Fixed in	24w36a
Reported	2013-10-27
Mojira category	Rendering; Textures and models

REPRODUCTION TARGET

Version: Minecraft Java Edition snapshot 24w33a
Environment: Vanilla singleplayer Minecraft Java Edition 24w33a, using Creative mode with commands enabled. Create a superflat world from the report's exact stained-glass preset. Use a render distance greater than 2 chunks; 8 chunks or more is recommended for a clear multi-chunk test.

PRECONDITIONS

- Configure the Minecraft Launcher to start the historical Java Edition snapshot 24w33a.
- Use an unmodified client without shaders, rendering mods, or custom resource packs, to avoid changing translucent-block rendering behavior.
- Use a keyboard capable of sending the F3+T debug shortcut. If the operating system treats F3 as a media key, be prepared to hold Fn while pressing F3+T.
- Keep the default teleport command syntax from the report unchanged, including the leading slash, relative Y coordinate, yaw, and pitch arguments.
- Do not move or rotate the camera between the specified teleport, resource-reload, and final teleport actions unless a step explicitly requests movement.

STEPS TO REPRODUCE

1 REPORT

Launch the Minecraft Java Edition installation configured for snapshot 24w33a. Do not substitute snapshot 24w36a or another version.

SUCCESS CUE The Minecraft main menu is open and identifies the running version as 24w33a.

2 INFERRED

Open the singleplayer world-creation screen by selecting Singleplayer and then Create New World.

SUCCESS CUE The Create New World screen is open.

3 INFERRED

Set the new world's game mode to Creative. Creative mode is used so the player can perform the report's required flight without obtaining equipment.

SUCCESS CUE The world-creation screen shows Game Mode: Creative.

4 INFERRED

Ensure commands are enabled for the world. If an Allow Commands option is shown under the additional world settings, set it to On; Creative worlds may already enable commands automatically.

SUCCESS CUE The new world is configured to permit in-game commands such as /tp.

5 REPORT

Open the World settings tab, change World Type to Superflat, select Customize, and then open the Presets screen.

SUCCESS CUE The Superflat Presets screen is open and contains an editable preset text field.

6 REPORT

Focus the preset text field, select and remove its entire existing contents, and paste the report's preset exactly. Do not add a version prefix, spaces, or line breaks.

INPUT

```
minecraft:bedrock,minecraft:green_stained_glass,minecraft:red_stained_glass,minecraft:blue_stained_glass;minecraft:the_void
```

SUCCESS CUE The preset text field exactly matches the supplied string, ending with minecraft:the_void.

7 REPORT

Apply the preset using Use Preset, then select Done to return to the world-creation screen. Leave the world type set to Superflat.

SUCCESS CUE The new world remains configured as Superflat with bedrock, green stained glass, red stained glass, and blue stained glass layers, with blue stained glass as the exposed top layer.

8 REPORT

Select Create New World and wait for world generation and initial loading to finish.

SUCCESS CUE The player is in the generated world, movement responds normally, and a flat blue-stained-glass surface extends across the loaded area.

9 **INFERRED**

Open the pause menu, navigate to Options and then Video Settings, and set Render Distance to at least 8 chunks. Return to the world without changing other graphics settings.

INPUT `Esc -> Options -> Video Settings -> Render Distance: 8 chunks or greater`

SUCCESS CUE The game view is open again with a render distance greater than 2 chunks.

10 **INFERRED**

Wait without performing the reproduction commands until the surrounding flat terrain has rendered throughout the visible distance and player controls respond normally.

SUCCESS CUE Multiple chunks of the blue stained-glass surface are visible and no nearby chunk-loading gaps remain.

11 **INFERRED**

Enter Creative flight by quickly pressing the jump control twice. The default jump control is Space.

INPUT `Space, Space`

SUCCESS CUE The player remains airborne instead of immediately falling back onto the glass surface.

12 **REPORT**

While flying, hold the jump control to ascend approximately 10 blocks above the blue stained-glass surface, as requested by the report.

