

"FOV Effects" slider incorrectly modifying zoom values on the spyglass

MC - 275249 Camera

Status	Resolved / Fixed
Affected	24w33a
Fixed in	24w34a
Reported	2024-08-15

STEPS TO REPRODUCE

1. Launch Minecraft 24w33a.
2. Create a new Creative world with default settings.
3. Create a four-block-wide gap.
4. Select a spyglass from the Creative inventory.
5. Open Options -> Video Settings and set FOV Effects to 100%.
6. Use the spyglass to zoom across the gap and observe the zoom level.
7. Set FOV Effects to 0% via Options -> Video Settings.
8. Use the spyglass to zoom across the gap.
9. Observe that the spyglass no longer zooms in, unlike when FOV Effects is set to 100%.

OBSERVED BEHAVIOUR

Actual behavior

In Java Edition **24w33a**, the **Video Settings → FOV Effects** slider incorrectly scales the spyglass's zoom effect:

- At **100%**, the spyglass provides its expected zoom level.
- At values below **100%**, the spyglass zoom is reduced proportionally.
- At **0%**, using the spyglass does not provide any noticeable zoom.

This behavior is reproducible in vanilla Minecraft by viewing the same four-block-wide gap through a spyglass at different **FOV Effects** values. In **1.21.1**, the spyglass retains its normal zoom regardless of the slider setting; the regression is therefore present in **24w33a**.

EXPECTED BEHAVIOUR

When viewing through a spyglass, its zoom level should remain consistent regardless of the "FOV Effects" slider setting in Video Settings. Adjusting the slider from 100% to lower values, including 0%, should not reduce or remove the spyglass zoom effect. The spyglass should provide the same magnification as in previous versions, while other FOV effects continue to follow the selected setting.

ENVIRONMENT

Minecraft Java Edition Version 24w33a (snapshot)

ORIGINAL DESCRIPTION

The zoom effect is being effected by the "FOV Effects" slider inside Video settings, which it did not do in previous versions.

Steps to reproduce:

- Adjust the "Video Settings > FOV Effects" slider to 100% and try zoom in with the spyglass
- Adjust "Video Settings > FOV Effects" slider to anything lower than 100%
- Zoom in using the spyglass.

Observed results:

Zoom is directly affected by the FOV Effects slider, such that setting it to 0% causes the spyglass to not zoom in at all.

Expected results:

Spyglass zoom should be unaffected by the FOV Effects slider (as in previous versions).

Everything I have tested has been in vanilla versions of the game, no mods used.

The specific example here that I am using to compare zooms is just me creating a 4 block wide gap and zooming in from one side to the other to directly compare how the block appears. I have attached how setting FOV Effects to 0 appears in 1.21.1 and how it appears in 24w33a. One of my versions is set to windowed, as screenshotting with windows doesn't work properly in 1.21.1, but swapping to full-screen does not change the results.

1.21.1:

24w33a:
