

Sculk sensors are not activated upon placing food onto campfires

MC - 209701 Game Events

Status	Resolved / Fixed
Affected	20w51a, 21w03a, 21w05a, 21w05b, 21w06a, 21w07a (+27 more)
Fixed in	1.19 Pre-release 2
Reported	2020-12-27

STEPS TO REPRODUCE

1. Launch Minecraft 1.18.2.
2. Create or enter a world.
3. Place a campfire.
4. Place a sculk sensor nearby.
5. Place food onto the campfire.
6. Observe whether the sculk sensor activates.

OBSERVED BEHAVIOUR

When a player successfully places a valid cookable food item onto a campfire, the food is added to the campfire and its contents visibly change. However, this interaction does not emit a game event/vibration at the campfire's position. Consequently, a nearby sculk sensor does not detect the food-placement interaction and remains inactive, provided no other vibration is generated. This occurs even when the sensor is within its normal detection range and has a clear path to the campfire.

EXPECTED BEHAVIOUR

When food is placed onto a campfire, any nearby sculk sensor should detect the interaction as a vibration and activate accordingly. The sensor should respond consistently with other detectable actions, allowing it to produce its normal redstone signal when the campfire's contents change.

ENVIRONMENT

Minecraft Java Edition Versions: 20w51a, 21w03a, 21w05a, 21w05b, 21w06a, 21w07a, 21w08b, 21w10a, 21w14a, 21w15a, 21w17a, 21w19a, 21w20a, 1.17 Pre-release 1, 1.17 Pre-release 3, 1.17 Pre-release 5, 1.17 Release Candidate 1, 1.17 Release Candidate 2, 1.17, 1.17.1 Pre-release 1, 1.17.1 Pre-release 3, 1.17.1, 21w38a, 21w41a, 21w43a, 1.18, 1.18.1, 22w05a, 1.18.2, 22w14a, 22w17a, 22w18a, 1.19 Pre-release 1 (includes snapshots)

ORIGINAL DESCRIPTION

The Bug:

Sculk sensors are not activated upon placing food onto campfires.

Steps to Reproduce:

- Place down a campfire.
- Place down a sculk sensor nearby and place some food onto the campfire.
- Take note as to whether or not sculk sensors are activated upon placing food onto campfires.

Observed Behavior:

Sculk sensors are not activated upon placing food onto campfires.

Expected Behavior:

Sculk sensors would be activated upon placing food onto campfires.

Code Analysis:

Code analysis by Avoma can be found below.

The following is based on a decompiled version of Minecraft 1.18.2 using MCP-Reborn.

`net.minecraft.world.level.block.CampfireBlock.java`

```

public class CampfireBlock extends BaseEntityBlock implements SimpleWaterloggedBlock {
...
public InteractionResult use(BlockState $bs, Level $l, BlockPos $bp, Player $p, InteractionHand $ih, BlockHitResult $bhr) {
BlockEntity blockentity = $l.getBlockEntity($bp);
if (blockentity instanceof CampfireBlockEntity) {
CampfireBlockEntity campfireblockentity = (CampfireBlockEntity)blockentity;
ItemStack itemstack = $p.getItemInHand($ih);
Optional<CampfireCookingRecipe> optional = campfireblockentity.getCookableRecipe(itemstack);
if (optional.isPresent()) {
if (!$l.isClientSide && campfireblockentity.placeFood($p.getAbilities().instabuild ? itemstack.copy() : itemstack, optional.get().getCookingTime())) {
$p.awardStat(Stats.INTERACT_WITH_CAMPFIRE);
return InteractionResult.SUCCESS;
}
}
}
}

```

If we look at the above class, we can see that placing food onto campfires simply isn't registered as a game event as the `gameEvent()` method is never called, thus not detecting this action as a vibration.

Potential Fix:

Simply calling the `gameEvent()` method where appropriate within this piece of code should resolve this problem. The "BLOCK_CHANGE" game event tag would be expected to be used here as campfires are visually changed when food is placed onto them. The following line of code could be used in order to fix this:

```
$LEVEL.gameEvent($PLAYER, GameEvent.BLOCK_CHANGE, $BLOCKPOS);
```
