Reported	2021-12-06
Mojira category	Sound

REPRODUCTION TARGET

Version: Minecraft Java Edition 1.21 (an affected release listed in the report)

Environment: Single-player Minecraft Java Edition world. Use Survival mode with cheats enabled so the normal player inventory is shown and the supplied /give command can be executed. An integrated-server LAN session or dedicated server is not required. Audio output must be available.

PRECONDITIONS

- Launch exactly Minecraft Java Edition 1.21; do not perform the reproduction in 24w33a or a later version identified by the report as containing the fix.
- Create a new single-player Survival world with Allow Cheats set to ON, or load an existing single-player world in which the player has permission to use /give.
- Ensure at least one main-inventory or hotbar slot is empty. A newly created world with an otherwise empty inventory is suitable.
- Ensure the game is not paused and the player can open chat and the inventory normally.
- Ensure a working audio output device is selected and Minecraft is not muted. Under Esc -> Options -> Music & Sounds, set Master Volume and Players to audible, nonzero values.
- Do not place any items into the bundle obtained during the procedure; the test requires the bundle to remain empty.

STEPS TO REPRODUCE

1 REPORT

Start Minecraft Java Edition 1.21 and enter the prepared single-player world. Wait for world loading to finish before continuing.

SUCCESS CUE Terrain is rendered, the HUD is visible, and player movement and controls respond normally.

2 INFERRED

Confirm that the inventory has at least one completely empty slot. Press the inventory action key, which is E by default, and visually locate an empty square in the main inventory grid or hotbar section. If no slot is empty, move or discard an item to create one.

INPUT E

SUCCESS CUE The player inventory is open and at least one inventory slot contains no item icon or stack count.

3 INFERRED

Close the inventory using the inventory action key so the supplied command can be entered through chat.

INPUT E

SUCCESS CUE The inventory screen is closed and the normal world view is visible.

4 INFERRED

Open in-game chat using the default chat key.

INPUT T

SUCCESS CUE The chat input field is open and ready to accept a command.

5 REPORT

Enter the report's command exactly as written, including the leading slash, and press Enter once.

INPUT /give @s minecraft:bundle

SUCCESS CUE The command is accepted and one bundle is added to the player's inventory or hotbar. No command-permission or unknown-item error is displayed.

6 REPORT

Open the player inventory using the inventory action key, which is E by default.

INPUT E

SUCCESS CUE The inventory screen is open, the newly given bundle is visible in one slot, and at least one other slot is empty.

7 REPORT

Verify that the bundle has not been loaded with any items. Do not right-click or place another item onto the bundle during setup.

SUCCESS CUE The bundle obtained directly from the /give command remains the only required test item and no item has been inserted into it.

8 **REPORT**

Move the mouse pointer over the bundle's inventory slot and left-click once to pick up the entire bundle stack onto the mouse cursor. Do not merely select its hotbar slot.

INPUT left-click once on the bundle

SUCCESS CUE The bundle icon follows the mouse cursor and its former inventory slot is empty.

9 **REPORT**

While continuing to hold the empty bundle on the mouse cursor, move the pointer over a different, completely empty inventory or hotbar slot. Do not click yet.

SUCCESS CUE The bundle is still attached to the cursor, and the cursor is positioned over a slot that contains no item.

10 **REPORT** **TRIGGER**

With game audio audible, right-click the empty slot exactly once while the empty bundle is held on the mouse cursor. Do not repeat the click; immediately hand control to the observation subsystem after this input.

INPUT right-click once on the empty inventory slot

SUCCESS CUE A single secondary-click input has been performed on an empty slot while the empty bundle was held by the cursor; no further inventory action has been taken.

HANDOFF TO OBSERVATION

The player inventory is still open, and the player has just right-clicked once on a completely empty inventory slot while holding an empty bundle on the mouse cursor. Begin audio observation immediately, before any additional click, inventory closure, or item movement.

UNCERTAINTIES

- The report lists many affected versions but does not require a particular one. Java Edition 1.21 is selected because it is an explicitly listed affected stable release; version 24w33a must not be used because the report identifies it as the fix version.
- The report does not specify a game mode or world configuration. Survival mode with cheats enabled is a practical choice because it provides the standard player inventory while allowing the supplied `/give` command.
- The exact volume slider category responsible for the item sound is not stated in the report. Keeping both Master Volume and Players at audible values avoids muting the trigger sound without changing the reproduction action.
