

Server-side lag spike sometimes occurs when attempting to locate a buried treasure or opening/breaking a chest containing a map

MC-236740 MAPS

Status	Resolved / Fixed
Affected	21w37a; 21w38a; 21w39a; 21w40a; 21w41a; 21w42a; 21w43a; 21w44a; 1.18 Pre-release 1
Fixed in	1.18 Pre-release 3
Reported	2021-09-15
Mojira category	Maps; World generation

REPRODUCTION TARGET

Use version: 21w37a

Affected versions (9):

21w37a

21w38a

21w39a

21w40a

21w41a

21w42a

21w43a

21w44a

1.18 Pre-release 1

Environment:

Minecraft Java Edition 21w37a, unmodified vanilla client, single-player world using the integrated server, Creative mode, cheats enabled, and structure generation enabled. Use the report's explicitly labeled shipwreck route with seed -1899573754757393022.

PRECONDITIONS

- Install and launch the exact affected snapshot 21w37a rather than the fixed version 1.18 Pre-release 3.
- Create a new world; do not reuse a world that has already generated or opened the target shipwreck chest.
- Use seed -1899573754757393022 exactly, including the leading minus sign.
- Enable Generate Structures so the shipwreck exists at the supplied location.
- Use Creative mode and enable cheats so the supplied teleport command can be executed and the player cannot drown while positioned underwater.
- Do not open or break any chest at the target shipwreck before the trigger step.
- Use the shipwreck teleport route for this execution. The report also supplies other valid routes, but they are not needed for this deterministic plan.

STEPS TO REPRODUCE

1 REPORT

In the Minecraft Launcher, create or select an installation that uses snapshot 21w37a, launch it, and wait for the Minecraft main menu to appear.

INPUT 21w37a

SUCCESS CUE The lower-left version text on the main menu identifies the running game as Minecraft Java Edition 21w37a.

2 INFERRED

Select Singleplayer, then select Create New World. Set the game mode to Creative. Open More World Options and ensure Allow Cheats is ON and Generate Structures is ON.

SUCCESS CUE The new-world screen shows Creative mode, cheats enabled, and structure generation enabled.

3 REPORT

In the Seed for the World Generator field, enter the report's shipwreck seed exactly. Do not omit the minus sign.

INPUT -1899573754757393022

SUCCESS CUE The seed field contains exactly -1899573754757393022.

4 INFERRED

Select Create New World and wait until the player enters the world. Do not continue while the loading screen is visible; wait until terrain is rendered and normal player movement and camera movement respond.

SUCCESS CUE The player is in the newly generated world, terrain is visible, and movement responds normally.

5 INFERRED

Press T, or the currently bound Open Chat control, to open in-game chat.

INPUT T

SUCCESS CUE The chat command-entry field is open and ready for text input.

6 REPORT

Enter the supplied shipwreck teleport command exactly as written, including the leading slash, and press Enter. The final two numbers set the player's yaw and pitch so the player arrives facing the intended area.

INPUT /execute in minecraft:overworld run tp @s 2843.30 60.63 -977.73 255.15 36.00

SUCCESS CUE The command is accepted and the player is teleported to X 2843.30, Y 60.63, Z -977.73 in the Overworld with the nearby shipwreck loading around the player.

7 REPORT

Wait for all teleportation-related loading to finish before interacting with anything. Continue only after the surrounding water, seabed, and shipwreck blocks have rendered, the camera and movement respond normally, and commands can be entered without a loading delay.

SUCCESS CUE The underwater shipwreck area is fully rendered and the integrated server is responsive before the chest interaction.

8 **INFERRED**

Locate the chest at the supplied shipwreck destination. Begin with the view direction established by the teleport command and adjust the camera only as needed to place the crosshair over the nearby chest in the shipwreck. Move only the minimum distance needed to bring it within interaction range. Do not open or break any other chest.

SUCCESS CUE The crosshair is over the unopened target chest at the shipwreck, the chest is within normal interaction range, and the area remains responsive.

9 **REPORT** **TRIGGER**

Use the Use Item/Place Block control—right-click by default—once on the target chest. Do not repeatedly click, break the chest, or trigger additional map chests during this attempt.

INPUT right-click once

SUCCESS CUE A single use-block interaction has just been sent to the target shipwreck chest; no additional player actions have been performed afterward.

HANDOFF TO OBSERVATION

The player has just right-clicked the unopened target chest at the supplied shipwreck coordinates after all teleportation and chunk loading completed. Immediately hand control to the observation subsystem to monitor integrated-server responsiveness and the chest interaction without issuing further inputs.

UNCERTAINTIES

- The report characterizes the condition as intermittent, although the supplied seeds and coordinates are described as particularly good examples. A single clean attempt may therefore not activate the condition.
- The report does not explicitly require a particular game mode. Creative mode is selected only as a practical way to execute the teleport command and prevent underwater drowning without changing the reported chest-opening trigger.
- The report provides multiple valid test locations. This plan selects the explicitly labeled shipwreck at /execute in minecraft:overworld run tp @s 2843.30 60.63 -977.73 255.15 36.00 because it avoids ambiguity about the structure type. Other report-supplied alternatives are seed 5120366084678867272 at /execute in minecraft:overworld run tp @s 1303.51 49.00 4016.70 178.65 27.45 and the underwater ruins in seed -1899573754757393022 at /execute in minecraft:overworld run tp @s 2263.13 41.86 -1161.19 264.75 52.80.
- The report says to open 'the chest' after teleporting but does not provide a block coordinate or an explicit visual description distinguishing that chest from any other shipwreck chest. The supplied position and facing angles are therefore used to identify the intended nearby target.
- Because this is a performance-related reproduction, the plan performs the trigger only once. Restart from a newly created world or an untouched copy of the world if another attempt is required.
