

Maps show stone-like pattern despite it not being there

[MC-179858](#) MAPS

Status	Resolved / Fixed
Affected	20w17a
Fixed in	20w18a
Reported	2020-04-22
Mojira category	Maps

REPRODUCTION TARGET

Use version: 20w17a

Affected versions (1):

20w17a

Environment: Minecraft Java Edition, vanilla single-player using two launcher installations: 20w16a to create the pre-upgrade world and filled map, followed by the affected snapshot 20w17a to open the same world. Use the same game directory, or otherwise ensure that the 20w17a installation can access the world created in 20w16a. Creative mode is used only as a practical way to obtain and update a map without crafting or survival requirements.

PRECONDITIONS

- The Minecraft Launcher can start both Java Edition snapshot 20w16a and snapshot 20w17a.
- Snapshot 20w17a must not create the test world; the same world must first exist and contain a filled map in a version from before 20w17a. This plan uses 20w16a, the immediately preceding snapshot, as the deterministic setup version.
- Do not optimize the world with "Erase cached data" and do not use the startup arguments "--forceUpgrade - -eraseCache" before reproducing; the report identifies those operations as repair procedures.
- Use an unmodified vanilla client with no datapacks, mods, or resource packs required by the test.
- Keep a backup of the 20w16a world because opening the working copy in 20w17a upgrades that copy.
- No particular world seed, coordinates, map scale, difficulty, or graphics setting is specified by the report.

STEPS TO REPRODUCE

1 INFERRED

In the Minecraft Launcher, select or create an installation that runs Java Edition snapshot 20w16a, then start the game with that installation.

INPUT Select installation/version "20w16a" and press Play.

SUCCESS CUE The Minecraft main menu is open and displays version 20w16a.

2 INFERRED

Open the single-player world list and begin creating a new world. Give it a recognizable name such as "MC-179858 pre-20w17a" so that the same world can be identified after changing versions.

INPUT Singleplayer -> Create New World; world name: MC-179858 pre-20w17a

SUCCESS CUE The world-creation screen shows the chosen test-world name.

3 INFERRED

Set the world to Creative mode to permit direct access to an Empty Map without crafting, then create the world. Leave the seed and world-generation settings at their defaults.

INPUT Game Mode: Creative -> Create New World

SUCCESS CUE The player has spawned in the new 20w16a world and the Creative-mode hotbar is visible at the bottom of the screen.

4 INFERRED

Wait before interacting until the spawn terrain has rendered and movement responds normally.

SUCCESS CUE Nearby surface terrain is visible, missing chunks are no longer appearing around the player, and movement responds without world-loading pauses.

5 INFERRED

Open the Creative inventory using the inventory action, whose default key is E. Select the Search Items tab, enter "map" in the search field, and place the item specifically labeled "Empty Map" into any hotbar slot. The hotbar is the nine-slot row along the bottom of the screen.

INPUT E; search text: map; move one Empty Map to a hotbar slot

SUCCESS CUE One Empty Map is present in one of the nine hotbar slots.

6 INFERRED

Close the inventory and select the hotbar slot containing the Empty Map. Use the corresponding number key 1 through 9 or scroll the mouse wheel until that slot is highlighted.

INPUT E to close inventory; then the applicable hotbar key 1-9 or mouse wheel

SUCCESS CUE The Empty Map's hotbar slot is highlighted and the player is holding the Empty Map.

7 INFERRED

Use the held Empty Map once with the use-item control, whose default input is right-click. Do this while standing in the loaded Overworld terrain.

INPUT right-click once

SUCCESS CUE The Empty Map has changed into a filled Map, the map is visible in the player's hands, and nearby terrain begins appearing on it.

8 **INFERRED**

Keep the filled Map selected and move around within its coverage area long enough to populate a useful baseline. Walk with W, or double-tap Space to begin Creative flight and then use W. Keep the player marker within the map border and continue until the map contains multiple areas of rendered surface terrain rather than remaining mostly blank.

INPUT W; optionally Space twice to toggle Creative flight

SUCCESS CUE The filled Map remains in the active hotbar slot and shows a substantial area of surface terrain created while the world is still running in 20w16a.

