

You can retain entities' shaders by running the "/kill" command while in spectator mode

MC-46503 Camera

Status	Resolved / Fixed
Affected	Minecraft 14w05a, Minecraft 14w34d, Minecraft 1.8, Minecraft 1.8.1-pre3, Minecraft 1.8.8, Minecraft 1.9.3 Pre-Release 1 (+58 more)
Fixed in	Minecraft 14w05b, Minecraft 15w45a, 25w33a
Reported	2014-01-30

STEPS TO REPRODUCE

1. Summon a creeper.
2. Switch into spectator mode.
3. Begin spectating the creeper.
4. Run the `/kill` command on yourself.
5. Respawn.
6. Observe your surroundings and check whether the creeper's shader is retained.

OBSERVED BEHAVIOUR

After spectating the creeper, running `/kill` on the spectator, and respawning, the entity shader associated with the spectated entity remains active. The shader is not cleared when the player dies or leaves spectator mode, so entity rendering continues to use the retained shader after respawn.

EXPECTED BEHAVIOUR

After using `/kill` while spectating an entity and respawning, the entity's shader should not remain active or be retained by the player's view. The surrounding entities should appear with their normal rendering, without the previously observed shader effect persisting after the spectator session ends.
