

Client continues to connect to server after canceling on 'Connecting to server' screen

MC-74984 NETWORKING

Status	Resolved / Fixed
Affected	Minecraft 1.8; Minecraft 1.8.1; Minecraft 1.8.3; Minecraft 1.8.4; Minecraft 1.8.7; Minecraft 1.8.8; Minecraft 1.8.9; Minecraft 1.9.1; Minecraft 1.9.2; Minecraft 1.9.4; Minecraft 1.10; Minecraft 1.11.2; Minecraft 17w16b; Minecraft 1.12; Minecraft 1.12.2; Minecraft 1.13; Minecraft 18w31a (+more)
Fixed in	1.20 Pre-release 5
Reported	2014-12-01
Mojira category	Networking

REPRODUCTION TARGET

Use version: Minecraft 1.8

Affected versions (30):

Minecraft 1.8

Minecraft 1.8.1

Minecraft 1.8.3

Minecraft 1.8.4

Minecraft 1.8.7

Minecraft 1.8.8

Minecraft 1.8.9

Minecraft 1.9.1

Minecraft 1.9.2

Minecraft 1.9.4

Minecraft 1.10

Minecraft 1.11.2

Minecraft 17w16b

Minecraft 1.12

Minecraft 1.12.2

Minecraft 1.13

Minecraft 18w31a

Minecraft 1.13.1

1.14.4

1.15.2

20w13b

1.16 Pre-release 5

1.16.1

1.16.2

1.16.3

1.16.4

20w51a

1.16.5 Release Candidate 1

1.16.5

1.19

Environment:

Use an unmodified Minecraft Java Edition client running exactly Minecraft 1.8 with an authenticated multiplayer account. Provide two distinct, simultaneously available multiplayer servers, designated Server A and Server B, that both accept a Minecraft 1.8 client and the test account. Controlled vanilla-compatible servers are preferred to eliminate unrelated server modifications. Server A must take long enough to connect that the client displays the "Connecting to server..." screen and its Cancel button; if a local Server A connects too quickly, use a more latent endpoint or controlled network delay without modifying Minecraft protocol traffic.

PRECONDITIONS

- Completely exit every Minecraft client process before beginning. The report states that restarting the game clears the lingering connection, so a fresh client process is required for a clean attempt.
- Install or configure a Minecraft Launcher installation for the exact affected version Minecraft 1.8. Do not use the fix version 1.20 Pre-release 5.
- Have the hostname or IP address and port for two different reachable servers: Server A, whose connection will be canceled, and Server B, which will be joined immediately afterward.
- Confirm independently before the reproduction attempt that both servers accept the same authenticated test account when joined normally with Minecraft 1.8. Disconnect normally after each connectivity check, and then restart the client before beginning the actual attempt.
- Ensure Server A does not complete world loading so quickly that the "Connecting to server..." screen cannot be canceled. The reproduction must cancel from that screen before Server A's world appears.
- Ensure the client is not already connected to a singleplayer world, Realm, or multiplayer server when the procedure begins.
- Perform only one cancel-and-switch sequence per fresh client launch. If Server A's world loads before Cancel is activated or any other timing step is missed, fully exit Minecraft and restart from step 1 rather than continuing from a contaminated connection state.

STEPS TO REPRODUCE

1 **REPORT**

Open the Minecraft Launcher, select the installation configured for exactly Minecraft 1.8, and start the game by clicking Play.

INPUT Launcher installation/version: Minecraft 1.8; button: Play

SUCCESS CUE The Minecraft 1.8 title screen is visible and no world or server is loaded.

2 **INFERRED**

From the title screen, open the multiplayer server menu by left-clicking Multiplayer once.

INPUT Mouse left-click: Multiplayer

SUCCESS CUE The Play Multiplayer screen and its server list are visible.

3 **INFERRED**

If Server A is not already saved, left-click Add Server, enter a recognizable name such as "Server A", enter the Server A hostname or IP address including its port when non-default, and left-click Done. Repeat this process for Server B using its distinct address. Do not configure both entries to resolve to the same server endpoint.

