "loom". Obtain one Loom from the search result and place it into a different empty hotbar slot. If the cursor picks up more than one loom, retain at least one loom in the hotbar; the additional loom count does not affect the banner-stack condition.

**INPUT** loom

**SUCCESS CUE** A Loom is present in the hotbar, and the separate stack of exactly 16 White Banners remains intact.

### 5 INFERRED

Close the inventory, select the hotbar slot containing the Loom, aim at the top surface of a solid block within reach, and place the loom.

**INPUT** Press E; select the Loom hotbar slot; right-click a solid block surface

**SUCCESS CUE** A loom block is placed in the world directly within the player's reach.

### 6 REPORT

Open the placed loom by aiming at it and using it.

**INPUT** Right-click the loom

**SUCCESS CUE** The loom interface is open. Its banner input slot is visible above the player's inventory, and the stack of 16 White Banners is visible in the lower player-inventory area.

## 7 **INFERRED**

In the player-inventory section of the open loom interface, right-click the stack of 16 White Banners once. This splits the even stack in half: 8 banners remain in the original inventory slot and 8 banners attach to the mouse cursor.

**INPUT** Right-click the 16 White Banner stack once

**SUCCESS CUE** The original player-inventory slot shows 8 White Banners, and the cursor holds the other 8 White Banners.

## 8 **REPORT**

Move the cursor to the loom's banner input slot—the loom slot intended to accept a banner—and left-click once to deposit all 8 cursor-held White Banners into it. Leave the other stack of 8 identical White Banners in its existing player-inventory slot. Do not add dye or a banner pattern.

**INPUT** Left-click the loom banner input slot

**SUCCESS CUE** The loom banner input slot contains 8 White Banners, the cursor is empty, and a separate stack of 8 identical White Banners remains in the player inventory. The inventory stack has exactly 8 spaces available, equal to the 8 banners in the loom.

## 9 **REPORT** **TRIGGER**

With the loom interface still open, hold the inventory-transfer modifier and left-click the stack of 8 White Banners in the loom's banner input slot exactly once. Release the inputs after the click, and do not click any resulting inventory slot before handing control to the observation subsystem.

**INPUT** Hold Left Shift and left-click the 8 White Banners in the loom banner input slot once

**SUCCESS CUE** The Shift+left-click transfer action has just been performed, the loom interface remains open, and no additional inventory interaction has occurred.

## HANDOFF TO OBSERVATION

---

The player has just Shift+left-clicked the 8 White Banners out of the loom's banner input slot while a separate incomplete stack of 8 identical White Banners was present in the player inventory. The loom interface is still open and no subsequent click has updated the inventory; begin observation immediately.

## UNCERTAINTIES

---

- The report does not specify a required game mode, world seed, coordinates, or whether the test must use single-player or a dedicated server. This plan uses a single-player Creative-mode world solely to make item acquisition deterministic.
- The report requires banners of the same type but does not specify a color or pattern. This plan uses blank White Banners as the simplest identical banner type.
- The report allows any counts satisfying its stack-capacity condition. This plan uses 8 banners in the loom and 8 in the inventory because the inventory stack then has exactly enough capacity to accept the loom stack and complete the maximum banner stack of 16.
- The report does not specify how long the extra inventory state remains available for inspection. The handoff therefore occurs immediately after the triggering Shift+left-click and before any further inventory action.

MANUAL RESULT

|                  |                    |
|------------------|--------------------|
| Version used     |                    |
