

Chorus flowers can be destroyed by projectiles in adventure mode

[MC-225364](#) PROJECTILES

Status	Resolved / Fixed
Affected	1.16.5; 21w19a; 1.17; 1.17.1; 21w37a; 1.18.1; 1.18.2; 1.19; 1.19.1; 1.19.3; 23w03a; 1.19.4; 23w18a; 23w41a
Fixed in	23w42a
Reported	2021-05-12
Mojira category	Player; Projectiles

REPRODUCTION TARGET

Use version: 1.16.5

Affected versions (14):

1.16.5

21w19a

1.17

1.17.1

21w37a

1.18.1

1.18.2

1.19

1.19.1

1.19.3

23w03a

1.19.4

23w18a

23w41a

Environment:

Minecraft Java Edition 1.16.5 in a local single-player world. Use Creative mode with commands enabled for deterministic setup, then switch the player to Adventure mode before firing the projectile. A dedicated server and additional players are not required by the report.

PRECONDITIONS

- Install and launch the exact Java Edition version 1.16.5, which is the first version listed as affected.
- Create the test world with commands available. Selecting Creative mode during world creation is sufficient for this setup.
- Use the default controls described below, or the equivalent controls if the key bindings have been changed.
- Perform the test inside the world border in a clear location where the chorus flower is unobstructed and can be directly targeted.
- Do not use the listed fix version 23w42a for this reproduction.

STEPS TO REPRODUCE

1 INFERRED

From the Minecraft 1.16.5 title screen, select Singleplayer, choose Create New World, set Game Mode to Creative, and create the world. Wait for world generation and chunk loading to finish before continuing.

SUCCESS CUE The player is standing in a responsive single-player world in Creative mode, nearby terrain is rendered, and movement works normally.

2 INFERRED

Move to a clear, open part of the world with enough room to place one support block and stand several blocks away from it. Avoid placing the target against a wall or behind vegetation.

INPUT Use W/A/S/D to move and Space to jump or fly as needed.

SUCCESS CUE There is an unobstructed patch of ground and a clear firing line several blocks long.

3 INFERRED

Open in-game chat, enter the command exactly as shown including the leading slash, and submit it to obtain one end stone block for supporting the chorus flower.

INPUT `/give @s minecraft:end_stone 1`

SUCCESS CUE Command feedback reports that end stone was given, and an end stone item is present in the inventory or hotbar.

4 INFERRED

Open chat again and execute the exact command to obtain one chorus flower.

INPUT `/give @s minecraft:chorus_flower 1`

SUCCESS CUE Command feedback reports that a chorus flower was given, and a chorus flower item is present in the inventory or hotbar.

5 INFERRED

Open chat again and execute the exact command to obtain a bow.

INPUT `/give @s minecraft:bow 1`

SUCCESS CUE Command feedback reports that a bow was given, and a bow is present in the inventory or hotbar.

6 INFERRED

Open chat again and execute the exact command to obtain arrows for the test.

INPUT `/give @s minecraft:arrow 16`

SUCCESS CUE Command feedback reports that arrows were given, and at least one arrow is present in the inventory.

7 INFERRED

Place the end stone support block. Select the hotbar slot containing end stone, point the crosshair at the top surface of the ground, and use the place/use action once.

INPUT Right-click once while holding `minecraft:end_stone`.

SUCCESS CUE One end stone block is visible above the surrounding ground, and its top face is unobstructed.

8 **REPORT**

Place the chorus flower on top of the end stone. Select the hotbar slot containing the chorus flower, center the crosshair on the end stone's top face, and use the place/use action once.

INPUT Right-click once while holding `minecraft:chorus_flower`.

SUCCESS CUE A chorus flower block is visibly attached to the top of the end stone.

9 **INFERRED**

Move approximately five blocks away from the placed chorus flower while keeping an unobstructed line of sight to it. Face the flower rather than the supporting end stone.

INPUT Use W/A/S/D as needed.

SUCCESS CUE The complete chorus flower is visible in front of the player, and no block or entity lies between the player and the flower.

10 **REPORT**

Switch from Creative mode to Adventure mode. Press T to open chat, enter the command exactly as shown including the leading slash, and press Enter.

INPUT `/gamemode adventure`

SUCCESS CUE Command feedback confirms that the player's game mode was set to Adventure Mode. The player remains facing or can turn back toward the chorus flower.

11 **REPORT**

Select the bow in the active hotbar slot. The active slot is the highlighted slot in the nine-slot bar at the bottom of the screen. Confirm that at least one arrow remains elsewhere in the hotbar or inventory.

INPUT

Press the number key corresponding to the bow's hotbar slot, or use the mouse wheel until the bow is held.

SUCCESS CUE The bow is visible in the player's hand, and at least one arrow is available in the inventory.

12 **INFERRED**

Aim directly at the chorus flower. Position the crosshair over the flower's cube-shaped block, not over the end stone below it. If necessary, adjust the player's position until the shot is unobstructed.

INPUT Move the mouse to center the crosshair on `minecraft:chorus_flower`.

SUCCESS CUE The crosshair is centered on the chorus flower with a clear line of fire.

13 **REPORT**

Draw the bow fully while keeping the crosshair on the chorus flower. Do not release the use control until the bow reaches its fully drawn appearance.

INPUT Press and hold right-click.

SUCCESS CUE The bow is visibly fully drawn, the crosshair remains on the chorus flower, and the player is ready to release the arrow.

14 **REPORT** **TRIGGER**

Release the bow's use control once so that one arrow is fired directly into the chorus flower. Do not fire additional arrows or interact with the target after this impact.

INPUT Release right-click.

SUCCESS CUE The arrow has left the bow and reached the chorus flower's block position; immediately hand control to the observation subsystem.

HANDOFF TO OBSERVATION

One arrow has just directly impacted the placed chorus flower while the shooter is in Adventure mode. No subsequent movement, block interaction, or additional shot has been performed; begin observation immediately.

UNCERTAINTIES

- The report does not specify a seed, dimension, coordinates, or server type. This plan uses a local single-player Overworld and an arbitrary clear location because none of those properties is stated as required.
- The report does not specify how to obtain the blocks, bow, and arrows. Commands are used as a deterministic setup method and are not themselves stated as reproduction requirements.
- The report says to place a chorus flower but does not describe its support. This plan uses end stone so the flower can be placed as a standalone target.
- The report does not specify the distance from which to shoot or the bow's draw strength. Approximately five blocks and a fully drawn bow are selected to make a direct hit reliable.
- The report also refers more generally to projectiles in a later comment, but the original reproduction specifically calls for a bow and arrows, so this plan uses an arrow fired from a bow.
