

Villages replace ice with path blocks instead of wood

MC-198007 VILLAGE SYSTEM

Status	Resolved / Fixed
Affected	1.16.2; 1.16.4; 20w51a; 21w03a; 21w05b
Fixed in	1.18 Pre-release 5
Reported	2020-08-14
Mojira category	Structures; Village system; World generation

REPRODUCTION TARGET

Version: Minecraft Java Edition 1.16.2

Environment: Single-player Minecraft Java Edition 1.16.2 world created directly in that version, using the Default world type, seed -7882263134696652088, Generate Structures enabled, Creative mode, and commands/cheats enabled.

PRECONDITIONS

- Install and launch the unmodified Minecraft Java Edition release 1.16.2; do not use 1.18 Pre-release 5 or a later version because the report lists 1.18 Pre-release 5 as the fix version.
- Create a new world directly in 1.16.2. Do not reuse a world whose target chunks were previously generated in another Minecraft version.
- Use the exact report seed: -7882263134696652088.
- Keep Generate Structures enabled so the village can generate.
- Enable commands by selecting Creative mode and ensuring Allow Cheats is ON; the supplied teleport command requires command permission.

STEPS TO REPRODUCE

1

REPORT

In the Minecraft Launcher, select the historical installation for Minecraft Java Edition release 1.16.2, and launch the game.

INPUT

release 1.16.2

SUCCESS CUE

The Minecraft main menu is open and displays version 1.16.2.

2

INFERRED

Select Singleplayer, then select Create New World to begin configuring a fresh world.

SUCCESS CUE

The Create New World configuration screen is open.

3

INFERRED

Set Game Mode to Creative. Ensure Allow Cheats is set to ON so the report's teleport command can be executed.

INPUT

Game Mode: Creative; Allow Cheats: ON

SUCCESS CUE

The world-creation screen shows Creative mode and Allow Cheats: ON.

4 **REPORT**

Select More World Options and enter the report's seed into the seed field. Preserve the leading minus sign and every digit.

INPUT `-7882263134696652088`

SUCCESS CUE The seed field contains exactly -7882263134696652088.

5 **INFERRED**

On the same options screen, leave World Type set to Default and verify that Generate Structures is ON.

INPUT `World Type: Default; Generate Structures: ON`

SUCCESS CUE The options show the Default world type with structure generation enabled.

6 **INFERRED**

Select Done if necessary to return to the main world-creation screen, then select Create New World.

SUCCESS CUE Minecraft begins generating and loading the new world.

7 **INFERRED**

Wait at the initial spawn point until the loading screen has closed, nearby terrain is rendered, and movement responds normally.

SUCCESS CUE The player is in the Overworld and the initial terrain has finished loading sufficiently for chat and movement to respond.

8 **INFERRED**

Press T, or the currently bound Open Chat control, to open in-game chat.

INPUT `T`

SUCCESS CUE The chat input field is open and ready to accept a command.

9 **REPORT** **TRIGGER**

Enter the report's teleport command exactly as written, including the leading slash, dimension, coordinates, yaw, and pitch. Press Enter once to execute it.

INPUT `/execute in minecraft:overworld run tp @s -135.95 63.00 -303308.65 -178.50 22.50`

SUCCESS CUE The player is teleported a very large distance to the report location in the Overworld, with the command-provided viewing rotation applied.

10 **INFERRED**

Do not move, rotate, place, or break blocks after teleporting. Wait until the destination chunks and village terrain have rendered, the loading pause has ended, and controls respond normally.

SUCCESS CUE The destination terrain is fully visible, no loading screen is present, and the game responds normally while the player remains at the teleported position.

11 INFERRED

Press F3 to open the debug overlay and verify that the player is in the Overworld near X -135.95, Y 63.00, Z -303308.65. Then press F3 again to close the overlay without moving or changing the camera direction.

INPUT F3

SUCCESS CUE The reported destination coordinates and Overworld dimension have been verified, and the unobstructed game view is restored.

12 REPORT

Leave the player at the command-set position and viewing rotation. Confirm that the generated village area and the nearby frozen water or ice terrain associated with its path are loaded in the view; do not modify any blocks before handing control to the observation subsystem.

SUCCESS CUE The target village terrain, including the path area adjacent to or crossing the frozen water body, is loaded and available for visual inspection in its untouched generated state.

HANDOFF TO OBSERVATION

The teleport has generated or loaded the target village chunks in Minecraft Java Edition 1.16.2. The player remains near X -135.95, Y 63.00, Z -303308.65 with yaw -178.50 and pitch 22.50, and the untouched village path and frozen-water area are fully rendered. Begin observation of the generated blocks.

UNCERTAINTIES

- The report does not state a game mode. Creative mode with cheats is used as a practical execution choice because the supplied teleport command requires permission and Creative mode avoids unrelated survival hazards.
- The report does not name a specific village building, path segment, or individual block coordinate. The supplied player coordinates and camera rotation are therefore preserved exactly and treated as the intended inspection viewpoint.
- The attached screenshots are referenced by the report but their visual contents were not supplied, so they cannot be used to further distinguish the precise path segment.
- The report lists several affected versions. Release 1.16.2 is recommended because it is explicitly listed as affected and was independently confirmed in the supplied Mojira comments.
