

Launched falling_block entities do not travel through portals

MC-9644 Entities

Status	Resolved / Fixed
Affected	Snapshot 13w06a, Minecraft 1.5, Snapshot 13w11a, Minecraft 1.5.1, Minecraft 1.5.2, Snapshot 13w18c (+33 more)
Fixed in	24w19a
Reported	2013-02-11

STEPS TO REPRODUCE

1. Enter a Creative world.
2. Execute `/setblock ~ ~ ~3 nether_portal`` to place a Nether portal block above the ground.
3. Execute `/setblock ~ ~ ~2 ~3 sand`` to place a gravity-affected block above the portal block.
4. Wait until the sand finishes falling.
5. Observe that the sand falls straight through the Nether portal block.
6. Observe that the sand lands on the other side without being transported to or from the Nether.

OBSERVED BEHAVIOUR

Actual behavior

The gravity-affected block becomes a `falling_block`` entity, but entering a Nether portal does not transfer it to the other dimension. The entity passes through the `nether_portal`` block without being affected by the portal and continues falling in the same dimension until it lands.

The same occurs when the falling block has horizontal velocity, such as an anvil launched by a TNT and redstone cannon: it travels through the portal blocks rather than being transported to the Nether.

EXPECTED BEHAVIOUR

A falling gravity-affected block, such as an anvil or sand, should interact with a Nether portal while passing through it and be transported to the corresponding location in the other dimension, rather than passing through the portal blocks as though they were absent. Its motion should continue appropriately after the transition, consistent with other moving entities that travel through portals.

ENVIRONMENT

Minecraft Java Edition Versions: 13w06a, 1.5, 13w11a, 1.5.1, 1.5.2, 13w18c, 13w19a, 1.8, 1.8.1-pre3, 1.10.2, 16w42a, 1.12.2, 1.13-pre3, 1.15.2, 20w21a, 1.16 Release Candidate 1, 1.16, 1.16.2, 20w51a, 21w03a, 1.16.5, 21w05b, 21w06a, 21w07a, 21w08b, 21w11a, 21w15a, 21w17a, 1.17, 1.17.1, 1.19, 1.19.2, 1.19.3, 1.19.4, 1.20 Release Candidate 1, 1.20, 1.20.1, 1.20.4, 1.20.5 Release Candidate 1 (includes snapshots)

ORIGINAL DESCRIPTION

I made an anvil-launching cannon with TNT and redstone.

What I expected to happen was the anvil would be sent into the nether like an arrow or other moving entity.

What actually happened was the anvil passed through the portal blocks as if they weren't there and landed on the other side.

How to reproduce

- Place a nether portal block (make sure it is not on the ground)

`/setblock ~ ~ ~3 nether_portal`

- Place a gravity-affected block above it

`/setblock ~ ~ ~2 ~3 sand`

→ The block falls straight through the nether portal block without being transported to/from the nether
