

Sprinting isn't canceled when dismounting rideable entities while sprinting

MC-30403 Camera

Status	Resolved / Fixed
Affected	Minecraft 13w36a, Minecraft 13w36b, Minecraft 1.7.2, Minecraft 1.7.4, Minecraft 14w02b, Minecraft 14w02c (+106 more)
Fixed in	Minecraft 14w34d, 22w44a, 23w03a
Reported	2013-09-07

STEPS TO REPRODUCE

1. Create or open a Minecraft world.
2. Spawn a pig.
3. Equip the pig with a saddle.
4. Mount the saddled pig.
5. Hold the sprint key while moving forward.
6. Dismount the pig while still holding the sprint key.
7. Slow down after dismounting.
8. Observe that the sprinting state remains active, indicated by the changed field of view.

OBSERVED BEHAVIOUR

After dismounting a rideable entity while sprinting, the player's sprinting state remains active instead of being cleared. The player may slow down or stop moving, but the sprinting visual effect - such as the increased field of view - persists. Sprinting is only cleared after the player manually toggles sprinting off and on again while moving forward.

EXPECTED BEHAVIOUR

After dismounting a rideable entity while sprinting, the player should leave the sprinting state normally when they slow down. The sprinting indication, including the associated field-of-view change, should reset without requiring the player to stop and manually start sprinting again. This behavior should be consistent for rideable entities such as saddled pigs.

ORIGINAL DESCRIPTION

The Bug:

Sprinting isn't canceled when dismounting rideable entities while sprinting.

When dismounting a rideable entity while you're sprinting, your sprinting state doesn't reset; you'll need to stop and start sprinting again in order to reset it.

Steps to Reproduce:

- Spawn a saddled pig, mount it, and hold the sprint key.
- Dismount the pig while sprinting and take note of how you're still in the sprinting state (as indicated by the change in FOV) even if you slow down.
- Stop and start sprinting again by pressing the sprint key moving and forwards before stopping.
- Take note of how sprinting is now canceled (as indicated by the change in FOV).

Observed Behavior:

Players continue to sprint after dismounting entities even if you slow down.

Expected Behavior:

Players would stop sprinting after dismounting entities when they slow down.
