1.21

Environment:

Minecraft Java Edition 1.15.2, using keyboard and mouse in a new single-player Creative-mode world. The Creative inventory GUI must remain open during the trigger. The report does not require a particular seed, coordinates, commands, dedicated server, or additional players.

PRECONDITIONS

- Configure the Minecraft Launcher to start exactly Java Edition 1.15.2, the first version listed as affected. Do not use fix version 24w33a for this reproduction.
- Ensure the Inventory control is bound to E and the Drop Selected Item control is bound to Q, matching the report's inputs. If controls have been rebound, restore these bindings before beginning.
- Use the single-item trigger variant selected for this plan: press Q without Ctrl while hovering over a hotbar stack containing exactly one item.
- A new Creative world is used as a practical way to begin with an empty hotbar; no particular world seed or world type is required.

STEPS TO REPRODUCE

1 **REPORT**

In the Minecraft Launcher, select the Java Edition installation or profile for version 1.15.2 and start the game.

INPUT `Select 1.15.2, then click Play`

SUCCESS CUE The Minecraft Java Edition main menu is displayed and identifies the running version as 1.15.2.

2 **INFERRED**

From the main menu, open the single-player world list.

INPUT `Click Singleplayer`

SUCCESS CUE The Select World screen is open.

3 **INFERRED**

Begin creating a fresh world so the test starts with an empty inventory and hotbar.

INPUT `Click Create New World`

SUCCESS CUE The Create New World configuration screen is open.

4 **REPORT**

Set the new world's game mode to Creative. Click the Game Mode button until its displayed value is Creative; the world name, seed, and other settings may remain at their defaults.

INPUT `Click Game Mode until it reads Game Mode: Creative`

SUCCESS CUE The world creation screen displays Game Mode: Creative.

5 **INFERRED**

Create and enter the world.

INPUT `Click Create New World`

SUCCESS CUE The player is in the world and can move normally.

6 **INFERRED**

Wait until initial terrain loading is complete before opening the inventory.

SUCCESS CUE Nearby terrain is rendered, the loading overlay is gone, and player movement responds normally.

7 **REPORT**

Open the Creative inventory using the Inventory control.

INPUT `E`

SUCCESS CUE The Creative inventory GUI is open, showing category tabs, an item grid, and the nine hotbar slots along the bottom.

8 **INFERRED**

Select a Creative category other than Survival Inventory and Search Items. For this deterministic path, select the Combat tab, identifiable by its sword icon. Do not select the Search Items tab because keyboard input there can be captured by the search field.

INPUT Left-click the Combat tab

SUCCESS CUE The Combat tab is selected and its weapons and armor are visible in the item grid; neither Search Items nor Survival Inventory is selected.

9 **INFERRED**

Locate a Diamond Sword in the Combat tab's item grid, using the tooltip shown when hovering if necessary, and pick it up with the cursor. A Diamond Sword is used because it is non-stackable, ensuring the test stack contains exactly one item.

INPUT Left-click the Diamond Sword

SUCCESS CUE A single Diamond Sword icon is attached to the mouse cursor.

10 **INFERRED**

Place the cursor-held Diamond Sword into any empty slot in the hotbar, which is the row of nine slots at the bottom of the Creative inventory GUI.

INPUT Left-click an empty hotbar slot

SUCCESS CUE The selected hotbar slot contains exactly one Diamond Sword, the mouse cursor is no longer holding an item, and the Combat tab remains open.

11 **REPORT**

Move the mouse pointer over the hotbar slot containing the Diamond Sword without clicking or closing the inventory.

INPUT Move pointer over the Diamond Sword hotbar slot

SUCCESS CUE The Diamond Sword's hotbar slot is highlighted under the pointer while the Combat tab remains selected.

12 **REPORT** **TRIGGER**

With the pointer still hovering over the one-item Diamond Sword stack, press the Drop Selected Item key once. Do not hold Left Ctrl for this single-item variant, and do not close the inventory before pressing the key.

INPUT Q

SUCCESS CUE The Q input has been issued while a one-item hotbar stack was hovered and a Creative tab other than Search Items or Survival Inventory remained open.

HANDOFF TO OBSERVATION

The player has just pressed Q once while hovering over the one-item Diamond Sword stack in the hotbar, with the Creative inventory still open on the Combat tab. Begin observation immediately without performing another inventory action.

UNCERTAINTIES

- The report provides two alternative triggers: Q for a one-item stack and Ctrl+Q for a multi-item stack. This plan selects the one-item Q variant because it is the simplest deterministic reproduction; the Ctrl+Q variant is not separately executed.
- The specific Combat tab and Diamond Sword are practical choices. The report permits any Creative tab other than Survival Inventory and Search Items and states that the issue works with any item.
- A new single-player world is used for operational simplicity. The report specifies Creative mode but does not require a particular world, server type, seed, or location.
