

Decorators are independent of world seed

[MC-238073](#) WORLD GENERATION

Status	Resolved / Fixed
Affected	21w10a; 1.17.1; 21w37a; 21w38a; 21w39a; 21w40a; 21w41a; 21w42a
Fixed in	21w43a
Reported	2021-09-30
Mojira category	World generation

REPRODUCTION TARGET

Use version: 21w10a

Affected versions (8):

21w10a

1.17.1

21w37a

21w38a

21w39a

21w40a

21w41a

21w42a

Environment:

Minecraft Java Edition snapshot 21w10a in single-player. Use two separately created Single Biome worlds configured for the Lush Caves biome, both using seed -8718622960759467126. Use Creative mode with commands enabled, then Spectator mode for locating and revisiting an underground decorator-rich reference chamber. Use an unmodified vanilla client with no custom datapacks or world-generation modifications.

PRECONDITIONS

- The Minecraft Launcher is able to start the exact Java Edition snapshot 21w10a; do not use the fixed snapshot 21w43a.
- Snapshots are enabled in the Minecraft Launcher installation settings if 21w10a is not already available.
- No existing world is reused or copied: the reproduction requires two independently generated world saves with identical generation settings and the same seed.
- Use the same client settings for both worlds. Do not add or remove datapacks, mods, or other world-generation modifiers between world creation attempts.
- The executor can save the first world's reference coordinates, yaw, pitch, and screenshot for use while loading the second world.
- Instructions assume the English user interface and default controls: T opens chat, F3 opens the debug overlay, F2 captures a screenshot, and Esc opens the pause menu.

STEPS TO REPRODUCE

1 REPORT

Start Minecraft Java Edition using the launcher installation for snapshot 21w10a. On the title screen, verify that the displayed version is 21w10a before continuing.

SUCCESS CUE The Minecraft title screen is open and identifies the running version as 21w10a.

2 REPORT

Open the single-player world list and begin creating the first independent world.

INPUT Singleplayer -> Create New World

SUCCESS CUE The Create New World screen is open.

3 INFERRED

Give the first world a distinct baseline name so that it cannot be confused with the later independently generated world.

INPUT World Name: MC-238073-Baseline

SUCCESS CUE The world-name field contains MC-238073-Baseline.

4 INFERRED

Set the first world's game mode to Creative and enable commands. Creative mode and commands are execution aids for reaching an underground reference location without changing the required seed.

INPUT Game Mode: Creative; Allow Cheats: ON

SUCCESS CUE The creation screen shows Creative mode and commands/cheats enabled.

5 REPORT

Open the additional world-generation options and enter the report's seed exactly, including its leading minus sign.

INPUT More World Options... -> Seed for the World Generator: -8718622960759467126

SUCCESS CUE The seed field contains exactly -8718622960759467126.

6 VERIFIED

Configure the world as a Single Biome world and select Lush Caves as its biome. In 21w10a, Lush Caves do not generate in the default world type, so this custom world configuration is required to expose their generated decorators in the recommended affected version.

INPUT World Type: Single Biome -> Customize -> select Lush Caves -> Done

SUCCESS CUE The world-generation screen shows Single Biome configured with the Lush Caves biome.

7 REPORT

Leave all other world-generation settings unchanged, then create the first world.

INPUT Create New World

SUCCESS CUE The game leaves the creation menus and begins generating MC-238073-Baseline.

8 INFERRED

Wait for the first world to finish loading. Do not continue while the loading screen is visible or while nearby terrain is still appearing.

SUCCESS CUE The player can move normally, nearby chunks are rendered, and the pause or chat interface responds without waiting for initial world loading.

9 REPORT

Verify and record the world's seed using an in-game command. Press T to open chat, enter the command with its leading slash, and press Enter.

INPUT /seed

SUCCESS CUE Chat reports the seed as -8718622960759467126; save or copy this value as the seed used for the second world.

10 INFERRED

Enter Spectator mode so the executor can pass through terrain and locate an underground Lush Caves chamber without mining or placing blocks. Press T, enter the command with its leading slash, and press Enter.

INPUT /gamemode spectator

SUCCESS CUE The player is in Spectator mode, can fly, and can pass through solid blocks.

11 INFERRED

Move to a fixed staging area away from the initially generated spawn chunks. Press T, execute the teleport command with its leading slash, and press Enter.

INPUT /tp @s 512 32 512

SUCCESS CUE The player is near X=512, Y=32, Z=512 in Spectator mode.

12 INFERRED

Wait until the terrain around the staging area has generated and rendered. Do not start selecting the reference chamber while chunks are still visibly loading.

SUCCESS CUE Underground terrain around X=512, Z=512 is visible and flight responds normally.

13 INFERRED

While remaining in Spectator mode, fly through the nearby underground terrain until an unobstructed Lush Caves chamber is visible. Prefer a chamber containing several clearly identifiable generated decorative features, such as moss coverage, azalea bushes, cave vines, spore blossoms, or dripleaf. Do not break, place, or otherwise alter any blocks. If no suitable chamber is immediately visible, search vertically and horizontally around the staging point rather than returning to spawn.

INPUT Use movement controls and Space/Left Shift for vertical Spectator flight.

SUCCESS CUE A well-lit or otherwise clearly visible underground chamber containing multiple generated Lush Caves decorative features is in view.

