

Clusters of dripstone (stalagmites) tend to generate abnormally frequent with thickness "tip" on tall caves

[MC-235567](#) WORLD GENERATION

Status	Resolved / Fixed
Affected	1.17.1; 21w37a; 21w38a; 21w39a; 21w40a; 21w42a; 21w43a; 21w44a; 1.18 Pre-release 1; 1.18 Pre-release 2; 1.18 Pre-release 4
Fixed in	1.18 Pre-release 5
Reported	2021-08-29
Mojira category	World generation

REPRODUCTION TARGET

Use version: 1.17.1

Affected versions (11):

1.17.1

21w37a

21w38a

21w39a

21w40a

21w42a

21w43a

21w44a

1.18 Pre-release 1

1.18 Pre-release 2

1.18 Pre-release 4

Environment:

Minecraft: Java Edition 1.17.1 in single-player, using a fresh Single Biome world configured as Dripstone Caves, with commands enabled and the player in Spectator mode. This plan uses the report's alternative surface reproduction route because it avoids the unguided search for a large noise cave.

PRECONDITIONS

- Install or make available the exact Minecraft: Java Edition version labeled "1.17.1" in the Minecraft Launcher.
- Use a vanilla client with no mods or third-party datapacks that alter biome features, cave generation, terrain generation, or pointed dripstone generation.
- Create a new world; do not reuse an existing world because the relevant terrain and dripstone features must be newly generated.
- The report supplies no world seed or coordinates, so leave the seed unspecified and expect the exact terrain layout to vary.
- Commands must be enabled so that the player can enter Spectator mode.

STEPS TO REPRODUCE

1 **REPORT**

Open the Minecraft Launcher, select an installation using exactly Java Edition 1.17.1, start the game, and wait for the main menu.

INPUT 1.17.1

SUCCESS CUE The Minecraft main menu is open and the displayed game version is 1.17.1.

2 **INFERRED**

Select "Singleplayer", then select "Create New World". Use a new world rather than opening or converting an existing save.

SUCCESS CUE The Create New World configuration screen is open.

3 **INFERRED**

Select "More World Options..." and set "Allow Cheats" to "ON". Leave the seed field empty because the report does not provide a seed.

INPUT Allow Cheats: ON

SUCCESS CUE The world-options screen shows that commands are allowed and no seed has been entered.

4 **VERIFIED**

Use the "World Type" button repeatedly until it displays "Single Biome", then select the adjacent "Customize" button.

INPUT World Type: Single Biome

SUCCESS CUE The biome-selection list for the Single Biome world type is open.

5 **REPORT**

Find and select the biome named "Dripstone Caves", then confirm the selection with "Done". Do not substitute another biome. If this biome is unavailable in the selected 1.17.1 installation, stop because the report does not identify the additional historical experimental setup that would be required.

INPUT Dripstone Caves

SUCCESS CUE The world-options screen is restored and the Single Biome customization is set to Dripstone Caves.

6 **REPORT**

Select "Create New World" to generate the fresh Dripstone Caves single-biome world.

SUCCESS CUE The player has spawned in the newly generated world.

7 **INFERRED**

Do not move immediately. Wait until the terrain around the spawn position has rendered, the loading overlay has disappeared, and looking or moving responds normally.

SUCCESS CUE Nearby terrain is visible without unrendered gaps and player controls respond normally.

8 VERIFIED

Press the chat key, which is T by default. Type the command exactly as shown, including the leading slash, and press Enter: /gamemode spectator

INPUT /gamemode spectator

SUCCESS CUE The game confirms the mode change; the normal hotbar is no longer shown, flight is active, and the player can pass through solid blocks.

9 REPORT

Reach the top surface of the Overworld. If the player is below or inside terrain, hold the upward flight control, Space by default, until the player passes through the terrain and reaches open sky. If already above ground, rise far enough to see the surrounding topmost terrain.

INPUT Space

SUCCESS CUE Open sky and the world's exposed top surface are visible, and the player is no longer enclosed by underground blocks.

10 INFERRED

Use the movement controls, W/A/S/D by default, to fly horizontally over previously unvisited surface terrain while keeping the ground in view. Continue until a broad area spanning multiple adjacent terrain sections has generated.

INPUT W/A/S/D

SUCCESS CUE A broad stretch of newly generated surface is visible around and ahead of the player.

11 INFERRED

Stop moving and wait until all visible surface terrain and naturally generated features have fully rendered. Do not continue while there are blank areas, temporary holes caused by loading, or delayed block updates.

SUCCESS CUE The visible surface has finished rendering and movement responds normally.

12 REPORT

While remaining in Spectator mode, locate an exposed surface area containing multiple naturally generated pointed-dripstone patches. Fly closer or descend with the sneak/descend control, Left Shift by default, only as needed to distinguish individual pointed-dripstone blocks. Do not place, break, or modify any blocks, and do not yet classify their thickness or height.

INPUT Left Shift

SUCCESS CUE Several naturally generated pointed-dripstone formations are visible clearly enough for their individual blocks to be inspected, while the surrounding terrain remains unmodified.

13 INFERRED TRIGGER

Face an adjacent, previously unvisited portion of the same surface and fly forward into rendering range while looking toward the ground. Stop as soon as that terrain and its pointed-dripstone features have finished generating and rendering.

INPUT W

SUCCESS CUE The newly entered surface section is fully rendered, the player is stationary in Spectator mode, and its naturally generated pointed-dripstone formations are in view.

HANDOFF TO OBSERVATION

A previously unvisited section of the Dripstone Caves single-biome surface has just generated and fully rendered, and the stationary Spectator-mode camera is looking at its naturally generated pointed-dripstone formations. Hand control to the observation subsystem before moving farther or modifying the terrain.

UNCERTAINTIES

- The report lists 1.17.1 first, so it is the required recommended version. However, the report was written during the experimental development of the 1.18 world-generation system and refers to large noise caves. The report does not identify which experimental snapshot, installation, or world-generation package was associated with its 1.17.1 entry. Preserve 1.17.1 as listed rather than silently replacing it with 21w37a.
- No seed or coordinates are provided. The exact positions and density of surface pointed-dripstone patches therefore depend on random world generation.
- The report does not define a quantitative minimum size for a "big/tall" cave or a precise distance for the claimed absence of nearby stalactites.
- This execution plan intentionally selects the report's alternative surface route. The primary route—searching underground in Spectator mode for a large noise cave—is less deterministic without a supplied seed or coordinates.
- If the selected 1.17.1 installation does not offer Dripstone Caves in the Single Biome selector or does not generate the terrain needed by the report, the missing historical experimental setup cannot be reconstructed confidently from the supplied report alone.
