REPRODUCTION TARGET

Version: Minecraft Java Edition 1.18.1

Environment: Unmodified Minecraft Java Edition 1.18.1 client; local singleplayer Creative-mode world; English (US) language; default resource pack; no graphics-altering mods, shaders, or custom resource packs.

PRECONDITIONS

- Minecraft Java Edition 1.18.1 is installed and can be selected as a separate launcher installation.
- The executor can create and enter a local singleplayer world.
- Use a mouse and keyboard, or equivalent bound controls, that can left-click menu buttons and hold the pointer stationary over a button.
- Keep the window large enough that the complete Video Settings screen and its tooltips can be displayed.
- Do not use mods, shaders, or resource packs that alter block rendering or option text.

STEPS TO REPRODUCE

1 **REPORT**

In the Minecraft Launcher, select or create an installation that uses Java Edition version 1.18.1, launch it, and wait for the main menu to finish loading.

INPUT 1.18.1

SUCCESS CUE The Minecraft main menu is responsive and identifies the running version as 1.18.1.

2 **INFERRED**

Set the game language to English (US) so the English graphics tooltip cited by the report is used. From the main menu, open Options, select Language, choose English (US), and click Done.

INPUT English (US)

SUCCESS CUE The main-menu and option labels are displayed in English.

3 **INFERRED**

Open Singleplayer, select Create New World, change Game Mode to Creative, and create the world. No particular seed is required by the report.

INPUT Game Mode: Creative

SUCCESS CUE World generation begins for a new Creative-mode world.

4 **INFERRED**

Wait without opening another menu until terrain has rendered around the player and movement responds normally.

SUCCESS CUE The player can move and look around normally, with nearby terrain fully rendered.

5 **INFERRED**

Press E to open the Creative inventory. Use the Search Items tab and search one at a time for Oak Leaves, Ice, White Stained Glass, Slime Block, and Honey Block. Place one stack of each item into separate hotbar slots. The hotbar is the nine-slot row at the bottom of the inventory and game screen.

INPUT oak leaves; ice; white stained glass; slime block; honey block

SUCCESS CUE Oak Leaves, Ice, White Stained Glass, Slime Block, and Honey Block are present in separate hotbar slots.

6 **INFERRED**

Press E to close the inventory. In an open, well-lit location, select each prepared hotbar item in turn and right-click the ground or an existing block face to place one sample of each block in a horizontal row. Leave enough space and choose a viewing angle that allows the player to see a face of every sample, preferably with open sky or distant terrain behind them.

SUCCESS CUE A row containing Oak Leaves, Ice, White Stained Glass, a Slime Block, and a Honey Block is placed and visible.

7 **INFERRED**

Position the player several blocks in front of the row and aim the camera so all five block samples are simultaneously visible. Avoid changing this viewing position unnecessarily during the graphics comparison.

SUCCESS CUE All five test blocks are within the current view and their chunks are fully rendered.

8 **INFERRED**

Press Esc, click Options, and click Video Settings. Find the button whose label begins with Graphics. If it is not already set to Fancy, left-click it repeatedly until its complete label reads Graphics: Fancy; the option may cycle through more than two graphics modes.

INPUT Graphics: Fancy

SUCCESS CUE The Video Settings screen is open and the graphics button reads Graphics: Fancy.

9 **INFERRED**

Return to the world by clicking Done on the Video Settings screen, clicking Done on the Options screen, and clicking Back to Game on the pause menu. Look at the prepared block row once to establish the pre-Fast rendering reference without moving or replacing the blocks.

SUCCESS CUE Gameplay has resumed with all five prepared blocks visible while Graphics remains set to Fancy.

10 **REPORT**

Press Esc, click Options, and click Video Settings again.

SUCCESS CUE The Video Settings screen is open and its option buttons are responsive.

11 **REPORT**

Locate the Graphics button in the Video Settings screen. Confirm that this is the button currently labeled Graphics: Fancy before changing it.

INPUT Graphics: Fancy

SUCCESS CUE The cursor can be positioned over the Graphics button and the button currently identifies the Fancy setting.

12 **REPORT**

Left-click the Graphics button as many times as necessary until its label reads Graphics: Fast. Stop clicking as soon as Fast is selected.

INPUT Graphics: Fast

SUCCESS CUE The graphics button visibly reads Graphics: Fast.

13 **REPORT**

Move the mouse pointer away from the Graphics button, then place it over the Graphics: Fast button and keep it stationary until the graphics-setting tooltip panel appears. Do not change the setting while the tooltip is displayed.

SUCCESS CUE A tooltip panel is visible for the Graphics: Fast button, and the button still reads Graphics: Fast.

14 **REPORT**

Exit the settings menus by clicking Done on the Video Settings screen, clicking Done on the Options screen, and clicking Back to Game on the pause menu.

SUCCESS CUE The player has returned to gameplay with Graphics still set to Fast.

15 **REPORT**

Face the previously prepared row from approximately the same position and viewing angle used under Fancy. Keep the view steady until the Oak Leaves, Ice, White Stained Glass, Slime Block, and Honey Block have all rendered under the Fast setting.

SUCCESS CUE All five prepared block types are simultaneously visible, surrounding chunks are loaded, and movement is responsive.

16 **INFERRED**

Press Esc, open Options, and open Video Settings one final time so the text-related trigger can be presented to the observation subsystem after the rendering comparison setup has been completed.

SUCCESS CUE The Video Settings screen is open again.

17 **INFERRED**

Verify that the Graphics button still reads Graphics: Fast. If another value is shown, left-click the button until Fast is restored.

INPUT Graphics: Fast

SUCCESS CUE The graphics button reads Graphics: Fast.

18 **INFERRED** **TRIGGER**

Move the pointer off the Graphics button, then place it over Graphics: Fast and hold the pointer stationary until the tooltip is fully visible. Leave the cursor and menu unchanged for the observation handoff.

SUCCESS CUE The Graphics: Fast tooltip is fully visible and remains on screen without the cursor moving.

HANDOFF TO OBSERVATION

Minecraft Java Edition 1.18.1 is displaying the Video Settings screen with Graphics set to Fast, the cursor is stationary over that button, and its tooltip is fully visible. The prepared leaf and comparison-block row has already been rendered once under Fancy and once under Fast. Begin observation while the tooltip remains visible.

UNCERTAINTIES

- The report does not specify a required world seed, terrain location, or game mode. A new Creative-mode world and manually placed test blocks are used only to make the rendering comparison deterministic.
- The report does not explicitly specify the game language. English (US) is selected because the report provides an English translation string and wording is the subject of the issue.
- The formal reproduction steps identify leaves but do not define an exhaustive set of other block families to test. Ice, stained glass, slime blocks, and honey blocks are included as representative comparisons because the report discusses them, but this selection alone is not an exhaustive survey of every block.
- The exact delay before the tooltip appears can depend on input timing; the executable condition is to keep the cursor stationary until the tooltip is visible.
- The final reopening and re-hovering of the Graphics button repeats the report's tooltip action so the observation subsystem receives the game in the exact text-trigger state rather than after the menu has been closed.
