

Arrows and tridents get stuck on players and mobs

MC-302678 PROJECTILES

Status	Resolved / Fixed
Affected	25w41a; 25w42a; 25w43a
Fixed in	25w44a
Reported	2025-10-09
Mojira category	Combat; Items; Projectiles

REPRODUCTION TARGET

Use version:

25w41a

Affected versions (3):

25w41a

25w42a

25w43a

Environment:

Minecraft: Java Edition snapshot 25w41a, vanilla client, single-player integrated server, one local player, new Creative-mode Superflat world with commands enabled. Use an isolated or disposable snapshot world and do not test in the fix version 25w44a.

PRECONDITIONS

- Install and select the exact Minecraft: Java Edition snapshot 25w41a in the Minecraft Launcher. Enable snapshot versions in the launcher's Installations screen if 25w41a is not available.
- Use a vanilla client without gameplay mods, server plugins, or datapacks that alter entities, projectiles, combat, attributes, or tridents.
- Use a new disposable world rather than upgrading an important existing world.
- Have keyboard-and-mouse controls available. The instructions name default controls; if controls are rebound, use the binding for the same action.
- The reproduction uses a stationary iron golem as the unspecified target mob. NoAI is used only to maintain the report's condition that the mob remains still underneath the trident.
- Use the unenchanted trident supplied by the command. Do not add Loyalty, Riptide, Channeling, Impaling, or other enchantments.

STEPS TO REPRODUCE

1 VERIFIED

Start the Minecraft Launcher, select or create an installation whose version is exactly snapshot 25w41a, and launch the game. If creating an installation, open Installations, enable the Snapshots version filter, choose New Installation, select snapshot 25w41a as the version, save it, and launch that installation.

INPUT `Version: snapshot 25w41a`

SUCCESS CUE The Java Edition title screen is open and the lower-left version text identifies 25w41a.

2 INFERRED

From the title screen, select Singleplayer and create a new world. Set Game Mode to Creative, turn Allow Commands on, and select the Superflat world type under the world-generation settings. No particular seed is required. Select Create New World when the settings are complete.

INPUT `World name: MC-302678; Game Mode: Creative; Allow Commands: ON; World Type: Superflat`

SUCCESS CUE World generation begins using Creative mode in a flat test environment.

3 INFERRED

Wait after entering the world. Do not begin setup while the joining or terrain-loading screen is visible.

SUCCESS CUE The Superflat terrain is rendered around the player, the HUD is visible, and movement and camera rotation respond normally.

4 INFERRED

Press T to open in-game chat. Enter the summon command exactly as written, including the leading slash, and press Enter. The command places an iron golem eight blocks away along the positive Z axis and disables its AI so it remains still for the projectile test.

INPUT `/summon minecraft:iron_golem ~ ~ ~8 {NoAI:1b}`

SUCCESS CUE The command succeeds and exactly one stationary iron golem is visible near the player. A successful-command message may also appear in chat.

5 INFERRED

Locate the summoned iron golem by looking around the nearby flat area. Confirm that it remains in one position without walking. Do not attack, push, leash, ride, or otherwise move it.

SUCCESS CUE A living, motionless iron golem is available as the target and has not taken any test damage yet.

6 INFERRED

Press T to open in-game chat again. Enter the give command exactly as written, including the leading slash, and press Enter.

INPUT `/give @s minecraft:trident 1`

SUCCESS CUE The command succeeds and one unenchanted trident is present in the player's inventory or hotbar.

7 INFERRED

If the trident is not already in the hotbar, press E to open the inventory. Locate the trident, then left-click it and left-click one of the nine slots along the bottom row to place it there. Press E again to close the inventory.

SUCCESS CUE The inventory is closed and the trident icon is visible in one of the nine hotbar slots at the bottom of the screen.

8 **INFERRED**

Select the hotbar slot containing the trident by pressing its corresponding number key, 1 through 9, or by scrolling the mouse wheel until that slot is highlighted. Do not put the trident in the offhand.

SUCCESS CUE The trident's hotbar slot has the selection outline and the player visibly holds the trident in the main hand.

9 **INFERRED**

Using the movement controls, stand approximately 6 to 10 blocks from the stationary iron golem with no blocks or entities between the player and the golem. Stop moving and place the crosshair over the center of the golem's torso so the thrown trident will strike the body rather than the ground.

INPUT Default movement controls: W, A, S, and D; camera: mouse

SUCCESS CUE The player is stationary, has a clear line of sight to the stationary iron golem, and the crosshair is centered on its torso.

10 **VERIFIED** **TRIGGER**

While keeping the crosshair centered on the iron golem's torso, press and hold the Use Item control, which is right mouse button by default, for about two seconds so the trident is fully readied. Release the button to throw the trident. Keep the target centered and do not move the iron golem while the projectile travels. Continue only until the trident makes initial contact with the golem; do not retrieve the trident or perform another attack.

INPUT Hold right mouse button for about 2 seconds, then release

SUCCESS CUE The unenchanted trident has been released as a projectile and has just made initial contact with the stationary iron golem's body.

HANDOFF TO OBSERVATION

The unenchanted trident has just struck the stationary iron golem in snapshot 25w41a. The NoAI target remains in its original position, and the player has not retrieved the trident, attacked again, or otherwise disturbed the target. Begin observation immediately from this state.

UNCERTAINTIES

- The report contains no formal Steps to Reproduce and does not specify a game mode, world type, seed, coordinates, target mob species, distance, or exact impact location.
- The stationary iron golem, Creative Superflat world, and setup commands are deterministic practical choices used to implement the report's instruction to throw a trident into a mob that remains still; they are not explicit report requirements.
- The phrase 'if mob is still under the trident' does not define a required projectile angle or contact point. This plan uses a direct horizontal throw into the center of a stationary mob's torso.
- The report title and comments also describe arrows, players, and shield interactions, but the description directly supplies only the trident-versus-mob path. This plan reproduces that primary path and does not add the shield variants.
- The supplied attachment images were not viewable in the report text, so no positioning or setup details were inferred from them.
- The report does not state how long observation must continue after impact. The plan hands control to the observation subsystem immediately after the first contact.
