REPRODUCTION TARGET

Use version: 1.17 Pre-release 1

Affected versions (21):

- 1.17 Pre-release 1
- 1.17 Pre-release 3
- 1.17 Pre-release 4
- 1.17 Pre-release 5
- 1.17 Release Candidate 1
- 1.17 Release Candidate 2
- 1.17
- 1.17.1 Pre-release 1
- 1.17.1 Pre-release 2
- 1.17.1 Pre-release 3
- 1.17.1 Release Candidate 1
- 1.17.1
- 21w38a
- 1.18 Pre-release 1
- 1.18 Pre-release 8
- 1.18 Release Candidate 3
- 1.18
- 1.18.1
- 22w05a
- 1.18.2
- 22w14a

Environment: Minecraft Java Edition 1.17 Pre-release 1 in a fresh vanilla single-player world, using the English (US) language, with commands permitted. Creative mode with cheats enabled is used as the simplest deterministic environment. Do not use the fix version 22w15a or a resource pack that replaces English advancement text.

PRECONDITIONS

- The launcher can start the exact affected version 1.17 Pre-release 1; some launcher interfaces identify this version as 1.17-pre1.
- The client language is English (US), because the report identifies English translation strings and capitalization.
- No resource pack or data pack is installed that changes vanilla advancement titles or descriptions.
- Use a fresh single-player world so the selected target advancement has not already been granted.
- The player has permission to execute commands; the practical setup below uses Creative mode with cheats enabled.
- The report permits granting any listed affected advancement. This plan selects the first listed advancement, `minecraft:adventure/lightning_rod_with_villager_no_fire`, as the deterministic representative case.

STEPS TO REPRODUCE

1 REPORT

Start Minecraft Java Edition using the installation configured for 1.17 Pre-release 1. At the title screen, verify the displayed version before continuing; do not continue if a different release, pre-release, release candidate, or snapshot is running.

INPUT Launch Minecraft Java Edition 1.17 Pre-release 1

SUCCESS CUE The Minecraft title screen is loaded and its version label identifies 1.17 Pre-release 1, potentially using the shorter form 1.17-pre1.

2 INFERRED

Set the game language to English (US). From the title screen, open Options, open Language, select English (US), and confirm with Done until you return to the title screen.

INPUT Options... -> Language... -> English (US) -> Done -> Done

SUCCESS CUE The title-screen buttons and other interface text are displayed in English.

3 INFERRED

Create a fresh single-player world. Select Creative game mode and ensure commands are permitted by setting Allow Cheats to ON, then create the world. The world name, seed, difficulty, and world type are not specified by the report and may remain at their defaults.

INPUT

Singleplayer -> Create New World -> Game Mode: Creative -> Allow Cheats: ON -> Create New World

SUCCESS CUE The player enters a newly created world in Creative mode, with the hotbar and crosshair visible.

4 INFERRED

Wait for initial world loading to finish before executing the advancement command. Do not continue while the loading screen is present or while nearby terrain is still failing to render.

SUCCESS CUE Nearby terrain is rendered, the player can look or move normally, and opening interfaces responds without loading delay.

5 REPORT

Press T to open in-game chat. Enter the report's first affected advancement command exactly as supplied, including the leading slash, and press Enter. Execute it as the local player, not from a server console, so @s selects the player whose advancement screen will be inspected.

INPUT /advancement grant @s only minecraft:adventure/lightning_rod_with_villager_no_fire

SUCCESS CUE Chat confirms that the advancement was granted to the player, and a completion notification for the advancement titled "Surge Protector" may appear.

6 VERIFIED

Open the Advancements interface by pressing the default Advancements key, L. If that control has been rebound or does not open the interface, press Esc and click Advancements from the pause menu instead.

INPUT L; fallback: Esc -> Advancements

SUCCESS CUE The full-screen Advancements interface is open and at least the Adventure advancement tab is available.

7

VERIFIED

Select the Adventure tab. If the interface opened on another tab, click the tab whose root advancement is titled “Adventure.”

INPUT Left-click the Adventure tab

SUCCESS CUE The Adventure advancement tree is displayed, with the completed advancement path containing “Surge Protector” available in the tree.

8

VERIFIED

TRIGGER

Locate the completed advancement titled “Surge Protector.” It is a direct child of the Adventure root. If necessary, hold the left mouse button on an empty part of the advancement background and drag to pan the tree. Move the pointer over advancement tiles until the title “Surge Protector” is shown, then leave the pointer stationary over that tile so its title-and-description tooltip remains open. Do not evaluate or rewrite the description.

INPUT Left-click-drag to pan if needed, then mouse-hover over “Surge Protector”

SUCCESS CUE The “Surge Protector” tooltip is fully visible and includes its advancement description beneath the title.

HANDOFF TO OBSERVATION

The English (US) Advancements interface is open on the Adventure tab, and the pointer is stationary over the completed “Surge Protector” advancement with its description tooltip fully visible. The observation subsystem should take control at this point.

UNCERTAINTIES

- The report does not explicitly name the client language. English (US) is selected because the reported translation keys are paired with English strings whose capitalization is under test.
- The report allows any of nine affected advancements to be granted. To avoid unnecessary repetition, this plan uses the first supplied command and the corresponding “Surge Protector” advancement as a deterministic representative.
- The report does not require a particular game mode, seed, coordinates, or server type. A fresh Creative single-player world with cheats enabled is a practical execution choice rather than a reported requirement.
- The exact launcher-facing label may be shortened to 1.17-pre1 even though the affected-version string in the report is 1.17 Pre-release 1.
- Advancement tile positions can vary with window dimensions and GUI scale, so no fixed screen coordinates are supplied; the executor must identify the tile by its “Surge Protector” title.
