

Single shift-clicking on items while holding the same item with the cursor stacks the items

[MC-267806](#) INVENTORY

Status	Resolved / Fixed
Affected	23w51b
Fixed in	24w03a
Reported	2024-01-08
Mojira category	Inventory

REPRODUCTION TARGET

Use version:

23w51b

Affected versions (1):

23w51b

Environment:

Minecraft Java Edition snapshot 23w51b in a single-player Creative-mode world, using keyboard-and-mouse inventory controls. Use an ordinary Chest and one full stack of a single block type; this plan uses 64 Stone as the deterministic example.

PRECONDITIONS

- Launch the exact affected snapshot 23w51b rather than the fix version 24w03a.
- Use a world in which the player can place and open an ordinary Chest. A newly created Creative-mode world is used here only to simplify item acquisition; the report does not specify a game mode.
- Ensure the player inventory has at least one empty slot available as a potential quick-move destination.
- Use the configured Sneak/quick-move modifier when instructed; its default keyboard binding is Left Shift.
- Perform only a single Shift+left-click at the trigger step. Do not double-click.

STEPS TO REPRODUCE

1 REPORT

From the Minecraft Launcher, start Minecraft Java Edition using the installation/profile for snapshot 23w51b. Do not use 24w03a, which is listed as the fix version.

INPUT Select installation 23w51b, then click Play.

SUCCESS CUE The main-menu version text identifies the running game as snapshot 23w51b.

2 INFERRED

Create or load a single-player world in Creative mode. After entering the world, wait until nearby terrain has rendered and movement responds normally.

INPUT Singleplayer -> Create New World -> Game Mode: Creative -> Create New World

SUCCESS CUE The player is standing in a loaded world and can fly or access the Creative inventory.

3 INFERRED

Open the Creative inventory and select the Search Items tab, identified by the compass icon.

INPUT Press E, then click the compass-shaped Search Items tab.

SUCCESS CUE The Creative inventory is open and its item-search field is visible.

4 INFERRED

Obtain an ordinary Chest item. Click the search field, enter "chest", left-click the result named Chest, and left-click an empty hotbar slot such as slot 1 to place the chest stack there. Do not choose a Trapped Chest or Ender Chest.

INPUT Type: chest; left-click Chest; left-click hotbar slot 1.

SUCCESS CUE An ordinary Chest item stack is in hotbar slot 1 and the mouse cursor is not carrying an item.

5 INFERRED

Replace the search text with "stone", pick the ordinary block named Stone, and place its full 64-item stack into a different empty hotbar slot such as slot 2.

INPUT

Click the search field; press Ctrl+A; type: stone; left-click Stone; left-click hotbar slot 2.

SUCCESS CUE Hotbar slot 2 contains exactly 64 Stone, the chest remains in another hotbar slot, and the mouse cursor is empty.

6 INFERRED

Close the Creative inventory and select the hotbar slot containing the ordinary Chest.

INPUT Press E, then press 1 if the Chest was placed in hotbar slot 1.

SUCCESS CUE The world view is visible and the Chest item is selected in the active hotbar slot.

7 REPORT

Aim at the top surface of a nearby solid ground block and place one ordinary Chest.

INPUT Right-click the target ground surface.

SUCCESS CUE A normal wooden Chest block is present directly in front of or near the player.

8 **REPORT**

Aim at the placed Chest and open it.

INPUT Right-click the Chest.

SUCCESS CUE The Chest interface is open, showing the chest storage grid above the player's inventory and hotbar.

9 **REPORT**

Move the full stack of 64 Stone from the player's hotbar into an empty slot in the chest storage grid. First left-click the 64-Stone hotbar stack to attach it to the cursor, then left-click an empty chest slot to deposit the entire stack.

INPUT

Left-click the 64 Stone in the hotbar, then left-click an empty slot in the chest's upper storage grid.

SUCCESS CUE One chest slot contains 64 Stone, the original player hotbar slot is empty, and the cursor carries no item.

10 **REPORT**

Left-click the 64-Stone stack in the chest once to pick up the entire stack with the cursor. Keep the pointer positioned over that now-empty chest slot.

INPUT Single left-click on the 64-Stone chest slot.

SUCCESS CUE The original chest slot is empty and the cursor is carrying 64 Stone.

11 **INFERRED**

Without moving to another slot, right-click the same empty chest slot exactly three separate times. Each right-click deposits one Stone while retaining the remainder on the cursor.

INPUT Right-click; right-click; right-click.

SUCCESS CUE The chest slot under the pointer contains exactly 3 Stone while the cursor still carries the remaining 61 Stone.

12 **REPORT**

Keep the cursor over the 3-Stone stack and press and hold the configured Sneak/quick-move modifier, which is Left Shift by default.

INPUT Press and hold Left Shift.

SUCCESS CUE Left Shift remains held while the chest interface is open, the pointer is over the 3-Stone chest stack, and 61 Stone remain attached to the cursor.

13 **REPORT** **TRIGGER**

While continuing to hold Left Shift and while the cursor still carries the same Stone item type, left-click the 3-Stone chest stack exactly once. Do not double-click or perform any further inventory action before handing control to the observation subsystem. Left Shift may be released after the single click has been registered.

INPUT While holding Left Shift: single left-click once; then release Left Shift.

SUCCESS CUE One Shift+left-click input has just been issued on the 3-Stone chest stack while the cursor was carrying 61 Stone, and the chest interface remains open for immediate inspection.

HANDOFF TO OBSERVATION

The chest interface remains open immediately after the player has single Shift+left-clicked the 3-Stone chest stack while holding 61 Stone of the same type on the cursor. No additional clicks or inventory actions have been performed; begin observation now.

UNCERTAINTIES

- The report does not specify single-player versus multiplayer, a world seed, or a required game mode. This plan uses a new single-player Creative-mode world as the simplest deterministic setup.
- The report says only to use a stack of blocks and does not identify a block type. This plan uses ordinary Stone; the test condition is that both stacks contain the same item type.
- The report says to place "a few" items back into the chest without specifying a count. This plan uses exactly three, leaving 61 Stone on the cursor and 3 Stone in the chest slot.
- Creative inventory normally supplies a full stack of the selected item. If the chosen UI configuration supplies a different quantity, ensure the chest initially receives exactly 64 of one block type before continuing.
