

Dispensed boats and rafts get stuck inside of dispensers used to place them

MC-1310 Hitboxes

Status	Resolved / Fixed
Affected	Minecraft 1.4.2, Minecraft 1.4.5, Snapshot 13w05b, Snapshot 13w10a, Minecraft 1.6.2, Minecraft 1.7.4 (+115 more)
Fixed in	Minecraft 15w47a, 1.20 Pre-release 2
Reported	2012-10-30

STEPS TO REPRODUCE

1. Build the setup shown in the attached `setup.png`.
2. Place a boat inside the dispenser.
3. Press F3 + B to enable entity hitboxes.
4. Use the lever to activate the dispenser.
5. Look closely at the point where the dispensed boat contacts the dispenser.
6. Observe that the boat gets stuck inside the dispenser.

OBSERVED BEHAVIOUR

When the dispenser is activated with a boat or raft inside, the watercraft is spawned too close to the dispenser's front face. Its entity hitbox partially intersects the dispenser, causing the boat or raft to become lodged inside the dispenser rather than being placed fully in front of it. With entity hitboxes enabled, the overlap between the watercraft and the dispenser is clearly visible.

EXPECTED BEHAVIOUR

When activated, the dispenser should place boats and rafts slightly farther forward so they fully exit the dispenser and do not become lodged inside or intersect with it. The dispensed vehicle should remain usable and unobstructed after placement, with its position clear of the dispenser's opening.

ORIGINAL DESCRIPTION

The Bug:

Dispensed boats and rafts get stuck inside of dispensers used to place them.

Steps to Reproduce:

- Build the setup as shown in the attachment below. setup.png
- Place a boat inside the dispenser.
- Enable entity hitboxes by pressing "F3 + B".
- Use the lever to activate the dispenser.

- Look closely at where the boat comes in contact with the dispenser.
- Take note as to whether or not dispensed boats and rafts get stuck inside of dispensers used to place them.

Observed Behavior:

Dispensed boats and rafts get stuck inside of dispensers used to place them.

Expected Behavior:

Dispensed boats and rafts would not get stuck inside of dispensers used to place them. They should be dispensed a bit more forward in order to avoid this issue from occurring.
