1.19.4

Environment: Minecraft: Java Edition Minecraft 1.14.2 in a single-player world using the integrated server. Use a Creative-mode world with cheats enabled as the simplest practical environment for executing the supplied summon command. Use keyboard and mouse controls; key names below assume the default bindings. The report specifies no seed, coordinates, resource pack, graphics preset, shader, or dedicated-server requirement.

PRECONDITIONS

- Install or configure a Minecraft: Java Edition installation/profile for Minecraft 1.14.2, the first version listed as affected.
- Do not use 23w14a for this reproduction because the report lists it as the fix version rather than an affected version.
- Create or load a single-player world in Creative mode with commands/cheats enabled. Creative mode is an execution convenience; the report does not specify a required game mode.
- Wait until the surrounding terrain has rendered and movement, camera rotation, and chat input respond normally.
- Move to a well-lit, open area with enough unobstructed space to stand near and view a horse from the front and sides.
- If controls are rebound, use the bindings for Open Chat, Change Perspective, Use Item/Place Block, and Sneak/Dismount in place of the default T, F5, right-click, and Left Shift inputs.

STEPS TO REPRODUCE

1 REPORT

Launch the installation/profile configured for Minecraft: Java Edition Minecraft 1.14.2, then enter the prepared single-player world.

INPUT `Minecraft 1.14.2`

SUCCESS CUE The world is open in Minecraft 1.14.2 and the player can move and rotate the camera normally.

2 INFERRED

Wait at the open test location until nearby chunks and entity rendering have finished loading. Do not begin while the terrain is visibly appearing or input is delayed.

SUCCESS CUE Nearby terrain is fully rendered, the frame updates normally, and movement responds without loading pauses.

3 INFERRED

Set the camera to first-person perspective so later F5 perspective changes are deterministic. Press the Change Perspective key repeatedly, if necessary, until the player's own body is not shown in front of the camera.

INPUT `F5 until first-person perspective is active`

SUCCESS CUE The crosshair is centered on the world and the player's full character model is not visible in front of the camera.

4 INFERRED

Press the Open Chat key to open the in-game chat and command input. The command must be run by the player in chat, with the leading slash included.

INPUT `T`

SUCCESS CUE The chat input field is open and ready to accept text.

5 REPORT

Enter the report's summon command exactly as supplied, including capitalization, quotation marks, braces, commas, namespace identifiers, count values, and the leading slash. Press Enter once to execute it.

INPUT

```
/summon minecraft:horse ~ ~ ~ {Tame:1b,ArmorItem:{id:"minecraft:diamond_horse_armor",Count:1b},SaddleItem:{id:"minecraft:saddle",Count:1b}}
```

SUCCESS CUE The command is accepted without a syntax or permission error, and a horse appears at or immediately beside the player's position wearing diamond horse armor and a saddle.

6 INFERRED

Select an empty hotbar slot so the player is not holding an item that could perform a different interaction. The hotbar is the row of nine slots along the bottom of the gameplay screen; press the number key corresponding to an empty slot.

INPUT `Press a number key from 1 through 9 corresponding to an empty hotbar slot`

SUCCESS CUE No held item is visible in the player's hand.

7 **INFERRED**

Move a short distance away if the horse spawned intersecting the player, then approach it until the crosshair can be placed on the center of its torso. Release all movement keys before interacting.

INPUT Use W/A/S/D as needed; center the crosshair on the horse's torso

SUCCESS CUE The horse is fully visible at close interaction distance, is not obstructed by blocks, and the crosshair rests on its torso.

8 **REPORT** **TRIGGER**

Use the horse once to mount it. With default controls, right-click the horse while the crosshair is on its torso. Do not open the horse inventory or remove its saddle or armor.

INPUT Right-click once

SUCCESS CUE The viewpoint rises into the riding position and the riding HUD, such as the horse health and jump indicators, confirms that the player is mounted on the horse.

9 **INFERRED**

Release all movement controls and allow the mounted horse and camera to become stationary before changing perspective.

INPUT Release W, A, S, D, Space, and sprint controls

SUCCESS CUE The mounted horse is not being deliberately moved or made to jump, and the camera is stable enough for close visual inspection.

10 **INFERRED**

Switch from first-person to rear third-person perspective so the mounted player, horse, saddle, armor, and reins can be viewed externally.

INPUT F5 once

SUCCESS CUE The camera is behind the mounted player and the horse's equipped body and head are visible in the same frame.

11 **REPORT**

Use the mouse to angle the third-person camera toward the horse's head and upper neck. Frame the reins closely enough that the strips extending between the horse's bridle area and the rider can be inspected. Keep the horse stationary and hold the view until the camera has rendered several stable frames.

INPUT Move the mouse to frame the horse's reins; do not press movement keys

SUCCESS CUE The reins and their connection near the horse's head and neck are visible and unobstructed in a stable mounted view.

12 **REPORT**

Press the Change Perspective key once more to enter front-facing third-person perspective. Angle the camera slightly downward as needed and frame at least one side of the horse's neck directly below the reins. Hold the resulting viewpoint for several stable rendered frames.

INPUT F5 once, then move the mouse to frame one side of the neck below the reins

SUCCESS CUE The camera faces the mounted player and horse, with the armor and the neck surface immediately below at least one rein visible without block obstruction.

13 **REPORT**

Dismount the horse while it still has the summoned saddle and diamond horse armor equipped. With default controls, press the Sneak/Dismount key once; do not attack the horse or open its inventory.

INPUT Left Shift once

SUCCESS CUE The player is standing independently beside the horse, while the same horse remains nearby with its saddle and diamond horse armor equipped.

14 **INFERRED**

Return to first-person perspective. Because the previous view was front-facing third-person, press F5 once under the default perspective cycle. If the perspective cycle differs, continue only until the player's full model is no longer visible in front of the camera.

INPUT F5 once, or until first-person perspective is active

SUCCESS CUE The camera is in first-person perspective and the dismounted horse remains nearby.

15 **REPORT**

Move approximately one to three blocks from the horse, turn toward its head, and center the view on the bridle around its face and muzzle. Adjust the angle only enough to keep the bridle, adjacent armor, and both sides of the head unobstructed; then stop moving and hold the view for several stable rendered frames.

INPUT Use W/A/S/D and the mouse as needed; center the crosshair near the horse's bridle

SUCCESS CUE The player is dismounted and stationary at close viewing distance, with the equipped horse's head and bridle centered and clearly visible.

HANDOFF TO OBSERVATION

The horse has just been mounted in step 8 with its summoned saddle and diamond horse armor still equipped. Begin continuous visual observation at this mounted state, retain observation while the executor frames the reins and neck in steps 10 through 12, and continue through the dismount and final bridle framing in steps 13 through 15. The final state is a stationary first-person close view of the dismounted horse's head and bridle.

UNCERTAINTIES

- The report does not specify a required game mode, world seed, coordinates, world type, graphics setting, resource pack, camera perspective, or lighting condition. Creative mode, a fresh open area, and third-person mounted views are practical execution choices rather than report-stated requirements.
- The report contains multiple visual inspection transitions: mounting the horse for the reins, framing the neck below the reins, and dismounting for the bridle. Because the output permits only one `trigger_step`, step 8 is selected as the earliest trigger and observation should continue through the later viewpoints and dismount.
- The exact camera distance and viewing angle are not specified. The plan uses stable, unobstructed third-person mounted views and a close first-person dismounted view to operationalize 'look closely' without changing the horse or supplied command.
- The summon command is preserved verbatim from the report and was not modified or independently web-verified.
