REPRODUCTION TARGET

Version: Minecraft Java Edition 1.19.4
Environment: Local single-player Java Edition world using the integrated server, with the client language set to English (US), chat visible, and commands enabled. Use Creative mode as a practical way to ensure commands are available. No specific seed, coordinates, dimension, world type, or graphics settings are required.

PRECONDITIONS

- Install and launch the unmodified Minecraft Java Edition 1.19.4 client, which the report explicitly lists as affected.
- Set the game language to English (US) so the translation keys render as the English descriptions quoted by the report.
- Have a single-player world available in which the player can execute permission-level commands. For a new test world, using Creative mode with commands allowed is the simplest setup.
- Ensure chat messages are visible rather than hidden.
- Use the two representative translation keys in this plan as a deterministic comparison:
gamerule.forgiveDeadPlayers.description is from the report's group whose displayed text ends with punctuation, while gamerule.doLimitedCrafting.description is from the group whose displayed text is listed without concluding punctuation.

STEPS TO REPRODUCE

1 **REPORT**

Start the Minecraft Launcher, select the Java Edition installation for version 1.19.4, and launch the game. Do not use 1.20 Pre-release 1 or a later version because the report identifies 1.20 Pre-release 1 as the fix version.

SUCCESS CUE The Minecraft Java Edition main menu is open and the displayed version is 1.19.4.

2 **INFERRED**

From the main menu, open Options, then Language, select English (US), and confirm the selection with Done. Return to the main menu.

INPUT Options -> Language -> English (US) -> Done

SUCCESS CUE The menus are displayed in English (US), and the main menu is visible again.

3 **INFERRED**

Select Singleplayer. Either open an existing disposable world with commands enabled or select Create New World and configure a disposable test world. If creating a world, select Creative game mode and ensure commands are allowed, then create the world. The world name and seed do not matter.

INPUT

Singleplayer -> Create New World -> Game Mode: Creative -> Allow Commands: ON -> Create New World

SUCCESS CUE The player has entered a world in which in-game commands can be executed.

4 **INFERRED**

Wait before entering commands. Continue only after the terrain around the player has rendered and normal movement responds without world-loading delay.

SUCCESS CUE Surrounding chunks are rendered and the player can move normally.

5 **REPORT**

Press the Open Chat control, which is T by default. Type the report's tellraw command using gamerule.forgiveDeadPlayers.description as the translation key. Include the leading slash, preserve capitalization, and do not add spaces inside the JSON value.

INPUT /tellraw @s {"translate":"gamerule.forgiveDeadPlayers.description"}

SUCCESS CUE The complete command is present in the chat input field and has not yet been executed.

6 **REPORT**

Press Enter once to execute the command. Do not clear the chat afterward.

INPUT Enter

SUCCESS CUE A translated gamerule-description message has appeared in the player's chat overlay.

7

REPORT

Press T again to reopen chat. Type the same tellraw command, this time replacing the translation key with `gamerule.doLimitedCrafting.description`. Include the leading slash and enter the command exactly as shown.

INPUT `/tellraw @s {"translate":"gamerule.doLimitedCrafting.description"}`

SUCCESS CUE The second complete command is present in the chat input field and has not yet been executed.

8

REPORT

TRIGGER

Press Enter once to execute the second command. Stop issuing commands and leave the chat messages visible for inspection.

INPUT `Enter`

SUCCESS CUE The second translated gamerule-description message has appeared, and both representative description messages are available in the chat history for end-of-string inspection.

HANDOFF TO OBSERVATION

The two representative gamerule description translation keys have just been rendered in English through separate `/tellraw` commands, with the chat history still visible. Hand control to the observation subsystem to inspect and compare the concluding characters of the two displayed strings.

UNCERTAINTIES

- The title and description characterize the affected strings as being within the world creation menu, but the report's formal reproduction procedure displays the same translation keys through `/tellraw`. This plan preserves and operationalizes the command-based procedure rather than substituting a direct world-creation-menu procedure.
- The report says that any listed affected string can be displayed. Using one key from each punctuation group is a practical deterministic choice so that the relevant strings can be compared without executing every key in the table.
- Creative mode and a new disposable single-player world are not stated as requirements by the report; they are practical setup choices for obtaining permission to execute `/tellraw`. Any environment in which the player can successfully execute that command should be equivalent for this reproduction route.
