Environment: Minecraft: Java Edition Minecraft 1.7.10 in an unmodified singleplayer world using keyboard and mouse. Use Creative mode with commands enabled only to obtain the setup items, then change the player to Survival mode before placing and targeting the item frame.

PRECONDITIONS

- A Minecraft: Java Edition launcher installation capable of starting the exact profile Minecraft 1.7.10 is available.
- Use a singleplayer world; the report does not require a dedicated server, multiple players, a particular seed, or particular coordinates.
- Commands must be enabled so the setup can change the player from Creative mode to Survival mode.
- The Pick Block control must be bound to an available input. Its default keyboard-and-mouse binding is the middle mouse button, shown as Button 3 in controls.
- The player must have at least two item frames before entering Survival mode so that one can be placed while another remains in the inventory.
- A non-item-frame item must remain available for selection after the item frame is placed.

STEPS TO REPRODUCE

1 REPORT

In the Minecraft Launcher, create or select an installation that uses the exact version Minecraft 1.7.10, start the game, and wait for the main menu to appear. Do not use a later fix version for this reproduction.

SUCCESS CUE The Minecraft main menu is visible and the displayed game version is 1.7.10.

2 VERIFIED

From the main menu, open Options, then Controls. Locate the action named Pick Block. Leave it bound to Button 3, the default middle mouse button, or record the alternate bound input if the controls were previously changed. Return to the main menu after checking the binding.

INPUT Button 3 / middle mouse button

SUCCESS CUE The executor knows which physical input activates Pick Block; by default, it is the middle mouse button.

3 INFERRED

Select Singleplayer, then select Create New World to open the world-creation screen.

SUCCESS CUE The Create New World screen is open.

4 INFERRED

Click the Game Mode button until it displays Game Mode: Creative. Creative mode is used only to obtain deterministic setup items without crafting or exploration.

SUCCESS CUE The world-creation screen displays Game Mode: Creative.

5 INFERRED

Open More World Options, ensure Allow Cheats is set to ON, return to the main world-creation screen if necessary, and select Create New World.

SUCCESS CUE World generation begins with Creative mode and commands enabled.

6 INFERRED

Wait for the world to finish loading. Do not continue until nearby terrain is rendered and movement and inventory input respond normally.

SUCCESS CUE The player can move normally in the loaded world and is currently in Creative mode.

7 INFERRED

Press E to open the Creative inventory. Identify the hotbar as the row of nine slots at the bottom of the screen; hotbar slot 1 is the leftmost slot and slot 2 is immediately to its right.

INPUT E

SUCCESS CUE The Creative inventory is open and the nine hotbar slots are visible.

8 INFERRED

Open the Search Items tab, click its search field, and search for Item Frame. Move a stack containing at least two item frames into hotbar slot 1. A larger Creative stack is acceptable, but at least two must be present so one remains after one is placed.

INPUT item frame

SUCCESS CUE Hotbar slot 1 contains at least two item frames.

9 **INFERRED**

Clear or replace the search text, search for Stone, and move a stack containing at least two stone blocks into hotbar slot 2. One stone will provide a support surface, and at least one remaining stone will be the non-item-frame item held during the trigger.

INPUT **stone**

SUCCESS CUE Hotbar slot 1 contains item frames and hotbar slot 2 contains at least two stone blocks.

10 **INFERRED**

Press E or Escape to close the inventory and return to first-person world view.

INPUT **E or Escape**

SUCCESS CUE The inventory is closed and the hotbar is visible at the bottom of the screen.

11 **INFERRED**

Press 2 to select hotbar slot 2 containing stone. The active hotbar slot is the slot surrounded by the selection outline.

INPUT **2**

SUCCESS CUE Stone is visible in the player's hand and hotbar slot 2 has the active-slot outline.

12 **INFERRED**

Aim at an open top surface of the ground and press the Use Item/Place Block control once, which is right-click by default, to place one stone block. Choose a position with at least one unobstructed vertical side at player eye level or below.

INPUT **Right-click**

SUCCESS CUE A stone block has been placed with an exposed vertical side, and at least one stone remains in hotbar slot 2.

13 **INFERRED**

Press T to open in-game chat. Type the exact historical command `/gamemode 0`, including the leading slash, and press Enter. If the command is rejected because commands are unavailable, stop and recreate or reopen the world with commands enabled before continuing.

INPUT **/gamemode 0**

SUCCESS CUE The command completes and the Survival HUD, including health and hunger indicators, is visible.

14 **REPORT**

Press 1 to select hotbar slot 1 containing the item frames.

INPUT **1**

SUCCESS CUE An item frame is visible in the player's hand and hotbar slot 1 has the active-slot outline.

15 **REPORT**

Center the crosshair on an exposed vertical side of the placed stone block and press the Use Item control once, which is right-click by default, to place exactly one empty item frame. Do not place an item inside the frame.

INPUT Right-click

SUCCESS CUE One empty item frame is attached to the vertical face of the stone block, and at least one item frame remains elsewhere in the player's inventory or hotbar.

16 **REPORT**

Press 2 to switch the active hotbar selection from the item frames to the remaining stone. Confirm that the player is holding stone, not an item frame.

INPUT 2

SUCCESS CUE Hotbar slot 2 is active, stone is visible in the player's hand, and at least one item frame is still present in hotbar slot 1.

17 **REPORT**

Stand close enough to interact with the placed item frame, approximately two to four blocks away, and move the view until the crosshair is directly over the empty item frame rather than the supporting stone block or surrounding air. Keep the stone selected.

SUCCESS CUE The crosshair is centered on the item frame entity while Survival mode remains active and stone remains selected.

18 **VERIFIED** **TRIGGER**

Activate Pick Block exactly once while continuing to look directly at the item frame. With default controls, press the middle mouse button once; if Pick Block was rebound in step 2, press that configured input instead. Do not manually select another hotbar slot after sending the input.

INPUT Middle mouse button / configured Pick Block input

SUCCESS CUE One Pick Block input has just been sent while the crosshair targeted the item frame entity; no further inventory or hotbar input has been made.

HANDOFF TO OBSERVATION

The player is in Survival mode, an empty item frame is attached to the stone support, at least one item frame remains in hotbar slot 1, stone was selected in hotbar slot 2, and Pick Block has just been activated once while the crosshair targeted the item frame. Hand off immediately without changing the selected slot or pressing Pick Block again.

UNCERTAINTIES

- The report covers both Survival and Adventure mode, but its concrete reproduction instructions explicitly use Survival mode. This plan therefore uses Survival as the simplest deterministic variant; Adventure can be tested separately if broader mode coverage is required.
- The report does not prescribe a seed, coordinates, multiplayer environment, or dedicated server configuration. A default singleplayer world is used as a practical execution choice.
- The report does not specify how the item frames should be obtained. Creative inventory is used to avoid crafting and exploration while preserving the required order: obtain the frames, change to Survival, and then place one.
- The report asks for two item frames. The Creative inventory may provide a larger stack; this plan treats at least two as sufficient because the reproduction-relevant state is one placed item frame plus at least one matching item frame remaining in inventory.
- The report lists 24w44a in both Affects versions and Fix versions. It has been retained in `affected_versions` because every supplied affected-version entry must be copied exactly, but it is not selected as the recommended reproduction version.
- The historical command `/gamemode 0` is used for Minecraft 1.7.10 rather than modernizing the procedure to a newer command or game-mode-switching UI.
- External verification was limited to operational control and item-frame placement details from permitted Minecraft Wiki sources; the supplied Mojira report remains the primary source of reproduction requirements.
