REPRODUCTION TARGET

Version: Minecraft Java Edition 1.19.3

Environment: Unmodified Minecraft Java Edition 1.19.3 client in a single-player world, using the English (US) language and with commands/cheats enabled. No specific seed, coordinates, dimension, game mode, item, entity, or multiplayer server is required.

PRECONDITIONS

- Launch the exact affected release Minecraft Java Edition 1.19.3 rather than a listed fix version.
- Use the vanilla English (US) language resources; disable any resource pack that replaces English command translations.
- Have permission to execute `/tellraw`. For the single-player procedure below, create or open a world with cheats enabled.
- Use the report-supplied `tellraw` command without adding translation arguments or changing its JSON syntax.

STEPS TO REPRODUCE

1 INFERRED

Start the Minecraft Launcher, select the installation for Java Edition 1.19.3, and launch the game. Do not use a later version for this reproduction.

SUCCESS CUE The title screen identifies the running version as Minecraft Java Edition 1.19.3.

2 INFERRED

From the title screen, open Options, select Language, choose English (US), confirm the selection, and return to the title screen. If English (US) is already selected, leave it selected.

SUCCESS CUE The menus are displayed in English and English (US) is the selected language.

3 INFERRED

Select Singleplayer and create a new world. Use Creative mode as a simple way to establish a command-capable test environment, and ensure Allow Cheats is set to ON before selecting Create New World. An existing cheats-enabled world may be used instead because the report does not require fresh world data.

SUCCESS CUE The player is inside a loaded single-player world and is permitted to run commands.

4 INFERRED

Wait before executing the test until surrounding terrain has rendered and normal player movement responds without world-loading interruption.

SUCCESS CUE Terrain is visible around the player and movement responds normally.

5 INFERRED

Press the control bound to Open Chat, which is T by default, to place the text cursor in the in-game chat input.

INPUT T

SUCCESS CUE The chat input field is open and ready to accept a command.

6 REPORT TRIGGER

Enter the report-supplied tellraw command using the affected translation key `commands.clear.success.single`. Include the leading slash, preserve the capitalization and JSON punctuation exactly, and press Enter to execute it as the current player.

INPUT `/tellraw @s {"translate":"commands.clear.success.single"}`

SUCCESS CUE A new tellraw message is rendered for the player without a red command-syntax or permission error.

7 INFERRED

Immediately press the Open Chat control again so the recent tellraw message remains fully visible in expanded chat. Do not enter another command or clear the chat.

INPUT T

SUCCESS CUE Expanded chat is open and the tellraw message produced by step 6 is visible as the most recent chat entry.

HANDOFF TO OBSERVATION

The translation component for `commands.clear.success.single` has just been rendered by the report-supplied `/tellraw` command, and expanded chat is open with that message visible. Hand control to the observation subsystem to inspect the wording of the rendered message.

UNCERTAINTIES

- The report does not specify a required game mode, world seed, coordinates, dimension, or server type. The plan uses a Creative single-player world with cheats enabled solely as the simplest command-capable environment.
- The report permits any of four affected translation keys. This minimal deterministic plan uses `commands.clear.success.single`; the other listed keys can be tested independently by replacing only that key in the otherwise identical command.
- The supplied command does not provide values for the translation string's substitution fields. This plan preserves the command exactly instead of inventing additional translation arguments.
