REPRODUCTION TARGET

Version:

Minecraft Java Edition 1.19.3

Environment:

A local singleplayer world running Minecraft Java Edition 1.19.3, with the game language set to English (US) and commands/cheats enabled. Creative mode is recommended only as the simplest way to prepare a disposable command-enabled test world; the report does not require a particular game mode, seed, coordinates, dimension, or server type.

PRECONDITIONS

- Use an affected Java Edition version. Minecraft Java Edition 1.19.3 is recommended because it is a stable release explicitly listed in the report's affected versions; 1.19.2 and snapshot 22w45a are also listed as affected.
- Set the game language to English (US) so the displayed translation matches the English text documented in the report.
- Load a singleplayer world in which the player is permitted to execute commands. For a new disposable test world, selecting Creative mode and enabling cheats is a practical setup choice.
- No datapack, resource pack, specific seed, coordinates, structure, item, entity, or dimension is required.
- Keep the in-game chat display visible after executing the command so the separate observation subsystem can inspect the generated translated message.

STEPS TO REPRODUCE

1 **REPORT**

Launch the Minecraft Launcher, select an installation for Minecraft Java Edition 1.19.3, and start the game. Do not use a newer version for this reproduction run.

SUCCESS CUE The Java Edition title screen is visible and identifies the running version as 1.19.3.

2 **INFERRED**

From the title screen, open Options, then Language, select English (US), and confirm the selection by pressing Done until you return to the title screen.

INPUT Options -> Language -> English (US) -> Done

SUCCESS CUE The title-screen interface is displayed in English and English (US) is the selected language.

3 **INFERRED**

Open Singleplayer and create a disposable world with commands enabled. Creative mode is recommended for convenience. If the world-creation screen exposes a separate Allow Cheats setting, set it to ON before creating the world. An existing command-enabled world may be used instead.

INPUT

Singleplayer -> Create New World -> Game Mode: Creative -> Allow Cheats: ON -> Create New World

SUCCESS CUE The player has entered a singleplayer world in which commands can be executed.

4 **INFERRED**

Wait for initial world loading to finish before opening chat. Continue only after nearby terrain is rendered and normal player movement responds without a loading pause.

SUCCESS CUE The world is fully interactive, nearby chunks are visible, and player controls respond normally.

5 **INFERRED**

Press the Open Chat control, which is T by default, to open the in-game chat input field.

INPUT T

SUCCESS CUE The chat input field is open at the bottom of the screen and ready to accept a command.

6 **REPORT**

Enter the report-provided tellraw command with XYZ replaced by the affected translation key `commands.schedule.created.function`. Include the leading slash and preserve the JSON punctuation and quotation marks exactly.

INPUT /tellraw @s {"translate":"commands.schedule.created.function"}

SUCCESS CUE The complete command is present in the chat input field with no added spaces or missing quotation marks, braces, colon, slash, or translation-key segments.

7

REPORT

TRIGGER

Press Enter once to execute the command. Do not run additional commands or close the chat display after the translated line appears.

INPUT Enter

SUCCESS CUE The command is accepted and one translated tellraw message beginning with the wording for scheduling a function appears in the player's chat display. Because the supplied report command provides no translation arguments, substitution placeholders may remain visible; leave the resulting line unchanged for inspection.

HANDOFF TO OBSERVATION

The `/tellraw` command using the `commands.schedule.created.function` translation key has just been executed successfully, and the resulting translated message is visible in the English (US) in-game chat. Hand control to the observation subsystem before entering another command or closing the chat display.

UNCERTAINTIES

- The report permits any listed affected translation key rather than requiring a particular one. This plan selects `commands.schedule.created.function` as one concrete, deterministic example and does not imply that it is the only affected key.
- The report does not specify a game mode, seed, dimension, coordinates, or whether to use singleplayer or multiplayer. A disposable Creative singleplayer world with cheats enabled is a practical execution choice, not a claimed bug requirement.
- The report's supplied `/tellraw` command does not provide values for the translation string's substitution placeholders. The plan preserves that command exactly except for replacing XYZ with the selected translation key, as instructed by the report; placeholder rendering may therefore remain literal or otherwise indicate absent arguments.
- The report discusses multiple affected translation keys, but its reproduction instructions explicitly say to display any one of them. This minimum plan executes one affected key once and hands off immediately, avoiding unnecessary repeated messages.
