Fixed in	22w42a
Reported	2022-03-25
Mojira category	UI

REPRODUCTION TARGET

Version: Minecraft: Java Edition 1.19 (an affected release version explicitly confirmed in the report)
Environment: Vanilla Minecraft: Java Edition 1.19 in a local single-player world, using Creative mode and the standard keyboard-and-mouse Creative inventory interface. Any world seed and default world-generation settings may be used.

PRECONDITIONS

- Minecraft: Java Edition 1.19 is installed and selectable in the Minecraft Launcher.
- Use an unmodified client so that mods or datapacks do not add, remove, or reorder Creative inventory entries.
- A keyboard and mouse are available. The instructions use the default Inventory key, E; if controls are rebound, use the key assigned to Inventory instead.
- No particular world seed, biome, coordinates, difficulty, items, entities, or structures are required.

STEPS TO REPRODUCE

1 **REPORT**

In the Minecraft Launcher, select and launch the Java Edition 1.19 release profile. Do not create the test world in another Minecraft version.

INPUT `Minecraft: Java Edition 1.19`

SUCCESS CUE The Minecraft 1.19 main menu is displayed, with the version identified as 1.19.

2 **INFERRED**

Open the local world-selection screen from the main menu.

INPUT `Left-click "Singleplayer"`

SUCCESS CUE The Select World screen is displayed.

3 **INFERRED**

Start creating a new test world.

INPUT `Left-click "Create New World"`

SUCCESS CUE The Create New World configuration screen is displayed.

4 **REPORT**

Set the new world's game mode to Creative. Click the Game Mode control until it reads "Game Mode: Creative"; leave the seed and other settings at their defaults.

INPUT `Left-click the "Game Mode" control until it displays "Game Mode: Creative"`

SUCCESS CUE The world-creation screen explicitly displays "Game Mode: Creative".

5 **INFERRED**

Create the world, then wait until world generation and initial chunk loading finish. Do not continue while a loading screen is visible.

INPUT `Left-click "Create New World"`

SUCCESS CUE The player can move normally in the generated world and the Creative-mode hotbar is visible without a loading overlay.

6 **REPORT**

Open the Creative inventory using the Inventory control.

INPUT `Press E`

SUCCESS CUE The Creative inventory window is open and shows category tabs around an item grid.

7 **REPORT**

Locate the Creative inventory category named "Miscellaneous". Move the pointer over the category tabs until the hover tooltip reads "Miscellaneous"; do not use the Search Items tab because the test concerns ordering inside the Miscellaneous category.

INPUT

`Move the mouse pointer over Creative inventory tabs until the tooltip says "Miscellaneous"`

SUCCESS CUE The pointer is over a tab whose tooltip explicitly reads "Miscellaneous".

8

REPORT

TRIGGER

Open the Miscellaneous category by left-clicking the tab identified in the previous step. Allow the item grid to finish displaying before any inspection or scrolling begins.

INPUT Left-click the "Miscellaneous" tab

SUCCESS CUE The Miscellaneous tab is selected and its item grid is visible and responsive, ready to be examined from its current position through the full list.

HANDOFF TO OBSERVATION

The Minecraft 1.19 Creative inventory is open with the Miscellaneous tab selected and its item grid fully displayed. Hand control to the observation subsystem so it can traverse the tab and inspect the relative inventory ordering of the turtle egg and frogspawn entries without changing categories or using Search Items.

UNCERTAINTIES

- The report does not specify whether the original reproduction used single-player or multiplayer. A local single-player Creative world is selected as the simplest execution path because no server-specific condition is stated.
- The report does not specify a seed, coordinates, world type, difficulty, GUI scale, window size, or inventory scroll position; none is asserted as required.
- The report does not identify the Miscellaneous tab by its icon, so the plan uses the tab's hover tooltip rather than assuming a potentially version-sensitive icon.
- The report says to look through the Miscellaneous tab but does not prescribe a scrolling method. Scrolling and evaluating item placement are therefore left to the observation subsystem after handoff.
