

One farmland block in plains_large_farm_1 has moisture level 0

MC-199162 VILLAGE SYSTEM

Status	Resolved / Fixed
Affected	1.16.2; 1.16.3 Release Candidate 1; 1.19; 1.19.1 Pre-release 5; 1.19.2
Fixed in	22w42a
Reported	2020-08-28
Mojira category	Structures; Village system

REPRODUCTION TARGET

Version: Minecraft Java Edition 1.19.2

Environment: A new single-player Creative-mode Superflat world in Minecraft Java Edition 1.19.2, with commands enabled. A Superflat world and disabled random block ticks are practical choices that make the placed template easy to access and preserve its initial farmland states; they are not stated requirements of the report.

PRECONDITIONS

- Launch the exact Java Edition version 1.19.2. This is an affected release in which the report explicitly confirms the supplied /place command reproduction.
- Use a disposable test world rather than an important existing world.
- The player must have permission to execute commands. In single-player, create the world in Creative mode with Allow Cheats enabled.
- No particular world seed, biome, naturally generated village, datapack, resource pack, or dedicated server is required by the report.
- Use the exact structure template identifier minecraft:village/plains/houses/plains_large_farm_1.
- Perform the placement only after setting randomTickSpeed to 0 if preserving the template's initial block states for inspection is desired. This is a practical determinism measure, not a requirement stated by the report.

STEPS TO REPRODUCE

1

REPORT

Start the Minecraft Launcher, select the installation for Minecraft Java Edition 1.19.2, and launch the game. Do not use 1.19.3 or a later version for this reproduction.

INPUT

Minecraft Java Edition 1.19.2

SUCCESS CUE

The Minecraft title screen is open and displays version 1.19.2.

2

INFERRED

From the title screen, open Singleplayer and select Create New World.

INPUT

Singleplayer -> Create New World

SUCCESS CUE

The Create New World configuration screen is open.

3 **INFERRED**

Configure the test world for Creative mode and ensure commands are permitted. Open More World Options and change World Type to Superflat so the structure can be placed in an unobstructed area. No specific seed is needed.

INPUT `Game Mode: Creative; Allow Cheats: ON; World Type: Superflat`

SUCCESS CUE The new world is configured as Creative, commands are allowed, and the selected world type is Superflat.

4 **INFERRED**

Select Create New World and wait for world generation and chunk loading to finish. Do not continue while the loading screen is visible.

INPUT `Create New World`

SUCCESS CUE The player is in the world, nearby flat terrain is rendered, and movement responds normally.

5 **INFERRED**

Remain on level, unobstructed ground. If the spawn location contains an obstruction, use the movement controls to move to a clear section of the Superflat terrain before placing the template.

INPUT `Default movement controls: W, A, S, and D`

SUCCESS CUE The player is standing in a clear area with enough unobstructed terrain for a large farm template to appear.

6 **INFERRED**

Press T to open in-game chat. Enter the command that disables random block ticks, including the leading slash, and press Enter. This preserves the block states initially placed by the structure template while the observation subsystem examines them.

INPUT `/gamerule randomTickSpeed 0`

SUCCESS CUE The command is accepted without a red syntax or permission error, and randomTickSpeed is set to 0.

7 **INFERRED**

Wait until chat has closed and the game view responds normally. Keep the player in the same clear placement area.

SUCCESS CUE The normal game view is visible, the player remains in the clear area, and controls are responsive.

8 **INFERRED**

Press T to open in-game chat for the structure placement command.

INPUT `T`

SUCCESS CUE The chat input field is open and ready to receive a command.

9 **REPORT**

Type the report's structure placement command exactly as supplied, including the leading slash. Do not alter the structure identifier, add coordinates, or substitute another village farm template.

INPUT `/place template minecraft:village/plains/houses/plains_large_farm_1`

SUCCESS CUE The complete command is visible in the chat input field exactly as specified and has not yet been submitted.

10 **REPORT** **TRIGGER**

Press Enter once to execute the structure placement command.

INPUT Enter

SUCCESS CUE The command is accepted without a red syntax or permission error, and the plains large farm template is placed at the command's placement position.

11 **INFERRED**

Wait until all blocks of the placed structure have rendered and player movement responds normally. Do not repeatedly execute the placement command.

SUCCESS CUE A single plains large farm structure containing farmland, crops, water, and its associated farm layout is fully visible and the game is responsive.

12 **INFERRED**

If the structure obstructs the player's view, use Creative flight to move above or beside it without breaking, placing, trampling, or otherwise updating any farm blocks. With default controls, double-tap Space to begin flying, hold Space to rise, and use W, A, S, or D to obtain an unobstructed view.

INPUT Double-tap Space; then Space and W/A/S/D as needed

SUCCESS CUE The player has an unobstructed view of the placed farm, no farm blocks have been deliberately interacted with, and randomTickSpeed remains 0.

HANDOFF TO OBSERVATION

The command has placed exactly one minecraft:village/plains/houses/plains_large_farm_1 template, the entire farm has rendered, random block ticks remain disabled, and the player is positioned to inspect the farm without having modified its blocks. Hand control to the observation subsystem for block-state inspection.

UNCERTAINTIES

- The report does not identify the affected farmland block's coordinates or relative position within the template. The observation subsystem will need to inspect the farmland blocks in the placed structure.
- The report explicitly confirms the supplied /place reproduction in 1.19 and 1.19.2 but does not supply an equivalent deterministic placement procedure for the affected 1.16.x versions; therefore, 1.19.2 is recommended.
- Creative mode, a Superflat world, and randomTickSpeed 0 are practical execution choices rather than requirements asserted by the report.
- The report does not specify a seed, biome, player coordinates, viewing direction, or required placement orientation.