INPUT `Hold Space until approximately 10 blocks above the surface`

SUCCESS CUE The player is hovering roughly 10 blocks above the blue stained-glass surface with several surrounding chunks visible.

13 **INFERRED**

Release the jump control and stop all movement while remaining in Creative flight. Do not rotate the camera before executing the first teleport.

SUCCESS CUE The player is hovering at a stable height and the camera is stationary.

14 **INFERRED**

Press T to open in-game chat. The command must be run from chat with its leading slash because this is a singleplayer reproduction.

INPUT `T`

SUCCESS CUE The chat input field is open and ready to receive a command.

15 **REPORT**

Enter the report's first teleport command exactly and press Enter. The relative ~ Y argument preserves the player's current elevated Y coordinate; 135 and 45 set the camera yaw and pitch.

INPUT `/tp @p 100 ~ 100 135 45`

SUCCESS CUE The command is accepted, the player teleports to X=100 and Z=100 at the same Y level, and the camera snaps to yaw 135 and pitch 45.

16 **INFERRED**

Keep all movement and look controls released. Wait until the destination terrain has rendered and the game responds normally, without deliberately moving or rotating the camera.

SUCCESS CUE The stained-glass terrain around X=100, Z=100 is visible, chunk loading has settled, and the camera still has the orientation established by the teleport command.

17 **REPORT**

Reload client resources by pressing F3 and T together. If F3 is intercepted as a media key, hold Fn and press F3+T instead. Release the keys after the reload begins.

INPUT F3+T

SUCCESS CUE The resource-reload screen or progress indicator appears, confirming that the F3+T action was recognized.

18 **REPORT**

Wait for the resource reload to finish and then continue waiting until the surrounding chunks have rendered again. Keep movement and look controls released throughout this wait.

SUCCESS CUE The normal world view has returned, the visible stained-glass terrain is loaded, and the game responds normally without the player having changed position or camera direction.

19 **INFERRED**

Press T to reopen in-game chat. Do not move or rotate the camera first.

INPUT T

SUCCESS CUE The chat input field is open while the player remains at X=100, Z=100 and at the elevated Y level.

20 **REPORT** **TRIGGER**

Enter the report's second teleport command exactly and press Enter. This command returns the player to X=0 and Z=0 while preserving Y, and changes the camera to yaw -45 and pitch 45.

INPUT /tp @p 0 ~ 0 -45 45

SUCCESS CUE The command is accepted, chat closes, and the player arrives at X=0 and Z=0 with the command-defined camera orientation.

21 **INFERRED**

Immediately release all controls and keep the player and camera stationary. Wait only until the destination frame and surrounding chunks are visible; do not press F3+T again, alter video settings, cross a chunk boundary, or approach the surface.

SUCCESS CUE The player is stationary above the stained-glass world at X=0, Z=0, with yaw -45 and pitch 45, and the destination terrain is ready for visual inspection.

HANDOFF TO OBSERVATION

The second teleport has just completed, and the player is stationary at $X=0$ and $Z=0$ at the preserved elevated Y coordinate, with yaw -45 and pitch 45 . The surrounding stained-glass chunks are visible, and no movement, camera rotation, resource reload, or graphics-setting change has occurred after the teleport. Hand control to the observation subsystem now.

UNCERTAINTIES

- The report specifies flying up only approximately 10 blocks and states that the exact amount does not matter much; no exact Y coordinate is required.
- The updated reproduction does not state a game mode. Creative mode is selected as a practical way to satisfy the explicit flight requirement.
- The updated reproduction does not specify a render distance. An older report comment states that the issue was not reproduced at 2 chunks but was reproduced above 2 chunks in 14w27b; using at least 8 chunks is a practical choice rather than an explicitly stated 24w33a requirement.
- No operating system, GPU, resolution, graphics mode, mipmap level, or other video setting is specified by the updated reproduction.
- World-creation menu labels can vary slightly between launcher or snapshot interfaces, but the exact superflat preset must not be changed.
