Status	Resolved / Fixed
Affected	1.19.1 Pre-release 6
Fixed in	1.19.1 Release Candidate 2
Reported	2022-07-21
Mojira category	Social Interactions

REPRODUCTION TARGET

Use version:

1.19.1 Pre-release 6

Affected versions (1):

1.19.1 Pre-release 6

Environment:

Minecraft: Java Edition graphical client running 1.19.1 Pre-release 6. Use a fresh single-player world in Creative mode with cheats enabled and normal command feedback visible. No dedicated server, additional players, seed, resource pack, or datapack is required by the report.

PRECONDITIONS

- Install and launch the exact affected Java Edition version listed by the report: 1.19.1 Pre-release 6. Do not use the fix version, 1.19.1 Release Candidate 2.
- Use the standard graphical game client because the reproduction requires the Take Screenshot control and an on-screen chat overlay.
- Create or load a world in which the player has permission to execute /tag. For a deterministic single-player setup, create a Creative-mode world with Allow Cheats enabled.
- Leave command feedback enabled so the /tag command produces the system-message control line required by the report.
- Ensure chat is not hidden. The chat overlay must be capable of displaying both command feedback and the screenshot-saved message.
- If controls have been rebound, identify the key assigned to the Take Screenshot action. Its default key is F2.

STEPS TO REPRODUCE

1 REPORT

Start the Minecraft Launcher, select an installation that runs Minecraft: Java Edition 1.19.1 Pre-release 6, and launch the game.

SUCCESS CUE The main menu identifies the running game as 1.19.1 Pre-release 6.

2 INFERRED

Open Singleplayer and create a fresh world. Set Game Mode to Creative and ensure Allow Cheats is enabled, then select Create New World. A specific world seed is not required.

SUCCESS CUE The player has spawned in the world and can use commands.

3 INFERRED

Wait before continuing until nearby terrain has rendered and player movement and controls respond normally.

SUCCESS CUE Surrounding chunks are visible and the client responds normally to movement input.

4 INFERRED

Press the Open Chat control, which is T by default, to place the cursor in the chat input field.

INPUT T

SUCCESS CUE The chat interface is open and an input field is ready to accept a command.

5 REPORT

Enter the report's tag command into in-game chat exactly as shown, including the leading slash, and press Enter to execute it.

INPUT /tag @s add test

SUCCESS CUE The command is accepted and the chat overlay displays feedback confirming that the tag named test was added to the executing player.

6 REPORT

Use the visible /tag command-feedback line as the control system message. Confirm that its gray color indicator is visible, and do not clear or hide the chat overlay before proceeding.

SUCCESS CUE The command-feedback system message remains visible with its gray color indicator, providing a nearby visual reference for the next message.

7 REPORT TRIGGER

Without leaving the world, invoke the Take Screenshot control once. Press F2 if the default key binding is still in use; otherwise press the key currently bound to Take Screenshot.

INPUT F2

SUCCESS CUE A screenshot is taken and a screenshot-saved message appears in the in-game chat overlay. Do not assess that message's color indicator yet.

HANDOFF TO OBSERVATION

The Take Screenshot control has just been pressed once, and the resulting screenshot-saved message is visible in the chat overlay near the earlier /tag command-feedback control message. Hand off immediately for visual inspection of the screenshot message.

UNCERTAINTIES

- The report does not specify single-player versus multiplayer, game mode, or world seed. A fresh Creative-mode single-player world with cheats enabled is selected as the simplest deterministic setup that permits the supplied command without adding unrelated server conditions.
- The report names F2 as the default Take Screenshot control but does not require the binding to remain unchanged; the bound Take Screenshot action is authoritative if controls were remapped.
- No web verification was needed because the report supplies the affected version, exact command, trigger action, default screenshot key, and required comparison message.
