

Sign text is non-functional

[MC-297339](#) DATAFIXER

Status	Resolved / Fixed
Affected	25w18a
Fixed in	25w19a
Reported	2025-04-29
Mojira category	Block states; Datafixer

REPRODUCTION TARGET

Use version: 25w18a

Affected versions (1):

25w18a

Environment:

Minecraft: Java Edition snapshot 25w18a in a single-player integrated-server world. Use a newly created Creative-mode test world for deterministic item access. No particular seed, coordinates, sign wood type, graphics setting, GPU, dedicated server, or multiplayer client is required by the report. The instructions assume the default keyboard-and-mouse controls and an English-language item search.

PRECONDITIONS

- The Minecraft Launcher must be able to start the exact affected snapshot, 25w18a. Enable historical snapshot versions in the launcher's installation/profile settings if 25w18a is not initially available.
- Use a disposable test world. The minimal procedure tests a newly placed sign, so no existing or upgraded world is required.
- Keep the game window focused so keyboard input is sent to Minecraft.
- Do not use the fixed version 25w19a for this reproduction.

STEPS TO REPRODUCE

1 INFERRED

Open the Minecraft Launcher and navigate to the installation/profile management screen. Enable snapshot versions if the version selector does not currently show historical snapshots.

SUCCESS CUE The launcher permits snapshot versions to be selected when creating or editing an installation.

2 REPORT

Create or edit an installation and select the exact game version named "snapshot 25w18a". Save the installation without substituting another snapshot or release.

INPUT 25w18a

SUCCESS CUE The saved launcher installation identifies 25w18a as its selected version.

3 REPORT

Start the 25w18a installation and wait for Minecraft to reach the title screen.

SUCCESS CUE The Minecraft title screen is responsive and displays 25w18a as the running version.

4 REPORT

From the title screen, select "Singleplayer", then select "Create New World" to open the world-creation screen.

SUCCESS CUE The world-creation screen is open.

5 INFERRED

Optionally name the test world "MC-297339 reproduction", set Game Mode to Creative, leave the seed unspecified, and select "Create New World".

INPUT MC-297339 reproduction

SUCCESS CUE World generation begins for a new Creative-mode world.

6 INFERRED

Wait until world generation and initial chunk loading finish. Do not continue while a loading screen is present or terrain is still failing to render.

SUCCESS CUE The player is in the world, nearby terrain is rendered, and movement responds normally.

7 INFERRED

Press the inventory action key, which is E by default, to open the Creative inventory.

INPUT E

SUCCESS CUE The Creative inventory interface is open and includes item-selection tabs and the player hotbar.

8 INFERRED

Open the Creative inventory's Search Items tab, focus its search field, and enter "oak sign". If the inventory is already on the searchable item tab, use its visible search field directly.

INPUT oak sign

SUCCESS CUE The filtered item results include the regular item named Oak Sign.

9 **INFERRED**

Move one Oak Sign stack from the search results into any empty hotbar slot. The hotbar is the row of nine quick-access slots at the bottom of the inventory.

SUCCESS CUE An Oak Sign is visible in one of the nine hotbar slots.

10 **INFERRED**

Close the inventory with E or Escape, then select the hotbar slot containing the Oak Sign by pressing its corresponding number key or scrolling the mouse wheel.

INPUT E, then the Oak Sign hotbar slot number

SUCCESS CUE The world view is visible and the Oak Sign is shown as the currently held item.

11 **REPORT**

Aim the crosshair at the top face of a nearby solid block, such as a grass or stone block with empty space above it. Press the Use Item/Place Block control, which is the right mouse button by default, once to place a regular standing oak sign.

INPUT Right mouse button

SUCCESS CUE A standing oak sign has been placed and the sign-editing interface is open with its confirmation button available. Keep this interface open.

12 **INFERRED** **TRIGGER**

Without closing the sign-editing interface or changing focus to another window, type the test string "TEST123" once. Do not select the confirmation button yet and do not press Escape.

INPUT TEST123

SUCCESS CUE The TEST123 keystrokes have been sent while the newly placed sign's editing interface remains open; no additional player or UI action has been taken.

HANDOFF TO OBSERVATION

The player has just entered the test keystrokes TEST123 into the active editing interface of a newly placed regular oak sign in 25w18a. The sign-editing interface remains open and no confirmation or cancellation action has been performed; begin observation in this state.

UNCERTAINTIES

- The report does not provide a formal numbered Steps to Reproduce section. This plan reconstructs the minimum new-sign procedure directly supported by the description.
- The report does not specify a required game mode. Creative mode is selected only as a deterministic way to obtain a sign without crafting or commands.
- The report states that all regular and hanging sign types are affected but does not require a particular wood type. A regular Oak Sign placed on the top of a solid block is used as the simplest deterministic representative.
- The report does not specify the text to enter. TEST123 is a practical test string chosen to provide unmistakable keyboard input.
- The description also reports a separate world-upgrade variant involving pre-existing signs placed before updating to 25w18a. That variant is not included because the same report explicitly states that newly placed signs reproduce the issue, allowing a shorter deterministic procedure.
- The report mentions both single-player and a third-party hosted server. This plan uses single-player because the report confirms that a dedicated or third-party server is not necessary for the new-sign reproduction.