9 **REPORT**

Stop moving while still somewhere covered by the filled Map, then open the pause menu and save the world by returning to the title screen. Do not discard the Map; leave it in the player's inventory or active hotbar slot.

INPUT Esc -> Save and Quit to Title

SUCCESS CUE The game has returned to the title screen after saving the 20w16a world with the filled Map in the player's inventory.

10 **INFERRED**

Close Minecraft completely so the world files are no longer in use.

INPUT Quit Game

SUCCESS CUE The 20w16a game process has closed.

11 **INFERRED**

Create a backup of the saved world before upgrading it. Copy the entire folder for "MC-179858 pre-20w17a" from the active game directory's saves folder to a separate backup location. Do not use the backup copy for the reproduction; retain it as the pre-20w17a source world.

INPUT Copy .minecraft/saves/<test-world-folder> to a separate backup location

SUCCESS CUE There are two copies of the world: the working copy in the game's saves directory and a separate untouched 20w16a backup.

12 **REPORT**

In the Minecraft Launcher, switch to an installation that runs the affected Java Edition snapshot 20w17a and start the game. Ensure this installation uses the game directory containing the working copy of the test world.

INPUT Select installation/version "20w17a" and press Play.

SUCCESS CUE The Minecraft main menu is open and displays version 20w17a.

13 **REPORT**

Open Singleplayer, select the working world named "MC-179858 pre-20w17a", and load it in 20w17a. If Minecraft warns that the world was created in a different version or recommends making a backup, proceed with opening the working copy because a separate backup was already made. Do not choose Optimize World and do not erase cached data.

INPUT

Singleplayer -> select MC-179858 pre-20w17a -> Play Selected World; confirm the version warning if shown

SUCCESS CUE The same world has opened in 20w17a at the player's saved position.

14 **INFERRED**

Wait until the upgraded world is fully ready before updating the Map. Do not continue while chunks are missing or while player movement is unresponsive.

SUCCESS CUE Surrounding terrain has rendered, the player can move normally, and the game is still running version 20w17a.

15 **REPORT**

Locate the pre-existing filled Map in the inventory or hotbar. If necessary, press E, move that filled Map to a hotbar slot, close the inventory, and select its slot using the corresponding number key or mouse wheel.

INPUT

E if needed; move the existing filled Map to the hotbar; E to close; select with hotbar key 1-9 or mouse wheel

SUCCESS CUE The Map created in 20w16a is selected in the active hotbar slot and is visibly held by the player in the 20w17a world.

16 **REPORT** **TRIGGER**

While continuing to hold and view the pre-existing filled Map, walk or fly over the nearby surface that lies within the map's coverage. Use W for several seconds and keep the player marker within the map border so the map actively revisits and updates terrain from the upgraded world.

INPUT

Hold W for several seconds; optionally use Space twice first if Creative flight is needed

SUCCESS CUE The player has moved through previously mapped Overworld terrain in 20w17a while the existing filled Map remained selected and visible.

HANDOFF TO OBSERVATION

The pre-existing filled Map has just been carried across previously mapped surface terrain in the world after that world was upgraded from 20w16a to 20w17a. The Map is still selected and visible; begin observing its rendered contents now.

UNCERTAINTIES

- The issue contains no formal Steps to Reproduce section. The cross-version path is reconstructed from the description and comments stating that worlds from before 20w17a become affected when loaded in 20w17a.
- The report does not designate one exact source version for creating the old world. This plan uses 20w16a as the immediately preceding snapshot and because the supplied issue context explicitly discusses upgrades from 20w16a to 20w17a.
- The description most directly refers to looking at existing maps, while comments also state that newly created maps in an affected upgraded world can exhibit the issue. This plan uses an existing filled Map created before the upgrade because that most closely follows the original description.
- No original world download, seed, coordinates, map identifier, map scale, or required amount of exploration is supplied. The plan therefore creates a small baseline map in an arbitrary 20w16a world and updates it in the same nearby area after upgrading.
- Creative mode is not stated as a requirement. It is selected solely to obtain an Empty Map and traverse terrain deterministically without introducing crafting, resource collection, hunger, or combat.
