

Pink Petals hitbox does not adjust to contents

MC-260054 Hitboxes

Status	Resolved / Fixed
Affected	23w07a, 23w13a
Fixed in	23w31a
Reported	2023-02-15

STEPS TO REPRODUCE

1. Launch Minecraft 23w07a and create a Creative world with default settings.
2. Place one turtle egg in a block space.
3. Place a second turtle egg in the same block space.
4. Place one sea pickle in a block space.
5. Place a second sea pickle in the same block space.
6. Place one candle in a block space.
7. Place a second candle in the same block space.
8. Place one pink petals block in a block space.
9. Place a second pink petals block in the same block space.
10. Observe that the turtle egg, sea pickle, and candle hitboxes expand after the second instance is added, while the pink petals hitbox remains unchanged.

OBSERVED BEHAVIOUR

Actual behavior

Turtle eggs, sea pickles, and candles expand their collision/selection shape when a second unit is added to the block space. Pink petals do not: after placing a second pink petals unit, the block's appearance and count update, but its hitbox remains the same size and shape as that of a single pink petals unit. The hitbox also remains unchanged for higher counts, up to the block's maximum of four units.

EXPECTED BEHAVIOUR

When additional pink petals are placed in the same block space, their hitbox should dynamically expand to accommodate the increased number of petals, just as it does for turtle eggs, sea pickles, and candles. The hitbox should accurately reflect the current contents rather than remaining unchanged when a second instance is added.

ENVIRONMENT

Minecraft Java Edition Versions: 23w07a, 23w13a (includes snapshots)

ORIGINAL DESCRIPTION

The bug

23w07a introduces pink petals, a block which can have up to four instances of itself placed in a single block space. This puts it in a family also inhabited by turtle eggs, sea pickles and candles.

Turtle eggs, sea pickles and candles start out with a small hitbox when they contain one instance, and this hitbox expands dynamically to accommodate an increased number of units within. However, for the pink petals block, this hitbox will remain constant regardless of how many are inside of it.

How to reproduce

- Place one turtle egg
- Place a second turtle egg in that block space
- Place one sea pickle
- Place a second sea pickle in that block space
- Place one candle
- Place a second candle in that block space

- Place one pink petals
- Place a second pink petals in that block space

Expected results

When the second instance is added, each of the blocks would change their hitbox.

Actual results

This is true of the first three, but not of the fourth.
