| Status          | Resolved / Fixed                                           |
| Affected        | 1.20.4; 1.20.5 Pre-Release 1; 1.20.5 Pre-Release 2; 24w19b |
| Fixed in        | 24w33a                                                     |
| Reported        | 2024-04-12                                                 |
| Mojira category | Rendering; Resource Packs; Textures and models             |

## REPRODUCTION TARGET

Use version:

1.20.4

Affected versions (4):

1.20.4

1.20.5 Pre-Release 1

1.20.5 Pre-Release 2

24w19b

Environment:

Minecraft: Java Edition 1.20.4 client, using the attached resource pack in the single-player world-creation interface. No world, server, game mode, seed, coordinates, commands, or operator permissions are required for the selected superflat-customization reproduction path.

## PRECONDITIONS

---

- Install or create a Minecraft Launcher installation for Minecraft: Java Edition 1.20.4, the first version listed as affected.
- Obtain the Mojira attachment named "empty-slot-translucency-1.20.5pre1-v1.0.zip".
- Keep the resource pack available as a ZIP file; do not manually edit its textures, metadata, or directory structure.
- Ensure the test resource pack will have priority over any other custom resource pack that changes GUI or empty-slot textures. The simplest arrangement is to disable all other non-default resource packs.

## STEPS TO REPRODUCE

### 1 REPORT

In the Minecraft Launcher, select the installation that uses Java Edition version 1.20.4 and start the game. Do not substitute the listed fix version 24w33a.

INPUT 1.20.4

SUCCESS CUE The Minecraft main menu has loaded, and the displayed version is 1.20.4.

### 2 INFERRED

From the main menu, select the Options button.

SUCCESS CUE The Options screen is open.

### 3 INFERRED

Select Resource Packs to open the resource-pack selection screen.

SUCCESS CUE The Resource Packs screen is visible, with available packs and selected packs shown in separate areas.

### 4 INFERRED

Select Open Pack Folder. Wait for the operating system's file manager to open the resourcepacks directory used by this 1.20.4 game installation.

SUCCESS CUE A file-manager window showing the active Minecraft resourcepacks directory is open.

### 5 REPORT

Copy the downloaded attachment ZIP into the open resourcepacks directory without changing its filename or contents. Return focus to Minecraft. If the pack does not appear automatically, leave and reopen the Resource Packs screen once to refresh it.

INPUT empty-slot-translucency-1.20.5pre1-v1.0.zip

SUCCESS CUE The pack from "empty-slot-translucency-1.20.5pre1-v1.0.zip" is displayed in the Available resource packs area.

### 6 REPORT

Activate the attached pack by hovering over or selecting its pack entry and clicking the right-pointing activation arrow, moving it from Available to Selected.

INPUT empty-slot-translucency-1.20.5pre1-v1.0.zip

SUCCESS CUE The attached pack is listed in the Selected resource packs area.

### 7 INFERRED

If Minecraft displays a warning that the resource pack was made for a different game version, confirm that you want to use the pack. If no warning appears, continue without making another selection.

SUCCESS CUE The warning, if presented, has been accepted and the test pack remains in the Selected area.

### 8 INFERRED

If other custom packs are selected, disable them or use the pack-order controls to place the attached test pack above any pack that could override GUI textures.

SUCCESS CUE The attached test pack is selected with no higher-priority custom pack capable of replacing its GUI or empty-slot textures.

**9** **INFERRED**

Select Done to apply the selected resource packs. Wait until resource reloading finishes; do not continue while the reload screen is displayed or the interface is unresponsive.

**SUCCESS CUE** Resource reloading has completed and the responsive Options screen is visible again.

**10** **INFERRED**

Select Done on the Options screen to return to the main menu.

**SUCCESS CUE** The main menu is visible and responds normally with the test resource pack active.

**11** **INFERRED**

Select Singleplayer.

**SUCCESS CUE** The Select World screen is open.

**12** **INFERRED**

Select Create New World. No existing world needs to be loaded or modified for this reproduction path.

**SUCCESS CUE** The Create New World configuration screen is open.

**13** **INFERRED**

Select the World tab in the Create New World screen.

**SUCCESS CUE** World-generation settings, including the World Type control, are visible.

**14** **REPORT**

Use the World Type control until its selected value is Superflat. Do not create the world.

**INPUT** Superflat

**SUCCESS CUE** The World Type control displays Superflat and the Customize button for superflat settings is available.

**15** **REPORT** **TRIGGER**

Select the Customize button for the Superflat world type and wait until the Superflat Customization screen has completely rendered.

**SUCCESS CUE** The Superflat Customization screen is fully visible, including its layer-list entries and their slot graphics, and the interface is responsive.

## HANDOFF TO OBSERVATION

---

The attached resource pack is active, and the Superflat Customization screen has just finished rendering with its layer-list slot graphics visible. Hand control to the observation subsystem before closing the screen or changing resource packs.

## UNCERTAINTIES

---

- The report provides several alternative viewing contexts: the Statistics item menu, the superflat customization menu, donkey/mule/llama inventory screens, and hovering over a bundle. This plan selects the superflat customization menu because it is explicitly supported by the report and requires no world creation, entity acquisition, inventory setup, or random exploration.
- The attachment filename identifies 1.20.5 Pre-Release 1 even though 1.20.4 is the first affected version and therefore the required recommended version. The report instructs use of the attached pack and lists 1.20.4 as affected; Minecraft may consequently display a resource-pack compatibility warning when the attachment is selected in 1.20.4.
- The report does not specify an operating system, launcher profile directory, UI language, GUI scale, graphics mode, seed, game mode, or server type. None is treated as a reproduction requirement for the selected menu-based path.

MANUAL RESULT

|                  |                    |
|------------------|--------------------|
| Version used     |                    |
| Reproduced?      | YES / NO / PARTIAL |
| Trigger reached? | YES / NO           |
| Crash file       |                    |
| Notes            |                    |
| Tested by / date |                    |
