23w14a

1.20.1

23w32a

1.20.3 Release Candidate 1

Environment: Vanilla Minecraft: Java Edition 1.15.2 in a single-player Creative-mode world with commands enabled. Use the English (US) language, enable subtitles, and keep Master Volume above 0%. No polar bear entity is required because the supplied /playsound command directly invokes the relevant sound event.

PRECONDITIONS

- The Minecraft Launcher can install and start the exact Java Edition release 1.15.2.
- Use an unmodified client without mods or resource packs that replace sounds, subtitle text, or English language files.
- A keyboard or equivalent input is available for opening chat and submitting the command.
- The test world must permit the player to execute permission-level-2 commands; the procedure establishes this by enabling cheats.

STEPS TO REPRODUCE

1 **REPORT**

In the Minecraft Launcher, create or select a Java Edition installation that uses release 1.15.2, launch it, and wait for the title screen to finish loading.

INPUT 1.15.2

SUCCESS CUE The Minecraft title screen is responsive and identifies the running version as 1.15.2.

2 **INFERRED**

Set the client language to English (US). From the title screen, select Options..., select Language..., choose English (US), and select Done. Wait for any font or resource reload to finish.

INPUT English (US)

SUCCESS CUE The title-screen interface is displayed in English.

3 **INFERRED**

Create a command-enabled test world. Select Singleplayer, select Create New World, set Game Mode to Creative, open More World Options..., ensure Allow Cheats is ON, and then select Create New World. The world name, seed, and world type may remain at their defaults.

SUCCESS CUE The player enters a newly created world in Creative mode, and the HUD and terrain are visible.

4 **INFERRED**

Do not continue until world loading is complete. Wait for nearby terrain to render, then briefly move the player using the movement controls to confirm that the game responds normally.

SUCCESS CUE Nearby chunks are rendered and player movement responds without a loading pause.

5 **VERIFIED**

Enable the subtitle overlay. Press Esc, select Options..., select Music & Sounds..., and click Show Subtitles until its value is ON.

INPUT Show Subtitles: ON

SUCCESS CUE The Music & Sounds menu displays Show Subtitles: ON.

6 **INFERRED**

In the same Music & Sounds menu, ensure the Master Volume slider is set above 0%. A clearly audible value such as 100% may be used.

INPUT Master Volume: 100%

SUCCESS CUE The Master Volume setting is visibly greater than 0%.

7 **INFERRED**

Return to active gameplay by selecting Done to leave Music & Sounds, selecting Done to leave Options if necessary, and selecting Back to Game from the pause menu.

SUCCESS CUE The world view is active again and the player can move normally.

8 **INFERRED**

Open the in-game chat/command entry using the Open Chat control, whose default key is T. If controls have been rebound, use the key assigned to Open Chat.

INPUT **T**

SUCCESS CUE A chat input line is visible at the bottom of the screen and accepts keyboard input.

9 **REPORT**

Enter the report's command exactly as written, including the leading slash. Do not add coordinates, volume, pitch, or other optional arguments.

INPUT `/playsound minecraft:entity.polar_bear.ambient_baby master @a`

SUCCESS CUE The complete command is visible in the chat input line with the sound identifier, master source, and @a target unchanged.

10 **REPORT** **TRIGGER**

Press Enter once to execute the command. Do not repeat the command; hand control to the observation subsystem immediately after this single execution.

INPUT **Enter**

SUCCESS CUE The command closes the chat input without a red syntax or permission error, command feedback indicates successful sound playback, and the baby-polar-bear ambient sound event has just been emitted to the player.

HANDOFF TO OBSERVATION

The supplied /playsound command has just completed successfully once while English (US) and Show Subtitles: ON remain active. Begin observing the lower-right subtitle overlay immediately, without executing the command again.

UNCERTAINTIES

- The report does not specify a game mode, world seed, coordinates, or multiplayer requirement. A new single-player Creative world with cheats enabled is used as the minimum deterministic environment needed to run the supplied command.
- The report does not explicitly specify the client language. English (US) is selected because the reported issue concerns the wording of an English subtitle.
- The report does not specify audio levels or resource-pack state. Master Volume above 0% and unmodified vanilla resources are practical controls intended to ensure the supplied sound event is dispatched without customized subtitle text.
- The historical menu path and /playsound command structure were externally checked for Java Edition compatibility; the exact command itself remains unchanged from the report.
