21w14a

21w17a

Environment:

Minecraft Java Edition. Execute the report's exact wither-rose reproduction in affected release 1.16.5 using an unmodified vanilla client and a single-player world (integrated server). Use Creative mode with cheats for setup, then Survival mode for the trigger. Use Normal difficulty and default keyboard/mouse controls or their rebound equivalents. The recommended_version field remains the first listed affected version as required, but the supplied modern reproduction is not executable unchanged in Minecraft 1.6.1.

PRECONDITIONS

- Create a new disposable world rather than opening an important existing world.
- Do not install mods, including Physics Mod, because the report's reproduction concerns vanilla client/server state.
- Commands must be permitted. In single-player, create the world with Allow Cheats set to ON.
- Begin in Creative mode so the wither rose can be placed safely before changing to Survival mode.
- Use a new player with no armor, no active status effects, and an otherwise empty inventory and hotbar.
- Keep at least two adjacent hotbar slots available: slot 1 for the attribute-modified dirt and slot 2 left empty for deselecting it.
- Use a patch of solid grass or dirt with enough open space to approach a single placed wither rose without contacting other hazards.
- Do not use the fixed version 1.17 Pre-release 1 or any later version for this reproduction.

STEPS TO REPRODUCE

1 INFERRED

In the Minecraft Launcher, create or select an installation for Java Edition 1.16.5, launch it, and wait for the title screen. Do not use a modded launcher profile.

INPUT 1.16.5

SUCCESS CUE The title screen identifies the running game as Minecraft Java Edition 1.16.5.

2 INFERRED

Select Singleplayer, choose Create New World, set Game Mode to Creative, open More World Options and set Allow Cheats to ON, then create the world. The seed and world type may remain at their defaults.

SUCCESS CUE A new world opens with the player in Creative mode and able to fly.

3 INFERRED

Wait before continuing until nearby terrain has rendered, the player can move normally, and opening chat or inventory responds without initial world-loading delay.

SUCCESS CUE Nearby blocks are fully rendered and player controls respond normally.

4 INFERRED

Press T to open in-game chat, enter the difficulty command exactly as shown including the leading slash, and press Enter.

INPUT /difficulty normal

SUCCESS CUE Chat reports that the difficulty has been set to Normal.

5 INFERRED

Press E to open the Creative inventory. Open the Search Items tab, click the search field, type "wither rose", and place one Wither Rose into hotbar slot 9, which is the rightmost slot in the nine-slot bar at the bottom of the screen. Close the inventory with E.

INPUT wither rose

SUCCESS CUE A Wither Rose item is visible in hotbar slot 9 and the inventory screen is closed.

6 REPORT

Select hotbar slot 9 by pressing 9. Aim at the top face of a grass block or dirt block in the open test area and use the Place Block action, default right-click, once to place the wither rose.

INPUT 9, then right-click

SUCCESS CUE Exactly one planted wither rose is standing on the selected grass or dirt block.

7 INFERRED

Move at least two horizontal blocks away from the planted wither rose. Face the rose and line up a straight, unobstructed walking path to it, but do not touch it yet.

INPUT W/A/S/D as needed

SUCCESS CUE The rose remains visible ahead, the player is not occupying its block, and no status-effect icon is present.

8 REPORT

Press T, enter the game-mode command exactly as shown including the leading slash, and press Enter.

INPUT `/gamemode survival`

SUCCESS CUE The Survival health and hunger bars are visible, and the player can no longer fly indefinitely.

9 REPORT

While still standing away from the rose, press T, enter the report's item command exactly as shown including the leading slash and all NBT punctuation, and press Enter. Execute it in in-game chat, not a server console.

INPUT

```
/give @p dirt{AttributeModifiers:[{AttributeName:"generic.max_health",Name:"generic.max_health",Amount:20d,Operation:0,UUID:[I;0,1,2,3],Slot:"mainhand"}]}
```

SUCCESS CUE Chat reports that dirt was given to the nearest player, and a dirt item is present in the player's inventory.

10 INFERRED

Press E to open the Survival inventory. Move the newly given dirt item into hotbar slot 1, the leftmost hotbar slot. Remove any item from hotbar slot 2 so that slot 2 is empty. Leave the wither rose item in slot 9 or elsewhere; it must not occupy slot 2. Close the inventory with E.

