

Kicked for flying while flying happy ghastr

MC - 296366 Dedicated Server

Status	Resolved / Fixed
Affected	25w15a
Fixed in	25w16a
Reported	2025-04-08

STEPS TO REPRODUCE

1. Join a server with `allow-flight` set to `false` in `server.properties` (the default).
2. Harness a happy ghastr.
3. Fly around on the happy ghastr.
4. Wait a few seconds.
5. Observe that the player is kicked with the reason "Flying is not enabled on this server" and that the console shows "Player was kicked for floating a vehicle too long!".

OBSERVED BEHAVIOUR

On a server with `allow-flight=false`, a player riding a harnessed Happy Ghastr is disconnected after flying for several seconds. The client displays:

> Flying is not enabled on this server

The server console logs:

> Player was kicked for floating a vehicle too long!

This occurs while the player is legitimately riding and flying the Happy Ghastr, including when the player is not in Survival mode.

EXPECTED BEHAVIOUR

When a player is harnessing and flying on a happy ghastr, the server should recognize the movement as valid vehicle travel and allow the player to remain connected. The player should not be kicked for flying or floating a vehicle, and the "Flying is not enabled on this server" message should not appear, even when allow-flight is disabled.

ENVIRONMENT

Minecraft Java Edition Version 25w15a (snapshot)

ORIGINAL DESCRIPTION

Steps to Reproduce:

- Join a server with allow-flight in server.properties set to false (default).
- Harness a happy ghastr and fly around on it (you do not have to be in Survival).
- After a few seconds, you should get kicked for flying.

Observed Results:

The player gets kicked for the reason "Flying is not enabled on this server" and the console shows "Player was kicked for floating a vehicle too long!".

Expected Results:

The player would not be kicked.
