REPRODUCTION TARGET

Use version: Minecraft 1.13

Affected versions (62):

- Minecraft 1.13
- Minecraft 18w30b
- Minecraft 18w31a
- Minecraft 1.13.1-pre1
- Minecraft 1.13.1
- Minecraft 1.13.2-pre1
- Minecraft 1.13.2-pre2
- Minecraft 1.13.2
- Minecraft 18w43a
- Minecraft 18w43b
- Minecraft 19w11b
- Minecraft 19w12b
- Minecraft 19w13b
- Minecraft 19w14a
- Minecraft 19w14b
- Minecraft 1.14 Pre-Release 1
- Minecraft 1.14 Pre-Release 2
- Minecraft 1.14 Pre-Release 3
- Minecraft 1.14 Pre-Release 4
- Minecraft 1.14 Pre-Release 5
- Minecraft 1.14
- Minecraft 1.14.1 Pre-Release 1
- Minecraft 1.14.1
- Minecraft 1.14.2 Pre-Release 1
- Minecraft 1.14.2 Pre-Release 2
- Minecraft 1.14.2 Pre-Release 3
- Minecraft 1.14.2 Pre-Release 4
- Minecraft 1.14.2
- Minecraft 1.14.3 Pre-Release 2
- Minecraft 1.14.3 Pre-Release 3
- Minecraft 1.14.3 Pre-Release 4
- Minecraft 1.14.3
- Minecraft 1.14.4 Pre-Release 1
- Minecraft 1.14.4 Pre-Release 2
- Minecraft 1.14.4 Pre-Release 3
- Minecraft 1.14.4 Pre-Release 4
- Minecraft 1.14.4 Pre-Release 5
- Minecraft 1.14.4 Pre-Release 6
- 1.14.4
- 19w39a
- 1.15.2
- 20w11a
- 20w15a
- 20w19a
- 20w22a
- 1.16.2
- 20w49a
- 1.16.5
- 21w06a
- 21w08b
- 1.18.1
- 1.19
- 1.19.2
- 1.19.3
- 1.19.4 Pre-release 4
- 1.19.4
- 1.20.1 Release Candidate 1
- 1.20.1
- 1.21.1
- 24w36a
- 1.21.4
- 25w03a

Environment: Minecraft: Java Edition using the integrated single-player world-selection interface. Run the exact first affected version, Minecraft 1.13. The report states that the problem is not exclusive to a particular operating system or hardware configuration. Use a pre-existing large local world save: the original reporter used the approximately 18 GB Białowieża Forest showcase map and also reproduced with a world of approximately 460 MB on an SSD.

PRECONDITIONS

- Install or create a launcher installation for the exact affected version Minecraft 1.13; do not use the listed fix version 26.1 Snapshot 6.
- Place a pre-existing large Java Edition world in the Minecraft saves directory so that it appears on the Singleplayer world list. Prefer the approximately 18 GB Białowieża Forest map used by the reporter if it is already available; otherwise use the largest compatible world available. The smallest reliably affected size is not established.
- Do not create a new empty world for this test, because the report states that reproduction depends on world size and that smaller worlds may not produce the condition.
- Ensure the storage device holding the Minecraft game directory has enough free space for an additional backup copy of the selected world. For the reporter's approximately 18 GB world, allow at least that much additional space plus a safety margin.
- Close the target world if it is currently loaded. The reproduction begins from the Minecraft title screen and uses the world-management UI rather than the in-world pause menu.
- Use the report's simpler normal-backup route, Edit World -> Make Backup. The alternative Optimize World route specifically requires a large 1.12 world and an additional conversion process, but is not necessary to trigger the backup operation described by the report.

STEPS TO REPRODUCE

1 INFERRED

In the Minecraft Launcher, select the installation configured for the exact version Minecraft 1.13 and start the game. Do not select a newer affected version or the fix version for this primary reproduction attempt.

INPUT **Play**

SUCCESS CUE The Minecraft 1.13 title screen is displayed and its menu buttons respond to input.

2 INFERRED

From the title screen, open the local single-player world list by moving the pointer over the Singleplayer button and pressing the default primary mouse button, left-click.

INPUT **Singleplayer**

SUCCESS CUE The Select World screen is displayed and the pre-existing large test world appears in the world list.

3 REPORT

Select the large test world by left-clicking its entry once. Use the approximately 18 GB Białowieża Forest showcase world if available; otherwise select the largest compatible existing world available, preferably at least approximately 460 MB. Do not double-click, because that would load the world instead of preparing it for editing.

SUCCESS CUE The intended large world's row is visibly highlighted on the Select World screen, and the Edit button is enabled.

4 REPORT

Open the selected world's management screen by left-clicking the Edit button. Do not click Play Selected World.

INPUT **Edit**

SUCCESS CUE The Edit World screen for the selected large world is displayed, including the Make Backup button.

5 INFERRED

Confirm that the screen belongs to the intended large world by checking the displayed world name. Do not rename, reset the icon, optimize, or otherwise modify the world during this route.

SUCCESS CUE The intended large world remains selected and the Make Backup button is ready to be activated.

6 REPORT TRIGGER

Initiate exactly one normal world backup by left-clicking the Make Backup button once. Do not repeatedly click, press Escape, close Minecraft, or start another operation after issuing this input.

INPUT **Make Backup**

SUCCESS CUE The Make Backup input has been issued for the selected large world and the backup-copy operation has just begun; immediately hand control to the observation subsystem without further interaction.

HANDOFF TO OBSERVATION

The Make Backup button has just been activated once for the selected large world in Minecraft 1.13. Leave the client untouched while the backup proceeds and begin observing client responsiveness and backup progression.

UNCERTAINTIES

- The report does not establish a universal minimum world size. The reporter initially used an approximately 18 GB world and later reproduced with a world of approximately 460 MB on an SSD, while also stating that smaller worlds were not affected. The threshold may therefore vary by machine and storage performance.
- The supplied report identifies the Białowieża Forest showcase map but does not include the map itself or a current download location. The executor must already have that map or another sufficiently large compatible world.
- The first affected version, Minecraft 1.13, is selected as required. The report's alternative Optimize World route would require opening a large 1.12 world in this version and selecting Backup and Load; this plan instead uses the simpler independently reported Edit World -> Make Backup route.
- The report's environment field was removed because the condition was not considered environmentally exclusive. No specific operating system, CPU, memory allocation, graphics mode, or storage type is required by the supplied evidence.
- A reported size of approximately 460 MB reproduced on the reporter's system but is not guaranteed to reproduce on faster hardware. If one backup completes too quickly for meaningful observation, repeat the plan with a larger existing world rather than repeatedly backing up the same small world.