SUCCESS CUE The modified dirt is in hotbar slot 1, hotbar slot 2 is empty, and the inventory screen is closed.

11 REPORT

Press 1 to make hotbar slot 1 active and hold the attribute-modified dirt in the player's main hand. Do not place or drop the dirt.

INPUT `1`

SUCCESS CUE Hotbar slot 1 is highlighted, dirt is visible in the player's main hand, and the health capacity has expanded to 40 health points, displayed as 20 heart icons.

12 REPORT

With the dirt still selected, press T, enter the report's healing command exactly as shown including the leading slash, and press Enter.

INPUT `/effect give @p minecraft:instant_health 1 3`

SUCCESS CUE The command succeeds and all heart icons in the expanded 40-point health bar are filled.

13 INFERRED

Wait only until the Instant Health command has finished applying and normal movement input responds. Keep the dirt selected, remain away from the wither rose, and do not take any damage during this wait.

SUCCESS CUE The player remains stationary away from the rose with the modified dirt still selected and the expanded health bar filled.

14 REPORT

Press 2 to switch the active hotbar selection from the modified dirt in slot 1 to the empty slot 2. Do not select the dirt again, open the inventory, heal again, or take any other damage before entering the rose.

INPUT `2`

SUCCESS CUE Hotbar slot 2 is highlighted, the player's main hand is empty, and the dirt remains stored in slot 1 but is not active.

15 **REPORT** **TRIGGER**

Immediately walk straight into the planted wither rose using the Forward action, default W. Stop moving when the player's feet occupy the same block space as the rose, and remain in contact long enough for the rose's Wither effect to apply. Do not jump, select the dirt, or leave the rose block before the first health update.

INPUT Hold W until occupying the wither rose, then release W

SUCCESS CUE The player's feet overlap the planted wither rose while empty hotbar slot 2 remains active; the observation subsystem must now monitor the resulting health and UI updates.

16 **REPORT**

While observation remains active, if the Death Screen interface becomes available, wait only until its controls are interactable and then left-click the Respawn button exactly once. Do not press Escape, disconnect, issue a command, or click Title Screen first. If no Death Screen appears, do not fabricate this action; leave the state unchanged for the observation subsystem.

INPUT Left-click "Respawn" once, if presented

SUCCESS CUE If the button was presented, exactly one Respawn click has been sent and any immediate UI transition can be observed; otherwise no additional input has altered the triggered state.

HANDOFF TO OBSERVATION

The player has just entered and remained inside the planted wither rose while the max-health dirt is deselected and empty hotbar slot 2 is active. Begin observation immediately at this state and keep observation active through the conditional Respawn click described in step 16.

UNCERTAINTIES

- The required recommended_version is the first affected entry, Minecraft 1.6.1, but the report's rewritten primary reproduction uses a wither rose, which was not added to Java Edition until snapshot 18w43a for the 1.14 development cycle. Therefore, the exact supplied path cannot be executed unchanged in Minecraft 1.6.1. ([minecraft.net](https://www.minecraft.net/en-us/article/minecraft-snapshot-18w43a?utm_source=openai))
- The supplied item command uses the snake_case attribute name generic.max_health and an int-array UUID. Attribute names were changed to forms including generic.max_health during the 1.16 development cycle, while pre-1.16 attribute modifiers used UUIDMost and UUIDLeast rather than the int-array UUID form. This is why the plan departs from the first affected version and uses affected release 1.16.5 for the exact primary steps. ([zh.minecraft.wiki](https://zh.minecraft.wiki/w/Java%E7%89%881.16/%E5%BC%80%E5%8F%91%E7%89%88%E6%9C%AC?variant=zh-tw&utm_source=openai))
- The report does not explicitly name which affected version its rewritten wither-rose command sequence targets. Version 1.16.5 is selected as a stable affected release compatible with the report's modern block, command, attribute-name, and UUID era.
- No world seed, coordinates, dedicated-server requirement, multiplayer requirement, or special graphics setting is supplied by the report.
- Step 16 is necessarily conditional because the Respawn control is only available if the preceding trigger produces the interface described by the report. Whether that interface appears is for the observation subsystem to evaluate, not for this plan to assume.
