

Entity models in the inventory can render outside the boundaries of the black box

[MC-85582](#) RENDERING

Status	Resolved / Fixed
Affected	Minecraft 1.8.8; Minecraft 15w41b; Minecraft 15w42a; Minecraft 15w43c; Minecraft 15w44a; Minecraft 15w44b; Minecraft 15w46a; Minecraft 15w47c; Minecraft 1.13.2; 1.19.2; 22w43a; 1.19.3; 23w06a; 1.19.4; 1.20 Pre-release 7; 1.20
Fixed in	23w31a
Reported	2015-08-08
Mojira category	Rendering

REPRODUCTION TARGET

Use version: Minecraft 1.8.8

Affected versions (16):

Minecraft 1.8.8

Minecraft 15w41b

Minecraft 15w42a

Minecraft 15w43c

Minecraft 15w44a

Minecraft 15w44b

Minecraft 15w46a

Minecraft 15w47c

Minecraft 1.13.2

1.19.2

22w43a

1.19.3

23w06a

1.19.4

1.20 Pre-release 7

1.20

Environment:

Minecraft Java Edition 1.8.8, preferably an unmodified single-player Creative-mode world with commands/cheats available, using a keyboard and mouse. The deterministic non-player entity variant described by the report is used because the report's elytra-based player variant cannot be performed in this first listed affected version.

PRECONDITIONS

- Launch the exact affected version Minecraft 1.8.8 rather than the fixed version 23w31a.
- Use a single-player world in Creative mode with commands available.
- Stand on open, solid terrain with at least several blocks of unobstructed space in front of the player so a horse can spawn and be approached.
- Keep the game window large enough that the complete horse inventory interface is visible.

STEPS TO REPRODUCE

1 REPORT

Launch the Minecraft Java Edition installation configured for Minecraft 1.8.8, then verify the title screen identifies the running version as 1.8.8.

SUCCESS CUE The Minecraft 1.8.8 title screen is displayed.

2 INFERRED

Create or load a single-player Creative-mode world in which commands are enabled. After entering the world, wait until nearby terrain has rendered and player movement responds normally.

SUCCESS CUE The player is standing in a responsive Creative-mode world and can execute commands.

3 INFERRED

Move to a flat, unobstructed location and face toward an empty area at least two blocks away.

INPUT W/A/S/D and mouse movement as needed

SUCCESS CUE There is solid, open ground approximately two blocks in front of the player with enough room for a horse.

4 INFERRED

Press T to open in-game chat.

INPUT T

SUCCESS CUE The chat input field is open and ready to accept a command.

5 VERIFIED

Enter the following legacy-version command exactly as written, including the leading slash, and press Enter: `/summon EntityHorse ~ ~ ~2 {Tame:1}`. This uses the historical EntityHorse identifier and Tame tag rather than modern horse command syntax. ([minecraft.wiki](https://minecraft.wiki/w/Talk%3AHorse/Archive_1?utm_source=openai))

INPUT `/summon EntityHorse ~ ~ ~2 {Tame:1}`

SUCCESS CUE A living horse is visible approximately two blocks in front of the player and no command-syntax error is shown.

6 INFERRED

Approach the summoned horse until it is within interaction range. If the selected hotbar slot contains an item, select an empty hotbar slot before interacting so the held item does not perform another action.

INPUT W, then a number key for an empty hotbar slot if needed

SUCCESS CUE The crosshair can be placed directly on the horse and the player's active hand is empty.

7 VERIFIED

Place the crosshair on the horse, hold the Sneak control—Left Shift by default—and right-click the horse once to open its inventory. If controls have been rebound, use the configured Sneak and Use/Interact controls instead. Horse inventory access while standing beside the horse uses sneak plus right-click. ([de.minecraft.wiki](https://de.minecraft.wiki/w/Inventar?utm_source=openai))

INPUT Hold Left Shift and right-click the horse once

SUCCESS CUE The horse inventory interface is open, with the horse model preview visible in its dark preview area and the player's inventory slots visible below.

8

REPORT

TRIGGER

Without clicking or closing the horse inventory, move the mouse cursor around the interface so the horse preview rotates through multiple orientations. Sweep the cursor near the left, right, upper, and lower edges and corners of the game window rather than leaving it stationary in the center.

INPUT Move the mouse cursor around the open horse inventory interface

SUCCESS CUE The horse inventory remains open and the horse preview has been rotated through several substantially different orientations; stop input and hand off immediately.

HANDOFF TO OBSERVATION

The horse inventory is still open in Minecraft 1.8.8, and the mouse has just been swept around the interface to rotate the horse model through multiple orientations. Begin visual observation of the inventory GUI without closing it or moving the cursor further.

UNCERTAINTIES

- The report's formal player-model steps require elytra, but elytra was introduced in Java Edition snapshot 15w41a and therefore is unavailable in the first listed affected version, Minecraft 1.8.8. The plan consequently uses the non-player horse-inventory variant explicitly identified in the report description. ([minecraft.wiki](https://minecraft.wiki/w/Minecraft_Wiki%3AProjects/Indonesian_translation/Alat?utm_source=openai))
- The horse summon command is a deterministic setup choice not supplied by the report. Its legacy EntityHorse identifier and Tame:1 syntax were externally verified for the relevant historical command format. ([minecraft.wiki](https://minecraft.wiki/w/Talk%3AHorse/Archive_1?utm_source=openai))
- The report does not specify a world seed, coordinates, GUI scale, window resolution, graphics setting, resource pack, exact horse orientation, or exact cursor coordinate. No unreported fixed value is imposed; the cursor is swept broadly to exercise the report's mouse-movement instruction.
- The affected-version list contains Minecraft 1.8.8 even though the formal elytra route cannot be used there. This plan preserves Minecraft 1.8.8 as recommended_version because it is the first affected version listed, as required.
