1.17

1.19.3

23w03a

23w04a

23w05a

23w06a

1.20.4

Environment:

Minecraft Java Edition, exact client version Minecraft 1.4.2, local singleplayer, and two distinct authenticated player profiles with different usernames. Both profiles must launch the game using the same game directory and therefore the same saves folder. Use a fresh Creative-mode world for this minimal two-player-profile reproduction; LAN and a dedicated server are not required for the selected variant.

PRECONDITIONS

- Two distinct Minecraft Java Edition player profiles are available; designate them Player 1 and Player 2.
- Player 1 and Player 2 have different usernames. Do not use the same profile under two labels.
- Both profiles can launch the exact affected version Minecraft 1.4.2.
- Both profiles use the same Minecraft game directory, so a world created by Player 1 remains visible in the Singleplayer world list after switching to Player 2.
- Player 2 has never opened the new test world before the trigger step.
- Do not use the workaround from the report: do not delete or edit the Data > Player entry in level.dat.
- Close the game completely before changing from Player 1 to Player 2; do not leave the world open to LAN or run both clients simultaneously for this variant.

STEPS TO REPRODUCE

1 INFERRED

Configure or select a launcher installation that starts the exact affected Java Edition version Minecraft 1.4.2. Ensure its game directory will be reused when launching both player profiles.

INPUT `Minecraft 1.4.2`

SUCCESS CUE The selected installation identifies its game version as Minecraft 1.4.2 and points to the shared game directory that will contain the test world.

2 REPORT

Sign in as Player 1 and launch Minecraft 1.4.2. Wait for the main menu to become responsive.

SUCCESS CUE Minecraft 1.4.2 is at the main menu under Player 1's distinct account identity.

3 INFERRED

Open the local world menu by clicking Singleplayer, then click Create New World.

INPUT `Singleplayer -> Create New World`

SUCCESS CUE The Create New World screen is open.

4 INFERRED

Enter the world name MC-697-Repro. Click the Game Mode button until it displays Creative, then click Create New World. Do not configure a special seed; the bug does not depend on terrain generation.

INPUT `World Name: MC-697-Repro; Game Mode: Creative`

SUCCESS CUE The world named MC-697-Repro begins loading in Creative mode.

5 INFERRED

Wait for world creation and terrain loading to finish. Do not continue while the loading screen is visible or while nearby terrain is still failing to render.

SUCCESS CUE Player 1 can see rendered terrain, look around, and move normally in the newly created world.

6 INFERRED

Press E, using the default Inventory control, to open Player 1's Creative inventory.

INPUT `E`

SUCCESS CUE The Creative inventory item grid and the player's hotbar slots are visible.

7 INFERRED

Locate the Block of Diamond in the Creative inventory and place a stack into hotbar slot 1. Locate the Block of Gold and place a stack into hotbar slot 2. Use left-click to pick up each item stack and left-click the intended hotbar slot to place it. These items are a distinctive Player 1 inventory marker; no crafting is required.

INPUT `Block of Diamond -> hotbar slot 1; Block of Gold -> hotbar slot 2`

SUCCESS CUE Hotbar slot 1 contains Block of Diamond items and hotbar slot 2 contains Block of Gold items.

8 **INFERRED**

Press E to close the inventory. Press the number key 1 to make hotbar slot 1 the active slot.

INPUT E, then 1

SUCCESS CUE The inventory is closed, hotbar slot 1 is highlighted, and Player 1 visibly holds a Block of Diamond.

9 **INFERRED**

Leave Player 1 in the world briefly without dropping or placing the two inventory marker stacks. This establishes a nonempty, readily identifiable player state for the world save.

SUCCESS CUE Player 1 remains in the loaded world with Block of Diamond in slot 1, Block of Gold in slot 2, and slot 1 selected.

10 **REPORT**

Press Esc to open the pause menu, then click Save and Quit to Title. Wait until the main menu is fully displayed. This saves Player 1's current state as the world's singleplayer/default player data.

INPUT Esc -> Save and Quit to Title

SUCCESS CUE The main menu is displayed and MC-697-Repro is no longer open.

11 **INFERRED**

Exit Minecraft completely rather than only returning to the main menu. Wait until the game process has closed.

INPUT Quit Game

SUCCESS CUE No Minecraft 1.4.2 game window remains open and the launcher can change accounts safely.

12 **REPORT**

In the launcher, sign out of Player 1 or change the active account, then sign in as the distinct Player 2 profile. Do not move, copy, convert, or edit the MC-697-Repro world.

SUCCESS CUE The launcher is authenticated as Player 2, whose username differs from Player 1's username.

13 **INFERRED**

Using the same installation and shared game directory from step 1, launch Minecraft 1.4.2 as Player 2. Wait for the main menu to become responsive.

INPUT Minecraft 1.4.2

SUCCESS CUE Minecraft 1.4.2 is at the main menu under Player 2's account identity.

14 **REPORT**

Click Singleplayer and locate the existing world named MC-697-Repro. Do not create a second world and do not use Open to LAN.

INPUT Singleplayer

SUCCESS CUE MC-697-Repro appears in Player 2's Singleplayer world list, confirming that both profiles are accessing the same saved world folder.

15 **REPORT** **TRIGGER**

Select MC-697-Repro and click Play Selected World, or double-click the world entry once. This world-opening action is the reproduction trigger.

INPUT MC-697-Repro -> Play Selected World

SUCCESS CUE The world loading screen appears for the existing MC-697-Repro world under Player 2's profile.

16 **INFERRED**

Wait until the world has finished loading. Do not open the inventory, change hotbar selection, move items, issue commands, or save and quit before handing control to the observation subsystem.

SUCCESS CUE Player 2 is in the loaded MC-697-Repro world, surrounding terrain is rendered, and normal camera or movement input responds; Player 2's inventory and position have not yet been altered after loading.

HANDOFF TO OBSERVATION

Player 2 has just opened the existing MC-697-Repro singleplayer world originally created and saved by Player 1. Terrain loading has completed, input is responsive, and Player 2 has not yet moved items, changed the selected hotbar slot, opened a container, or saved the world. Begin observing the loaded player state now.

UNCERTAINTIES

- The report does not provide a formal numbered Steps to Reproduce section. This plan reconstructs the minimum same-computer, two-account path from the description and supporting comments.
- The report describes three related situations: a different player opening another player's world, an existing LAN participant playerdata entry being ignored, and default data becoming outdated after dedicated-server play. This plan intentionally selects only the simplest first situation; it does not establish the LAN or dedicated-server variants.
- No game mode, seed, world name, inventory contents, or location is prescribed by the report. A fresh Creative world and distinctive diamond/gold block inventory markers are practical execution choices, not asserted bug requirements.
- The exact arrangement of the Minecraft 1.4.2 Creative inventory depends on the historical UI and selected language. If the named blocks are not immediately visible, locate them by their item names or icons without substituting items unavailable in Minecraft 1.4.2.
- The plan assumes the launcher permits both profiles to use one shared game directory. If account-specific installations use different game directories, the same unmodified MC-697-Repro world folder must be made accessible to Player 2 before step 14 without opening or converting it in another version.