INPUT

Server Name: Server A / Server B; Server Address: addresses supplied by the test environment; buttons: Add Server, Done

SUCCESS CUE Two separately named rows, Server A and Server B, are visible in the multiplayer server list and represent different server endpoints.

4 **REPORT**

Wait only until the Server A row can be selected. Do not join Server B first, and do not enter another world during this attempt.

SUCCESS CUE The multiplayer server list remains interactive and Server A is visible.

5 **INFERRED**

Left-click Server A once so that its row is highlighted.

INPUT Mouse left-click: Server A row

SUCCESS CUE Server A is the selected server and the Join Server button is available.

6 **REPORT**

Start connecting to Server A by left-clicking Join Server once. Do not double-click repeatedly.

INPUT Mouse left-click: Join Server

SUCCESS CUE The full-screen "Connecting to server..." message is visible and the Cancel button is available; Server A's world has not appeared.

7 REPORT TRIGGER

While the screen still says "Connecting to server...", immediately left-click Cancel exactly once. The click must occur before terrain or an in-game world from Server A appears. If Server A's world appears first, invalidate this attempt, completely exit Minecraft, and restart from step 1.

INPUT Mouse left-click: Cancel

SUCCESS CUE The connecting screen closes and a Minecraft menu is visible without Server A's world ever having been displayed.

8 INFERRED

As soon as control returns, navigate back to the multiplayer server list if necessary. If the title screen is visible, left-click Multiplayer; if the Play Multiplayer screen is already visible, continue without leaving it. Do not idle, refresh the list, or restart the client.

INPUT If required, mouse left-click: Multiplayer

SUCCESS CUE The Play Multiplayer screen is visible immediately after canceling the Server A connection.

9 REPORT

Immediately left-click Server B once to select it. Server B must be different from Server A.

INPUT Mouse left-click: Server B row

SUCCESS CUE Server B is highlighted and the Join Server button is available.

10 REPORT

Without waiting for the server list to refresh or for additional ping results, left-click Join Server once to begin connecting to Server B.

INPUT Mouse left-click: Join Server

SUCCESS CUE The client leaves the server list and displays the connection or login screen for the second join attempt.

11 REPORT

Allow the second connection attempt to proceed without pressing Cancel, Escape, or opening another world. Wait until an in-game world view and HUD appear and the client begins accepting normal keyboard and mouse input. Do not disconnect, restart, or evaluate the resulting client state before handing control to the observation subsystem.

SUCCESS CUE An in-game world view has appeared following the Server B join attempt, with the Minecraft client still running from the same uninterrupted process that canceled Server A.

HANDOFF TO OBSERVATION

The client has just reached an in-game world view after canceling Server A specifically from the "Connecting to server..." screen and immediately initiating a connection to distinct Server B without restarting Minecraft. Hand control to the observation subsystem now so it can inspect the client and both server-side connection states before any disconnect, menu transition, or restart occurs.

UNCERTAINTIES

- The report does not provide reusable addresses or configurations for Server A and Server B. Using two controlled, distinct Minecraft 1.8-compatible servers is therefore a practical implementation choice supported by comments confirming reproduction on vanilla and with arbitrary servers.
- The original description names CubeKrowd as the accidentally selected server, but no server address is supplied and the report's later comments confirm that the issue is not restricted to CubeKrowd. This plan does not depend on that historical public server.
- The report does not provide an exact maximum delay between canceling Server A and joining Server B. It only establishes that the first connection must be canceled while loading and that the next server should be joined quickly; therefore the plan instructs the executor to act immediately without assigning an unsupported millisecond threshold.
- Depending on the exact Minecraft 1.8 menu transition, Cancel may return directly to the multiplayer list or to the title screen. Step 8 handles either state without altering the required connection order.
- The first listed affected version, Minecraft 1.8, is used as required. Some comments provide more explicit alternate timing methods for later 1.8.x versions, but those alternatives were not substituted for the primary report's Minecraft 1.8 cancel-and-switch sequence.
- A very low-latency local Server A may finish loading before the Cancel action can be performed. The report does not prescribe a particular latency mechanism, so using a naturally latent endpoint or controlled network delay is an execution aid rather than a report-stated requirement.
