

Command feedback for successful `/ban` and `/ban-ip` commands with no specified reason can't be sent to the client

MC-301870 Dedicated Server

Status	Resolved / Fixed
Affected	25w36b
Fixed in	25w37a
Reported	2025-09-04

STEPS TO REPRODUCE

1. Start a Minecraft server using `server-25w36b.jar`.
2. Connect an operator client to the server.
3. Connect a second player client to the server.
4. From the operator client, execute `/ban <second player's name>` without specifying a reason.
5. Observe that the ban is applied, but the client displays an error indicating that the chat message cannot be delivered.
6. From the operator client, execute `/ban-ip 1.1.1.1` without specifying a reason.
7. Observe that the IP ban is applied, but the client displays `Can't deliver chat message; check server logs: Banned IP 1.1.1.1: null`, while the server console logs an error encoding the `clientbound/minecraft:system_chat` packet.

OBSERVED BEHAVIOUR

Actual behavior

In Minecraft Java Edition snapshot `25w36b`, executing `/ban` or `/ban-ip` without providing an optional reason successfully applies the ban, but the command's success feedback cannot be delivered to the executing client.

The server attempts to send a system chat message using a translation component whose reason argument is `null`, for example:

```
```text
translation{key='commands.banip.success', args=[1.1.1.1, null]}
```
```

This causes the `clientbound/minecraft:system_chat` packet to fail encoding. The client displays:

```
```text
Can't deliver chat message; check server logs: Banned IP 1.1.1.1: null
```
```

An `EncodingException` is also logged by the server. The ban itself is applied correctly; only the success feedback fails to reach the client. Commands such as `/op` do not exhibit this issue.

EXPECTED BEHAVIOUR

When `/ban` or `/ban-ip` is executed successfully without a specified reason, the command should apply the ban and deliver the appropriate success confirmation to the issuing client, without displaying a chat delivery error or producing an encoding error in the server logs. The feedback should remain valid when the reason is omitted, as it does for other successful commands such as `/op`.

ENVIRONMENT

Minecraft Java Edition Version 25w36b (snapshot)

ORIGINAL DESCRIPTION

When using the `/ban` and `/ban-ip` commands, an error message is shown in the chat and logs, but the ban works correctly. Other commands like `/op` work correctly.

Error message in the chat: `Can't deliver chat message; check server logs: Banned IP 1.1.1.1: null`

Full Log: <https://mclo.gs/XOQg6EW>

Error message in console:

```
[17:51:33] [Netty Epoll Server IO #1/ERROR]: Error sending packet clientbound/minecraft:system_chat
io.netty.handler.codec.EncoderException: Failed to encode packet 'clientbound/minecraft:system_chat'
