

Sculk sensors are not activated upon harvesting sweet berry bushes

MC-210496 Game Events

Status	Resolved / Fixed
Affected	20w51a, 21w03a, 21w05a, 21w05b, 21w06a, 21w07a (+23 more)
Fixed in	1.19 Pre-release 2
Reported	2021-01-04

STEPS TO REPRODUCE

1. Enter a Minecraft world.
2. Place a sweet berry bush.
3. Apply bone meal to the sweet berry bush until berries are visible on it.
4. Place a sculk sensor nearby.
5. Harvest the sweet berry bush.
6. Observe that the sculk sensor is not activated by harvesting the sweet berry bush.

OBSERVED BEHAVIOUR

Harvesting a mature sweet berry bush does not activate nearby sculk sensors. Although harvesting changes the bush's `AGE` property from a berry-producing state to `AGE = 1`, drops sweet berries, and plays the harvesting sound, the interaction does not emit a `GameEvent`.

Because no vibration-related game event is generated for the block state change, nearby sculk sensors do not detect the harvest or produce a redstone signal.

EXPECTED BEHAVIOUR

When ripe sweet berry bushes are harvested, nearby sculk sensors should detect the interaction as a vibration and activate normally. The sensor should respond consistently when the bush's berries are picked, allowing the harvesting action to trigger sculk-based mechanisms in the same way as other detectable interactions.

ENVIRONMENT

Minecraft Java Edition Versions: 20w51a, 21w03a, 21w05a, 21w05b, 21w06a, 21w07a, 21w08b, 21w10a, 21w11a, 21w14a, 21w15a, 21w17a, 21w19a, 21w20a, 1.17 Pre-release 1, 1.17 Release Candidate 1, 1.17, 1.17.1 Pre-release 1, 1.17.1 Release Candidate 1, 1.17.1, 21w37a, 21w38a, 1.18, 1.18.1, 22w05a, 1.18.2, 22w14a, 22w18a, 1.19 Pre-release 1 (includes snapshots)

ORIGINAL DESCRIPTION

The Bug:

Sculk sensors are not activated upon harvesting sweet berry bushes.

Steps to Reproduce:

- Place down a sweet berry bush.
- Apply bone meal to it until berries can be seen on the bush.
- Place down a sculk sensor nearby.
- Harvest the sweet berry bush.
- Take note as to whether or not sculk sensors are activated upon harvesting sweet berry bushes.

Observed Behavior:

Sculk sensors are not activated upon harvesting sweet berry bushes.

Expected Behavior:

Sculk sensors would be activated upon harvesting sweet berry bushes.

Code Analysis:

Code analysis by Avoma can be found below.

The following is based on a decompiled version of Minecraft 1.18.2 using MCP-Reborn.

net.minecraft.world.level.block.SweetBerryBushBlock.java

```
public class SweetBerryBushBlock extends BushBlock implements BonemealableBlock {  
    ...  
    public InteractionResult use(BlockState $bs, Level $l, BlockPos $bp, Player $p, InteractionHand $ih, BlockHitResult $bhr) {  
        int i = $bs.getValue(AGE);  
        boolean flag = i == 3;  
        if (!flag && $p.getItemInHand($ih).is(Items.BONE_MEAL)) {  
            return InteractionResult.PASS;  
        } else if (i > 1) {  
            int j = 1 + $l.random.nextInt(2);  
            popResource($l, $bp, new ItemStack(Items.SWEET_BERRIES, j + (flag ? 1 : 0)));  
            $l.playSound((Player)null, $bp, SoundEvents.SWEET_BERRY_BUSH_PICK_BERRIES, SoundSource.BLOCKS, 1.0F, 0.8F + $l.random.nextFloat() * 0.4F);  
            $l.setBlock($bp, $bs.setValue(AGE, Integer.valueOf(1)), 2);  
            return InteractionResult.sidedSuccess($l.isClientSide);  
        } else {  
            return super.use($bs, $l, $bp, $p, $ih, $bhr);  
        }  
    }  
    ...  
}
```

If we look at the above class, we can see that harvesting berries from sweet berry bushes simply isn't registered as a game event as the `gameEvent()` method is never called, thus not detecting this action as a vibration.

Potential Fix:

Simply calling the `gameEvent()` method where appropriate within this piece of code should resolve this problem. The "BLOCK_CHANGE" game event tag would work nicely in this instance here as the block states of sweet berry bushes are changed when they're harvested. The following line of code could be used in order to fix this:

```
$LEVEL.gameEvent($PLAYER, GameEvent.BLOCK_CHAN
```