14 INFERRED

Choose a stationary reference viewpoint from which several of the chamber's generated decorative blocks are visible at once. Avoid positioning the camera inside a block. Once the view is selected, stop moving.

SUCCESS CUE The camera is stationary in open cave space and shows multiple identifiable generated decorative features.

15 **INFERRED**

Press F3 to open the debug overlay. Record the displayed player X, Y, and Z coordinates as X_REF, Y_REF, and Z_REF. Also record the two camera rotation values shown on the Facing line as YAW_REF and PITCH_REF. Preserve negative signs and decimal values. These five values must be substituted into the second-world teleport command later.

INPUT F3

SUCCESS CUE X_REF, Y_REF, Z_REF, YAW_REF, and PITCH_REF have been saved outside the world and the player has not moved from the selected viewpoint.

16 **INFERRED**

Capture a baseline screenshot while still at the recorded viewpoint. Keep the debug overlay visible so the image also preserves the location and facing information. Do not move before taking the screenshot.

INPUT F2

SUCCESS CUE Minecraft confirms that a screenshot was saved, and the player remains at the recorded reference viewpoint.

17 **INFERRED**

Pause the game and return to the title screen without deleting or copying the first world.

INPUT Esc -> Save and Quit to Title

SUCCESS CUE The title screen is visible and the MC-238073-Baseline save remains available in the single-player world list.

18 **REPORT**

Open the single-player world list and begin creating a second, independent world. Do not duplicate or reopen the baseline save.

INPUT Singleplayer -> Create New World

SUCCESS CUE A fresh Create New World screen is open.

19 **INFERRED**

Give the independently generated second world a distinct comparison name.

INPUT World Name: MC-238073-Replica

SUCCESS CUE The world-name field contains MC-238073-Replica.

20 **INFERRED**

Set the second world to the same Creative game mode and commands setting used for the baseline world.

INPUT Game Mode: Creative; Allow Cheats: ON

SUCCESS CUE The second world's creation screen shows Creative mode and commands/cheats enabled.

21 **REPORT**

Open the additional world-generation options and enter exactly the same report seed used for the baseline world.

INPUT More World Options... -> Seed for the World Generator: -8718622960759467126

SUCCESS CUE The second world's seed field contains exactly -8718622960759467126.

22 **VERIFIED**

Configure the second world with exactly the same custom world type and biome as the first world.

INPUT World Type: Single Biome -> Customize -> select Lush Caves -> Done

SUCCESS CUE The second world is configured as a Single Biome Lush Caves world.

23 **REPORT**

Confirm that the second world's seed, world type, biome, and other world-generation options match the baseline settings, then create the world.

INPUT Create New World

SUCCESS CUE The game begins generating the independent MC-238073-Replica world.

24 **INFERRED**

Wait for the second world to finish its initial loading and for movement and chat to respond normally.

SUCCESS CUE The player can move normally and nearby spawn chunks are rendered in MC-238073-Replica.

25 **REPORT**

Verify that the second world received the required seed. Press T, enter the command with its leading slash, and press Enter.

INPUT /seed

SUCCESS CUE Chat reports exactly -8718622960759467126.

26 **INFERRED**

Enter Spectator mode in the second world. Press T, enter the command with its leading slash, and press Enter.

INPUT /gamemode spectator

SUCCESS CUE The player can fly and pass through blocks in MC-238073-Replica.

27 **INFERRED** **TRIGGER**

Teleport to the exact baseline viewpoint and orientation. Replace X_REF, Y_REF, Z_REF, YAW_REF, and PITCH_REF with the five numeric values recorded in step 15; do not type the placeholder names or braces. Open chat with T, execute the completed command with its leading slash, and press Enter. This action loads or generates the second world's chunks at the reference location.

INPUT /tp @s {X_REF} {Y_REF} {Z_REF} {YAW_REF} {PITCH_REF}

SUCCESS CUE The debug coordinates and camera rotation in the second world match the recorded baseline values.

28 **INFERRED**

Do not move or interact after teleporting. Wait until the reference chamber and all surrounding chunks have fully rendered and camera movement would respond normally.

SUCCESS CUE The second world is fully rendered at the same recorded position and orientation used for the baseline screenshot, with the player stationary in Spectator mode.

HANDOFF TO OBSERVATION

The independently generated MC-238073-Replica world has just loaded the target chunks for seed -8718622960759467126, and the stationary Spectator camera is at the exact position and orientation recorded in the baseline world. Hand control to the observation subsystem with the step-16 baseline screenshot available for comparison.

UNCERTAINTIES

- The report does not specify a world type or target biome. Snapshot 21w10a is nevertheless the required recommended version because it is the first listed affected version. External version documentation confirms that Lush Caves in 21w10a are available through custom Single Biome world generation rather than the default world type, so this plan uses a Single Biome Lush Caves world.
- The report supplies no comparison coordinates or individual decorator to inspect. The X=512, Y=32, Z=512 staging location and the procedure for dynamically recording a nearby decorator-rich chamber are practical choices intended to provide an exact location that can be revisited in the second world.
- Creative mode, enabled commands, Spectator mode, the teleport commands, and the baseline screenshot are execution aids. The report does not state that these are required conditions of the bug.
- The report says the same-seed creation may be repeated as many times as desired. This plan creates two independent worlds because two are the minimum needed to establish a baseline and a same-seed comparison state.
- The unavailable report attachments may depict specific examples or locations, but the supplied report text does not identify any attachment as mandatory for reproduction.
